

Clinical trial results:

An open-label, multicenter, extension study to evaluate the long-term safety and tolerability of LOU064 in eligible subjects with CSU who have participated in CLOU064A2201

Summary

EudraCT number	2019-001074-29

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	09 September 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	09 September 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial is to assess the long-term safety and tolerability of LOU064 in patients with CSU who have participated in Study CLOU064A2201

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy:

Background therapy was a second generation H1-antihistamine at a locally approved licensed posology given with a stable treatment regimen. Administration/discontinuation of the background H1-antihistamine was at the discretion of the investigator. Background therapy could not be taken from Day 1 until Week 4 of the Treatment period. It could be re-initiated at Week 4 if deemed necessary. Rescue therapy was a second generation H1-antihistamine at a locally approved licensed posology that was eliminated primarily via renal excretion (e.g. cetirizine, levocetirizine or bilastine). The rescue H1-antihistamine had to differ from the background H1-antihistamine and could only be given to treat unbearable symptoms (itch) of CSU on a day-to-day basis.

Evidence for comparator: -

Actual start date of recruitment	24 October 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 10
Country: Number of subjects enrolled	Canada: 21
Country: Number of subjects enrolled	Czechia: 10
Country: Number of subjects enrolled	Spain: 19
Country: Number of subjects enrolled	France: 10
Country: Number of subjects enrolled	Hungary: 12
Country: Number of subjects enrolled	Japan: 40
Country: Number of subjects enrolled	Poland: 35
Country: Number of subjects enrolled	Russian Federation: 20
Country: Number of subjects enrolled	Turkey: 6
Country: Number of subjects enrolled	United States: 23
Country: Number of subjects enrolled	Belgium: 4
Country: Number of subjects enrolled	Denmark: 5

Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	Slovakia: 8
Worldwide total number of subjects	229
EEA total number of subjects	103

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	203
From 65 to 84 years	26
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

229 subjects were enrolled in the observational period or the treatment period across 72 sites in 15 countries.

One subject was a screening failure and, as a result, was not enrolled in either the observational or treatment period.

Pre-assignment

Screening details:

Participants with $UAS7 < 16$ at Week 16 of CLOU064A2201 (NCT03926611) entered a 12-week observational period.

Participants with $UAS7 \geq 16$ at Week 12 or Week 16 of CLOU064A2201, as well as those who relapsed during the observational period, entered the treatment period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	All participants
-----------	------------------

Arm description:

Participants with $UAS7 < 16$ at Week 16 of CLOU064A2201 were followed up to 12 weeks without receiving treatment (observational period). If participants relapsed ($UAS7 \geq 16$ at least once), they were transitioned to the treatment period. Participants with a $UAS7 \geq 16$ at Week 12 or Week 16 in the CLOU064A2201, as well as participants who experienced a relapse during the 12-week observational period, were administered 100 mg of LOU064 b.i.d. open-label for up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	LOU064
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants with a $UAS7 \geq 16$ at Week 12 or Week 16 in the CLOU064A2201, as well as participants who experienced a relapse during the 12-week observational period, were administered LOU064 50mg capsules b.i.d. (i.e. two capsules of LOU064 50mg in the morning and two capsules of LOU064 50mg in the evening) from Day 1 up to Week 52 of the Treatment period.

Number of subjects in period 1	All participants
Started	229
Treatment-free Cohort	68 ^[1]
Treatment Cohort	194
Completed	188
Not completed	41
Physician decision	2
Subject Decision	13

Adverse event, non-fatal	11
Pregnancy	1
Covid-19 situation	2
Lost to follow-up	1
Lack of efficacy	11

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: This is a sub-group of participants (i.e. participants who entered the treatment free cohort)

Baseline characteristics

Subject analysis set description: Participants with a UAS7≥16 at Week 12 or Week 16 in the CLOU064A2201, as well as participants who experienced a relapse during the 12-week observational period, were administered 100 mg of LOU064 b.i.d. open-label for up to 52 weeks.	

Primary: Number of participants with treatment-emergent Adverse Events (AEs)

End point title	Number of participants with treatment-emergent Adverse Events (AEs) ^[1]
End point description: An AE refers to any undesirable medical occurrence, such as an unintended sign (including abnormal laboratory findings), symptom, or disease, experienced by a participant. Serious AEs (SAEs) is defined as any AE that results in death, is life-threatening, requires hospitalization or prolongation of existing hospitalization, results in persistent or significant disability/incapacity, results in a congenital anomaly/birth defect, or any other medically significant condition. Treatment-emergent AEs were defined as AEs that either begin on the same day or after the first dose of study medication during the treatment period in the extension study or worsen on the same day or after the first dose of study medication in the extension study and within the minimum of either 28 days post last dose or the end of the study visit. The number of participants with treatment-emergent AEs was summarized.	
End point type	Primary
End point timeframe: From first dose of treatment up to 28 days after last dose, assessed up to 56 weeks	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: No statistical analyses were planned for the primary endpoint	

End point values	Treated cohort

Secondary: Change from baseline in weekly Urticaria Activity Score (UAS7) at Week 4 of the treatment period

End point title	Change from baseline in weekly Urticaria Activity Score (UAS7) at Week 4 of the treatment period
-----------------	--

End point description:

The Urticaria Activity Score (UAS) is a composite, diary-recorded score with numeric severity intensity ratings (0=none to 3=intense/severe) for the number of wheals (hives) and the intensity of the pruritus (itch) over the past 12 hours (twice daily). The daily UAS is calculated as the average of the morning and evening scores. The UAS7 is the weekly sum of the daily UAS, which is the composite score of the intensity of pruritus and the number of wheals. UAS7 scores ranged from 0 to 42. A higher UAS7 indicated greater urticaria disease activity. A minimum of 4 out of 7 daily scores were needed to calculate the UAS7 values. Otherwise, the weekly score was missing for that week.

The change from baseline in UAS7 at Week 4 of the treatment period was calculated. A negative change score from baseline indicates improvement. The UAS7 at baseline was considered as the UAS7 derived over the last 7 days before day 1 of the treatment period.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Treated cohort: AEs from first dose to 28 days post last dose, up to 56 weeks; deaths until end of study, up to 68 weeks.

Treatment-free cohort: AEs and deaths from start of observation period until relapse or end of observation period, up to 12 weeks

Adverse event reporting additional description:

An AE refers to any undesirable medical occurrence, such as an unintended sign (including abnormal laboratory findings), symptom, or disease, experienced by a participant.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
02 October 2019	The main purpose of this amendment was to address requests from health authorities and to align eligibility criteria of this study with amended eligibility criteria of the preceding core study (Study CLOU064A2201): Deletion of inclusion criterion #4 (this change triggered several changes throughout the document, including changing the study title, modification of inclusion criterion #3 and deletion of the 2nd interim analysis). Lowering the minimum required resting heart rate to 50 bpm (from 60 bpm) to align with amended exclusion criterion #6b in Study CLOU064A2201. This also aligned the eligibility criterion for resting heart rate with normal resting heart rates of CSU patients and did not impact patient safety as LOU064 does not have a negative chronotropic effect. Clarification that investigators needed to assess the benefit-risk ratio for each subject throughout the study. Both, lack of or inadequate treatment response and/or emergence of adverse events that outweighed the benefits, could lead to study treatment discontinuation. Added urine pregnancy testing every 4 weeks with at home assessments between study visits for women of childbearing potential starting after the Week 20 visit of the treatment period.
05 April 2021	The main purpose of this amendment was to implement two changes related to the addition of optional interim analyses and the removal of the male contraception requirement. Updated the statistical analysis section to allow additional optional interim analyses, with the purpose to enable further benefit-risk assessment to support clinical trials in other indications under development and/or potential Health Authority interactions and requests. The requirement for male contraception in this study was removed following the reproductive toxicity assessment
08 September 2021	The main purpose of this amendment was to inform about a possibility for potential drug-drug interactions (DDIs) for efflux and uptake transporters (as noted in the Investigator's Brochure Ed. 7.0). The update was due to new in vitro data on transporters in line with the FDA guidance and pending results from a planned DDI study (Study CLOU064A02103).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
