

Clinical trial results:

Efficacy of zinc on human hepatic copper uptake: A randomized intervention study

Summary

EudraCT number	2019-000905-57
Trial protocol	DK
Global end of trial date	01 October 2020

Results information

Result version number	v1 (current)
This version publication date	07 October 2021
First version publication date	07 October 2021

Trial information

Trial identification

Sponsor protocol code	N/A
-----------------------	-----

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	Department of Hepatology & Gastroenterology
Sponsor organisation address	Palle Juul-Jensens Boulevard 99, Aarhus N, Denmark, 8200
Public contact	Thomas Sandahl, Aarhus University Hospital , thomsand@rm.dk
Scientific contact	Thomas Sandahl, Aarhus University Hospital , thomsand@rm.dk

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 January 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	25 September 2020
Global end of trial reached?	Yes
Global end of trial date	01 October 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the efficacy of zinc on blocking human gut copper uptake in relation to the type of zinc (zinc acetate/zinc gluconate) and the dose regimen (once a day/ thrice a day). This is quantified by ⁶⁴CuCl₂ PET/CT scans.

Protection of trial subjects:

Blood samples to exclude unknown liver/kidney disease at inclusion

Medical observation for at least 30 minutes after tracer intake

Medical observation during scans including stethoscopy and blood pressure before and after the scan

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	30 May 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 40
Worldwide total number of subjects	40
EEA total number of subjects	40

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	27
From 65 to 84 years	13
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were included from the 30th of May 2019 to the 28th of January 2020 by advertisements at the hospital, on a trial participant recruitment website and in a local newspaper.

Pre-assignment

Screening details:

Interested volunteers would send an e-mail and have the participant information forwarded. If still interested after reading this, they would receive a phone call to set a date for the inclusion conversation.

Pre-assignment period milestones

Number of subjects started	40
Number of subjects completed	40

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Zinc acetate 50 mg x 3

Arm description:

Control treatment

Arm type	Active comparator
Investigational medicinal product name	Wilzin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

50 mg thrice daily, one hour fast before and after oral intake

Arm title	Zinc acetate 150 mg x 1
------------------	-------------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Wilzin
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

150 mg once daily, one hour fast before and after oral intake

Arm title	Zinc gluconate 50 mg x 3
------------------	--------------------------

Arm description: -

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Zink "Natur-Drogeriet"

Number of subjects included in analysis	37
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.15
Method	ANOVA

Primary: Noninferiority test

End point title	Noninferiority test ^[1]
-----------------	------------------------------------

End point description:

Difference between means (standard treatment vs. test treatment)

Non-inferiority margin of 25% (based on the lower 95% confidence interval around the estimated difference between standard treatment and no treatment and a clinical judgement about how much of the margin should be preserved).

End point type	Primary
----------------	---------

End point timeframe:

PET data was analysed through out the study. The analysis was performed after all data was collected.

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The noninferiority test compares test treatments against standard treatment, thus no values are appropriate for standard treatment baseline arm

End point values	Zinc acetate 150 mg x 1	Zinc gluconate 50 mg x 3	Zinc gluconate 150 mg x 1

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 November 2019	We added an additional treatment arm with zinc gluconate 50 mg x 3 daily (10 participants). This to be able to compare the zinc formula if taken thrice daily similar to the control treatment. Furthermore, a plasma zinc sample on all remaining participants was added. This to investigate if the variance in effect of zinc on hepatic copper uptake could be explained by zinc levels. The amendment was not considered to modify any ethical considerations.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
