Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	01 October 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	01 October 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the trial was to estimate the overall response rate.

Protection of trial subjects:

The study protocol and all amendments, the informed consent form, and any accompanying materials provided to the participants were reviewed and approved by an Institutional Review Board (IRB) or Independent Ethics Committee (IEC) at each study center. This study was conducted in accordance with International Council for Harmonisation (ICH) Good Clinical Practice (GCP) regulations/guidelines. The investigator or his/her designee informed the participant of all aspects pertaining to the participant's participation in the study before any screening procedures were performed.

Background therapy:

Participants may receive intravenous (IV) pre-hydration (normal saline or other appropriate IV fluid) prior to each carfilzomib infusion during cycle 1. Investigators must consider IV pre-hydration in participants at high-risk for tumor lysis or renal toxicity.

Evidence for comparator: -

Actual start date of recruitment	06 August 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Scientific research
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Denmark: 4
Country: Number of subjects enrolled	France: 5
Country: Number of subjects enrolled	Germany: 1
Country: Number of subjects enrolled	Greece: 24
Country: Number of subjects enrolled	Italy: 7
Country: Number of subjects enrolled	Spain: 7
Country: Number of subjects enrolled	United States: 6
Worldwide total number of subjects	54
EEA total number of subjects	48

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	23
From 65 to 84 years	30
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at 25 study centers in Denmark, France, Germany, Greece, Italy, Spain, and the United States from 06 August 2020 to 01 October 2024.

Pre-assignment

Screening details:

Participants with relapsed multiple myeloma whose disease was refractory to lenalidomide were enrolled.

Pre-assignment period milestones

Number of subjects started	54
Number of subjects completed	52

Pre-assignment subject non-completion reasons

Reason: Number of subjects	Did not receive study treatment: 2
----------------------------	------------------------------------

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Carfilzomib with Pomalidomide and Dexamethasone (KPd)
-----------	---

Arm description:

Carfilzomib was administered intravenously on days 1, 8, and 15 (± 2 days) of each 28-day cycle for up to 12 cycles or progression or end of study. A dose of 20 mg/m² was administered on day 1 of cycle 1; all subsequent doses were 56 mg/m². From cycle 13, the frequency of carfilzomib administration was reduced to days 1 and 15 (± 2 days) per cycle until progression or end of study. Dexamethasone was administered orally or intravenously at a dose of 40 mg on days 1, 8, 15, and 22 of each cycle during cycles 1 to 12, and at a dose of 20 mg on days 1 and 15 from cycle 13 until progression or end of study. Pomalidomide 4 mg was administered orally on days 1 to 21 of each cycle until progression or end of study.

Arm type	Experimental
Investigational medicinal product name	Carfilzomib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Carfilzomib was administered intravenously on days 1, 8, and 15 (± 2 days) of each 28-day cycle for up to 12 cycles or progression or end of study. A dose of 20 mg/m² was administered on day 1 of cycle 1; all subsequent doses were 56 mg/m². From cycle 13, the frequency of carfilzomib administration was reduced to days 1 and 15 (± 2 days) per cycle until progression or end of study.

Investigational medicinal product name	Dexamethasone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet, Solution for infusion, Solution for injection
Routes of administration	Oral use, Intramuscular and intravenous use

Dosage and administration details:

Dexamethasone was administered orally or intravenously at a dose of 40 mg on days 1, 8, 15, and 22 of

each cycle during cycles 1 to 12, and at a dose of 20 mg on days 1 and 15 from cycle 13 until progression or end of study.

Investigational medicinal product name	Pomalidomide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Pomalidomide 4 mg was administered orally on days 1 to 21 of each cycle until progression or end of study.

Number of subjects in period 1^[1]	Carfilzomib with Pomalidomide and Dexamethasone (KPd)
Started	52
Completed	0
Not completed	52
Consent withdrawn by subject	4
Death	37
Sponsor decision	11

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The number of participants in the baseline period is equal to the number of participants who received study treatment.

Baseline characteristics

Reporting groups

End points

End points reporting groups

Reporting group title	Carfilzomib with Pomalidomide and Dexamethasone (KPd)
Reporting group description: Carfilzomib was administered intravenously on days 1, 8, and 15 (± 2 days) of each 28-day cycle for up to 12 cycles or progression or end of study. A dose of 20 mg/m ² was administered on day 1 of cycle 1; all subsequent doses were 56 mg/m ² . From cycle 13, the frequency of carfilzomib administration was reduced to days 1 and 15 (± 2 days) per cycle until progression or end of study. Dexamethasone was administered orally or intravenously at a dose of 40 mg on days 1, 8, 15, and 22 of each cycle during cycles 1 to 12, and at a dose of 20 mg on days 1 and 15 from cycle 13 until progression or end of study. Pomalidomide 4 mg was administered orally on days 1 to 21 of each cycle until progression or end of study.	

Primary: Overall Response Rate (ORR) as Assessed by the Independent Review Committee (IRC)

End point title	Overall Response Rate (ORR) as Assessed by the Independent Review Committee (IRC) ^[1]
-----------------	--

End point description:

Overall response was defined as the best overall confirmed response of: Complete response (CR): Negative immunofixation on serum and urine, soft tissue plasmacytomas disappearance, < 5% plasma cells in bone marrow (BM). Stringent CR (sCR): CR and normal serum free light chain ratio and no clonal cells in BM. Very Good Partial Response (VGPR): Serum and urine M-protein detectable by immunofixation or $\geq 90\%$ reduction in serum M-protein (urine M-protein level < 100 mg/24-h). PR: $\geq 50\%$ reduction of serum M-protein and 24-h urinary M-protein by $\geq 90\%$ or to < 200 mg/24-h. Assessment was by IRC per International Myeloma Working Group Uniform Response Criteria (IMWG-URC). The 90% confidence intervals were estimated using the Clopper-Pearson method (1994).

The safety analysis set included all participants who received at least 1 dose of carfilzomib.

End point type	Primary
----------------	---------

End point timeframe:

From day 1 cycle 1 until the primary analysis (PA) data cutoff (DCO); the mean duration of KPd treatment as of the DCO was 42.0 weeks

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Formal comparative statistical analysis was not pre-specified for this outcome measure.

End point values	Carfilzomib with Pomalidomide and Dexamethasone (KPd)			
Subject group type	Reporting group			
Number of subjects analysed	52			
Units: percentage of participants				
number (confidence interval 90%)	57.7 (45.4 to 69.3)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with a Minimal Residual Disease Negative Complete Response (MRD[-]CR) as Assessed by the IRC

End point title	Percentage of Participants with a Minimal Residual Disease Negative Complete Response (MRD[-]CR) as Assessed by the IRC
-----------------	---

End point description:

The MRD[-]CR rate was defined as the percentage of participants who reached MRD[-]CR at the 12 month landmark (8- to 13-month window). MRD[-]CR was defined as the achievement of CR (including sCR or better) per IMWG-URC by IRC assessment and MRD[-] status at a sensitivity of 10^{-5} using next-generation sequencing based method in the bone marrow. The 90% CIs were estimated using the Clopper-Pearson method (1994).

The safety analysis set included all participants who received at least 1 dose of carfilzomib. The analysis was pre-specified until PA DCO only.

End point type	Secondary

End point timeframe:

Day 1 cycle 1 to month 12 (8 to 13 month window)

End point values	Carfilzomib with Pomalidomide and Dexamethasone (KPd)			
Subject group type	Reporting group			
Number of subjects analysed	52			
Units: percentage of participants				
number (confidence interval 90%)	3.8 (0.7 to 11.6)			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Treatment-emergent Adverse Events (TEAEs)

End point title	Number of Participants with Treatment-emergent Adverse Events (TEAEs)
-----------------	---

End point description:

TEAEs were defined as events with onset on or after the administration of the first dose of any study treatment and within the end of study, or 30 days after the last dose of any study treatment, whichever one was earlier, excluding events reported after end of study date.

The safety analysis set included all participants who received at least 1 dose of carfilzomib.

End point type	Secondary
----------------	-----------

End point timeframe:

From the first dose of any study treatment until the end of study or 30 days after the last dose of any study treatment, whichever occurred earlier; Median (min, max) was 8.5 (1.0, 46.6) months

End point values	Carfilzomib with Pomalidomide and Dexamethasone (KPd)			
Subject group type	Reporting group			
Number of subjects analysed	52			
Units: participants	50			

Statistical analyses

No statistical analyses for this end point

Secondary: Number of Participants with Sustained MRD[-]CR for at Least 12 Months as Assessed by the IRC

End point title	Number of Participants with Sustained MRD[-]CR for at Least 12 Months as Assessed by the IRC
-----------------	--

End point description:

MRD[-]CR at the 12 months landmark was defined as achievement of CR (including sCR or better) per IMWG-URC by IRC and MRD[-] status at a sensitivity of 10^{-5} using NGS based method in the bone marrow at the 12 months landmark (from 8 months to 13 months window). Maintaining MRD[-]CR for at least 12 months (- 4 weeks) was considered as sustained.

The safety analysis set included all participants who received at least 1 dose of carfilzomib.

End point type	Secondary
----------------	-----------

End point timeframe:

Day 1 cycle 1 to month 12 (8 to 13 month window)

End point values	Carfilzomib with Pomalidomide and Dexamethasone (KPd)

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Death: 1st study drug to EOS, also after EOS; Median (min, max) was 16.5 (1.0, 47.0) months. Adverse events: 1st dose of any study treatment to earliest of EOS or 30 days after last dose of any study treatment; Median (min, max) was 8.5 (1.0, 46.6) months

Adverse event reporting additional description:

All-cause mortality is reported for all participants enrolled in the study. Serious adverse events and other adverse events are reported for all participants who received at least one dose of study drug.

Reporting groups

Reporting group title	Carfilzomib with Pomalidomide and Dexamethasone (KPd)
-----------------------	---

Reporting group description:

Carfilzomib was administered intravenously on days 1, 8, and 15 (± 2 days) of each 28-day cycle for up to 12 cycles or progression or end of study. A dose of 20 mg/m² was administered on day 1 of cycle 1; all subsequent doses were 56 mg/m². From cycle 13, the frequency of carfilzomib administration was reduced to days 1 and 15 (± 2 days) per cycle until progression or end of study. Dexamethasone was administered orally or intravenously at a dose of 40 mg on days 1, 8, 15, and 22 of each cycle during cycles 1 to 12, and at a dose of 20 mg on days 1 and 15 from cycle 13 until progression or end of study. Pomalidomide 4 mg was administered orally on days 1 to 21 of each cycle until progression or end of study.

Upper respiratory tract infection subjects affected / exposed occurrences (all)	6 / 52 (11.54%) 7		
Metabolism and nutrition disorders			
Hyperglycaemia subjects affected / exposed occurrences (all)	5 / 52 (9.62%) 6		
Dehydration subjects affected / exposed occurrences (all)	3 / 52 (5.77%) 3		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 September 2019	<ul style="list-style-type: none">• Cohort 1: Carfilzomib, Daratumumab, and Dexamethasone was removed.• Hepatic Insufficiency for pomalidomide was added.• Secondary endpoint of frequency of sustained MRD response was added.• Statistical analysis section was updated to include 12 month landmark.• Objectives and endpoints were clarified.• NGS-based method for evaluating MRD was added.• Title of protocol was updated to include second relapse.• IRC was added.• Number of subjects and number of sites were updated.• Study rationale and benefit/risk sections were updated with updated data.• Bone targeting agents were added to recommended therapies.
13 May 2020	<ul style="list-style-type: none">• Prophylaxis for Hepatitis B virus reactivation to other protocol-required therapies was added.• Hepatitis B dose modification was added.• MRD assessments were changed from a \pm 2-week window, to a \pm 4-week window.• The primary objective was updated from estimating the efficacy by rate of MRD[-] response of KPd to estimating the rate of MRD[-]CR.• Screening was updated regarding fetal toxicity, beginning 4 weeks prior to initiating treatment with pomalidomide.• Clarifications were made to PFS, OS, and CR in efficacy analyses.• Dose modification in abnormalities from tumor lysis syndrome were added.• Windows for radiological plasmacytoma assessments were extended from every 12 weeks to every 12 weeks \pm 2 weeks.• Screening evaluations for disease specific assessments, measurable disease, rescreening, echocardiograms, pulmonary function tests, bone lesions, and plasmacytomas were changed from 30 to 28 days.• 2 contraceptive methods were removed to align with the Summary of Product Characteristics for pomalidomide: (1) intrauterine devices and (2) combined (estrogen and progestogen containing) hormonal contraception associated with inhibition of ovulation.• Reporting requirement for start and stop time of Pomalidomide administration was removed.
26 March 2021	<ul style="list-style-type: none">• The requirement of daratumumab exposure was removed.• The ORR was updated as a key secondary endpoint to further designate this endpoint as clinically important and pre-specify the order for analysis.• The number of sites were updated from 35 to 45.• The carfilzomib dose modification guidelines for nonhematologic toxicities were updated.• The statistical considerations were updated, given newly available data that includes outcomes of subjects who are refractory to lenalidomide.• The safety reporting and birth control requirements were updated per the current protocol template.
16 May 2022	<ul style="list-style-type: none">• Primary endpoint was changed to ORR, and MRD[-] CR rate was moved to secondary endpoint.• The hypothesis and statistical consideration sections were updated to align with updated endpoints.• Pomalidomide modification guidelines were updated for nonhematologic toxicities.• Statements on discontinuation of recruitment after 54 subjects enrolled were added; decision was made because of challenges to enrollment in part due to evolving changes in multiple myeloma treatment landscape.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
