

Clinical trial results:

The ultrasound-guided multiple-injection costotransverse block for mastectomy and primary reconstructive surgery. A double blind, randomised, placebo controlled trial.

Summary

EudraCT number	2019-001016-35
Trial protocol	DK
Global end of trial date	08 December 2021

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 August 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 December 2021
Global end of trial reached?	Yes
Global end of trial date	08 December 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

We wish to conduct a randomized, placebo controlled and double blind study, comparing the effect of the ultrasound-guided multiple-injection costotransverse block (MICB) vs. placebo. Our aim with this study is to investigate the efficacy of the MICB vs. placebo in patients undergoing unilateral mastectomy and primary reconstructive surgery due to breast cancer. Our hypothesis is, that the unilateral MICB will significantly reduce the opioid consumption during the first 24 postoperative hours and significantly reduce the Numerical Rating Scale pain score (0-10) and opioid related side effects.

Protection of trial subjects:

The patients were randomized and blinded to the intervention. They were closely followed-up 24 hrs postoperatively at the ward and until 14 days post surgery. The trial included a follow-up 1 year after surgery.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 June 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	1 Years
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 36
Worldwide total number of subjects	36
EEA total number of subjects	36

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	34
From 65 to 84 years	2
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Female patients

breast cancer

American Society of Anesthesiologists (ASA) physical status II and III

≥18 years

Scheduled for unilateral subpectoral implant-based primary breast reconstruction

Pre-assignment period milestones

Number of subjects started	35 ^[1]
Number of subjects completed	35

Notes:

[1] - The number of subjects reported to have started the pre-assignment period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: We aimed at 36 participating patients. During the trial period one patient in the active group was randomized but she was omitted completely from the study because she had a changed indication for surgery shortly before blockade. Thereby, she was randomized but did NOT receive any intervention.

Period 1

Period 1 title	Trial period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Active

Arm description:

Ropivacaine

Arm type	Active comparator
Investigational medicinal product name	Ropivacaine
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Infiltration

Dosage and administration details:

50 mg at three thoracic levels (in total 150mg) within the intertransverse tissue complex.

Arm title	Placebo
------------------	---------

Arm description:

Saline

Arm type	Placebo
Investigational medicinal product name	Saline, isotonic
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Infiltration

Dosage and administration details:

10 ml isotonic Saline was injected at three thoracic levels (in total 30 ml) within the intertransverse tissue complex

Number of subjects in period 1^[2]	Active	Placebo
Started	17	18
Completed	17	18

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: We aimed at 36 participating patients. During the trial period one patient in the active group was randomized but she was omitted completely from the study because she had a changed indication for surgery shortly before blockade. Thereby, she was randomized but did NOT receive any intervention.
