

Clinical trial results:

A Multicenter, Open-label, Randomized Phase 3 Clinical Study to Assess Efficacy and Safety of Bulevirtide in Patients with Chronic Hepatitis Delta

Summary

EudraCT number	2019-001213-17
Trial protocol	SE DE IT
Global end of trial date	08 August 2024

Results information

Result version number	v1 (current)
This version publication date	21 August 2025
First version publication date	21 August 2025

Trial information

Trial identification

Sponsor protocol code	MYR301

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 August 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	08 August 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of bulevirtide administered subcutaneously for 48 weeks at a dose of 2 mg or 10 mg once daily for treatment of chronic hepatitis delta in comparison to delayed treatment.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements. This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 April 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Sweden: 14
Country: Number of subjects enrolled	Germany: 27
Country: Number of subjects enrolled	Italy: 24
Country: Number of subjects enrolled	Russian Federation: 85
Worldwide total number of subjects	150
EEA total number of subjects	65

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23	0

months)	
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	150
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants were enrolled at study sites in Germany, Italy, Russia, and Sweden.

Pre-assignment

Screening details:

183 participants were screened.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Delayed Treatment/Bulevirtide 10 mg/Day
------------------	---

Arm description:

After an observational period of 48 weeks, participants received bulevirtide 10 mg/day subcutaneous (SC) injection for 96 weeks and were followed for up to 96 weeks (Up to Week 240).

Arm type	Experimental
Investigational medicinal product name	Bulevirtide 10 mg
Investigational medicinal product code	
Other name	Myrcludex B, Hepcludex
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered via SC injections.

Arm title	Bulevirtide 2 mg/day
------------------	----------------------

Arm description:

Participants received bulevirtide 2 mg/day SC injection for 144 weeks and were followed for up to 96 weeks (Up to Week 240).

Arm type	Experimental
Investigational medicinal product name	Bulevirtide 2 mg
Investigational medicinal product code	
Other name	Myrcludex B, Hepcludex
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Administered via SC injections.

Arm title	Bulevirtide 10 mg/Day
------------------	-----------------------

Arm description:

Participants received bulevirtide 10 mg/day SC injection for 144 weeks and were followed for up to 96 weeks (Up to Week 240).

Arm type	Experimental
Investigational medicinal product name	Bulevirtide 10 mg
Investigational medicinal product code	
Other name	Myrcludex B, Hepcludex
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:
Administered via SC injections.

Number of subjects in period 1	Delayed Treatment/Bulevirtide 10 mg/Day	Bulevirtide 2 mg/day	Bulevirtide 10 mg/Day

Primary: Percentage of Participants With Combined Response at Week 48

End point title	Percentage of Participants With Combined Response at Week 48
End point description: Combined response was defined as fulfilment of two conditions simultaneously: Undetectable (< lower limit of quantification (LLOQ, target not detected)) HDV RNA or decrease by $\geq 2 \log_{10}$ IU/mL from baseline; and ALT normalization. Analysis Population Description: The Full Analysis Set included participants randomized to delayed treatment arm or randomized to bulevirtide and received bulevirtide at least once after randomization. Participants were grouped according to randomized treatment. The arm titles and descriptions in this outcome measure are entered accordingly.

Method	MMRM
Parameter estimate	LS-Mean of Difference
Point estimate	2.11
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.41
upper limit	5.63

Notes:

[15] - Least squares (LS) means, standard errors (SE), 95% CIs were based on the mixed-effects model for repeated measurements (MMRM) model for change from baseline

[16] - P-value was based on the mixed-effects model for repeated measurements (MMRM) model.

Secondary: Percentage of Participants With Undetectable HDV RNA 24 Weeks After Scheduled End of Treatment (Sustained Virological Response)

End point title	Percentage of Participants With Undetectable HDV RNA 24 Weeks After Scheduled End of Treatment (Sustained Virological Response) ^[17]
-----------------	---

End point description:

Undetectable HDV RNA 24 Weeks after Scheduled End of Treatment means undetectable (< LLOQ, target not detected) HDV RNA at Week 168.

Analysis Population Description : Participants in the Full Analysis Set were analyzed. Participants were grouped according to randomized treatment and study design. The arm titles and descriptions in the outcome measure are entered accordingly.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 168

Notes:

[17] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical comparison was planned or performed.

End point values	Bulevirtide 2 mg/day	Bulevirtide 10 mg/Day	Delayed Treatment/Bulevirtide 10 mg/Day

Secondary: Percentage of Participants Who Prematurely Discontinued Study Drug Due to an Adverse Event (AE) by Week 144

End point title	Percentage of Participants Who Prematurely Discontinued Study Drug Due to an Adverse Event (AE) by Week 144 ^[23]
-----------------	---

End point description:

An AE was defined as any untoward medical occurrence in a participant administered study drug and which did not necessarily have a causal relationship with the study drug. An AE could therefore be any unfavourable and unintended sign (including an abnormal laboratory finding), symptom, or disease temporally associated with the use of study drug, whether or not related to the study drug.

Analysis Population Description : Participants in the SAS were analyzed. The SAS included all participants who were randomized into the study and took at least 1 dose of BLV study drug, or who were randomized to the delayed treatment group. Participants were grouped according to actual treatment received for time points Week 0 to 144. The arm titles and descriptions in this outcome measure are entered accordingly.

End point type	Secondary
----------------	-----------

End point timeframe:

Delayed Treatment/Bulevirtide 10 mg/day arm: Week 48 up to Week 144; Bulevirtide 2mg/day and 10 mg/day arms: First dose date up to Week 144

Notes:

[23] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: No statistical comparison was planned or performed.

Statistical analyses

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-Cause Mortality: Up to Week 240; Adverse Events: Week 0-48, Week 0-144, Week 48-144 and >Week 144 up to Week 240 per treatment description

Adverse event reporting additional description:

Participants grouped according to treatment received for time points Week (Wk) 0 to 48, 0 to 144, 48 to 144 and last treatment received after Wk144, up to Wk240. Arm titles and descriptions were entered accordingly. Actual treatment= randomized treatment, unless actual treatment was different than randomized treatment for entire treatment duration.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 February 2019	<p>Protocol Amendment 1 Summary:</p> <p>Administrative: Sponsor address updated; EudraCT number added.</p> <p>Abbreviations: Added for EQ-5O, FSS, HQLQ™, Local Reactions assessment, Treatment Compliance, and Quality of Life questionnaires.</p> <p>Synopsis: Tenofovir provision clarified: Sponsor provides if unavailable via routine medical care.</p> <p>Patient Rationale: Aligned with updated Exclusion Criteria.</p> <p>Eligibility: Plasma HOV RNA can now confirm patient eligibility.</p> <p>Exclusion Criteria Updates:</p> <p>Child-Pugh hepatic insufficiency >7 (uncomplicated esophageal varices allowed; exclude current/history of bleeding/ligation within 2 yrs).</p> <p>HCV/uncontrolled HIV coinfection: HCV Ab+ OK if HCV RNA negative. HIV+ OK if CD4 >500/mL & HIV RNA undetectable >12 mos.</p> <p>Uncontrolled arterial hypertension within 3 months pre-study (SBP >150 or DBP >100 mmHg despite treatment) allowed post-Study Medical Monitor confirmation.</p> <p>Current/previous (within last 2 yrs) decompensated liver disease (incl. coagulopathy, hepatic encephalopathy, esophageal varices hemorrhage).</p> <p>History of regular systemic glucocorticosteroid use (inhalative allowed).</p> <p>Participation in other investigational drug studies within 30 days pre-randomization.</p> <p>Prior bulevirtide receipt (incl. clinical trials).</p> <p>New/Revised Sections:</p> <p>Treatment Compliance section added.</p> <p>Prohibited treatments: Confirmed inhalative glucocorticosteroids allowed.</p> <p>Physical Examination: Added assessment of local injection site reactions (per Table 1; record in eCRF; AE if clinically significant).</p> <p>New section on Local bulevirtide injection site reactions.</p> <p>Pregnancy Reporting: Male subjects' pregnant partners require Information Sheet & ICF for pregnancy outcome data collection.</p>

17 March 2021	<p>New abbreviation is added (INR), 'Lower Limit of Detection' is changed to "Limit of Detection"</p> <p>The list of countries is corrected - Sweden was added</p> <p>It is added that tenofovir in tablets will be provided by Sponsor and in patients in whom tenofovir is contraindicated, entecavir (tablets) will be provided.</p> <p>Primary Efficacy Endpoint: It is corrected that Undetectable HOV RNA is <LoD</p> <p>Exploratory endpoints: "Clinical events (decompensation, liver related death)" is changed to "Liver related clinical events (cirrhosis development; development or worsening jaundice, coagulopathy, ascites, hepatic encephalopathy; bleeding from esophageal varices; Hepatocellular carcinoma development; liver transplantation; liver related hospitalization: amount of hospitalizations and duration of each period of hospitalization; liver related death) at all postbaseline assessments"</p> <p>Other variables: "HBeAg and HBeAg antibodies status at all postbaseline assessments (for patients with positive HBeAg at SCR)" is added.</p> <p>Primary Efficacy Endpoint: It is corrected that Undetectable HOV RNA is <LoD</p> <p>Exploratory endpoints: "Clinical events (decompensation, liver related death) is changed to "Liver related clinical events (cirrhosis development; development or worsening jaundice, coagulopathy, ascites, hepatic encephalopathy; bleeding from esophageal varices; Hepatocellular carcinoma development; liver transplantation; liver related hospitalization: amount of hospitalizations and duration of each period of hospitalization; liver related death) at all postbaseline assessments"</p> <p>Other variables: "HBeAg and HBeAg antibodies status at all postbaseline assessments (for patients with positive HBeAg at SCR)" is added.</p> <p>The list of countries is corrected - Sweden was added</p> <p>The following is added: "The study will be considered to have started when the first patient has provided signed informed consent, and will be considered to have finished after the last patient has completed the last follow-up"</p>
16 September 2021	<p>The major update(s) to the protocol and related rationale are as follows:</p> <p>An additional Phase 2 treatment arm was added that includes zimberelimab to allow the assessment of the efficacy and safety of magrolimab in combination with pembrolizumab +platinum + 5-FU (Cohort 1 Arm A) versus pembrolizumab + platinum + 5-FU (Cohort 1 Arm B) versus zimberelimab + platinum + 5-FU (Cohort 1 Arm C). Arm C was added to provide a comparison of zimberelimab with pembrolizumab in combination with magrolimab and chemotherapeutics in the treatment of head and neck squamous cell carcinoma (HNSCC).</p>
25 April 2022	<p>The primary reasons for this amendment are to: (1) update the regulatory and clinical development status of bulevirtide, (2) give instructions for operational changes in sample collection, and (3) specify changes to the statistical analyses.</p>
19 October 2022	<p>The primary reason for this amendment is to update the definition of viral breakthrough and nonresponders used for virologic resistance analysis and clarify the criteria for selection of the samples that will be tested for resistance.</p>
25 January 2023	<p>A Week 180 visit was added with additional assessments to allow a more standardized approach for study investigators to monitor and manage posttreatment hepatitis exacerbation.</p> <p>Updated the definition of hepatitis delta virus (HDV) ribonucleic acid (RNA) undetectable" to "< lower limit of quantification (LLOQ), target not detected."</p> <p>To identify and monitor participants at risk of developing a hepatitis flare, specific procedures were added for the management of posttreatment exacerbation of hepatitis, ie, if laboratory results indicated alanine aminotransferase (ALT) elevations.</p> <p>An optional third liver biopsy was added to the list of assessments.</p> <p>The timing of an exploratory analysis was changed from Week 168 to Week 192.</p> <p>Clarified details of adverse event (AE)/serious AE reporting procedures period and liver-related clinical events.</p> <p>Addition of Appendix 2 (Monitoring Study Participants for Posttreatment ALT Elevation: Flowchart) and Appendix 3 (Unscheduled Visit for Management of posttreatment ALT Elevations).</p> <p>Definition of Per Protocol Analysis Set was updated</p> <p>Updated the word 'Subject' to 'Participants' and other style-related changes included where possible.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
