

## Clinical trial results:

### A Randomized Double-blind Placebo Controlled Phase 3 Trial to evaluate the Efficacy and Safety of Estetrol for the Treatment of Moderate to Severe Vasomotor Symptoms in Postmenopausal Women (E4Comfort Study I)

#### Summary

EudraCT number	2019-001289-14
Trial protocol	PL GB SK HU LT CZ ES IT RO
Global end of trial date	08 February 2024

#### Results information

Result version number	v1 (current)
This version publication date	23 February 2025
First version publication date	23 February 2025

#### Trial information

##### Trial identification

Sponsor protocol code	MIT-Do001-C301
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04209543
WHO universal trial number (UTN)	-

**Results analysis stage**

---

Analysis stage	Final
Date of interim/final analysis	08 February 2024
Is this the analysis of the primary completion data?	No
<hr/>	
Global end of trial reached?	Yes
Global end of trial date	08 February 2024
Was the trial ended prematurely?	No

Notes:

---

**General information about the trial**

---

Main objective of the trial:

Arms 1-3:

Efficacy Study Part: measure the effect of treatment with estetrol (E4) 15 mg or E4 20 mg compared with placebo, regarding the frequency and severity of moderate to severe vasomotor symptoms (VMS) in postmenopausal women at 4 and 12 weeks. This part of the study included non-hysterectomized and hysterectomized women.

Arm 4:

Safety Study Part: assess the effect of treatment with E4 20 mg + Progesterone (P4) 100 mg on the endometrium. This part of the study included non-hysterectomized women only.

Protection of trial subjects:

The study was conducted according to the clinical study protocol, according with the principles of the Declaration of Helsinki, and local regulations, as well as according to the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH) notes for guidance on Good Clinical Practice (GCP) (ICH/CPMP/135/95).

Adverse events (AEs) and vital signs were recorded at all visits (from screening onward). Based on the medical opinion of the investigator, all new clinically relevant abnormalities or significant changes at the study visits were reported as AEs in the electronic case report form (eCRF). All safety assessments were performed according to accepted methods.

All non-hysterectomized subjects received treatment with P4 200 mg once daily for 14 consecutive days after completion of treatment with E4/Placebo.

An independent data safety monitoring board (DSMB) was involved in overseeing general and endometrial safety data of the study at regular, pre-defined intervals. The DSMB made recommendations regarding continuation, modification, or termination of the study. The DSMB was supported by a Clinical Event Committee, that was responsible for adjudicating cardiovascular and thrombotic events.

Background therapy:

None.

Evidence for comparator:

Not applicable.

**DEFINITIONS USED IN THIS DATA RECORD:**

ITT (Intent-to-Treat Set): included all randomized subjects who received at least one dose of randomized study drug. Used as the primary analysis population for the efficacy analyses. All analyses on this set were based on randomized treatment.

SAF (Safety Analysis Set): included all (randomized\*) subjects who received at least one dose of (randomized\*) study drug. Used for all analyses of safety, tolerability and background characteristics. All analyses on this set were based on treatment received.

(\*) Efficacy Study Part only.

Endometrial Safety Analysis Set: included all subjects who received at least one dose of study drug and had an evaluable biopsy at Baseline and at Month 12 (defined by a Visit window as on or after Day 326) or had a diagnosis of endometrial hyperplasia prior to Month 12. Evaluable biopsies included all biopsies,

except for biopsies with no tissue or insufficient tissue. This analysis set was defined only for the Safety Study Part.

## ABBREVIATIONS

Hx, hysterectomized  
NH, non-hysterectomized

Actual start date of recruitment	17 December 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	United States: 168
Country: Number of subjects enrolled	Russian Federation: 47
Country: Number of subjects enrolled	Brazil: 290
Country: Number of subjects enrolled	Argentina: 44
Country: Number of subjects enrolled	Canada: 42
Country: Number of subjects enrolled	Poland: 495
Country: Number of subjects enrolled	Romania: 87
Country: Number of subjects enrolled	Slovakia: 3
Country: Number of subjects enrolled	Spain: 41
Country: Number of subjects enrolled	United Kingdom: 119
Country: Number of subjects enrolled	Czechia: 168
Country: Number of subjects enrolled	Hungary: 14
Country: Number of subjects enrolled	Italy: 21
Country: Number of subjects enrolled	Lithuania: 23
Worldwide total number of subjects	1562
EEA total number of subjects	852

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1551
From 65 to 84 years	11
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Postmenopausal women aged 40-65 y seeking treatment for the relief of VMS associated with menopause (N=4502) were screened according to study inclusion and exclusion criteria:

-Efficacy Study Part:  $\geq 7$  moderate to severe VMS/day or  $\geq 50$  moderate to severe VMS/week.

-Safety Study Part: non hysterectomized;  $\geq 1$  moderate to severe VMS/week.

### Pre-assignment

Screening details:

Screening visit was generally up to 4 weeks before the first administration of the study drug. Screening was done according to the study inclusion and exclusion criteria. Signed Informed Consent Form was obtained prior to any study-related procedures.

### Period 1

Period 1 title	Treatment (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

Efficacy Study Part (ESP, Arms 1, 2, 3): randomized, double blind;

Safety Study Part (SSP, Arm 4): open-label.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	E4 15 mg

Arm description:

Efficacy Study Part: randomized, double-blind.

Estetrol monohydrate 15 mg (E4 15 mg), equivalent to estetrol 14.2 mg.

The study drug was to be taken once a day for up to 13 weeks, at approximately the same time each day.

Arm type	Experimental
Investigational medicinal product name	Estetrol monohydrate
Investigational medicinal product code	
Other name	E4 15 mg
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Efficacy Study Part: randomized, double-blind.

Estetrol monohydrate 15 mg (E4 15 mg), equivalent to estetrol 14.2 mg.

The study drug was to be taken once a day for up to 13 weeks, at approximately the same time each day.

<b>Arm title</b>	E4 20 mg
------------------	----------

Arm description:

Efficacy Study Part: randomized, double-blind.

Estetrol monohydrate 20 mg (E4 20 mg), equivalent to estetrol 18.9 mg.

The study drug was to be taken once a day for up to 13 weeks, at approximately the same time each day.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Estetrol monohydrate
Investigational medicinal product code	
Other name	E4 20 mg
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Efficacy Study Part: randomized, double-blind.

Estetrol monohydrate 20 mg (E4 20 mg), equivalent to estetrol 18.9 mg.

The study drug was to be taken once a day for up to 13 weeks, at approximately the same time each day.

<b>Arm title</b>	Placebo
------------------	---------

Arm description:

Efficacy Study Part: randomized, double-blind.

Placebo, film-coated tablet, with no active substance.

The study drug was to be taken once a day for up to 13 weeks, at approximately the same time each day.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Efficacy Study Part: randomized, double-blind.

Film coated tablet, with no active substance.

The study drug was to be taken once a day for up to 13 weeks, at approximately the same time each day.

<b>Arm title</b>	E4 20 mg + P4 100 mg
------------------	----------------------

Arm description:

Safety Study Part: open-label.

All subjects received estetrol monohydrate 20 mg (E4 20 mg), equivalent to estetrol 18.9 mg, in combination with Progesterone 100 mg (P4 100 mg) continuously, once a day, for up to 53 weeks.

Arm type	Experimental
Investigational medicinal product name	Progesterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Safety Study part: open-label arm.

All subjects received E4 20 mg, equivalent to estetrol 18.9 mg, in combination with Progesterone 100 mg (P4 100 mg).

The study drugs were to be taken once a day for up to 53 weeks, at approximately the same time each day.

Investigational medicinal product name	Estetrol monohydrate
Investigational medicinal product code	
Other name	E4 20 mg
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Safety Study Part: open-label arm.

All subjects received E4 20 mg, equivalent to estetrol 18.9 mg, in combination with Progesterone 100 mg (P4 100 mg) continuously for up to 53 weeks.

The study drugs were to be taken once a day for up to 53 weeks, at approximately the same time each day.

### **Primary: 3\_Mean change in severity of moderate to severe vasomotor symptoms (VMS) from Baseline to Week 4 -- Efficacy Study Part**

End point title	3_Mean change in severity of moderate to severe vasomotor symptoms (VMS) from Baseline to Week 4 -- Efficacy Study Part <sup>[9]</sup>
-----------------	--

End point description:

Efficacy Study Part

The mean severity score of VMS at Baseline is defined as the arithmetic mean of the daily severity score values of moderate and severe VMS experienced during the last 7 days prior randomization.

The mean severity score of VMS at Week 4 is defined as the arithmetic mean of the daily severity score values of moderate and severe VMS experienced during Week 4.

(VMS=vasomotor symptoms)

Daily severity score of VMS = [(2 x number of moderate VMS) + (3 x number of severe VMS)]/ (total number of moderate + severe VMS), if at least one moderate to severe VMS was recorded during the day. In case of documented absence of moderate to severe VMS during the day, the daily severity was set to zero.

Severity score is derived as follows: mild = 1, moderate = 2, severe = 3.

Results are shown as change in mean severity score.

End point type	Primary
----------------	---------

End point timeframe:

Week 0 (Baseline) and Week 4.

**Primary: 4\_Mean change in severity of moderate to severe vasomotor symptoms (VMS) from Baseline to Week 12 -- Efficacy Study Part**

---

End point title	4_Mean change in severity of moderate to severe vasomotor symptoms (VMS) from Baseline to Week 12 -- Efficacy Study Part <sup>[13]</sup>
-----------------	--

End point description:

Efficacy Study Part

The mean severity score of VMS at Baseline is defined as the arithmetic mean of the daily severity score values of moderate and severe VMS experienced during the last 7 days prior randomization.

The mean severity score of VMS at Week 12 is defined as the arithmetic mean of the daily severity score values of moderate and severe VMS experienced during Week 12.

(VMS=vasomotor symptoms)

Daily severity score of VMS = [(2 x number of moderate VMS) + (3 x number of severe VMS)]/ (total number of moderate + severe VMS), if at least one moderate to severe VMS was recorded during the day. In case of documented absence of moderate to severe VMS during the day, the daily severity was set to zero.

Severity score is derived as follows: mild = 1, moderate = 2, severe = 3.

Results are shown as change in mean severity score.

End point type	Primary

**Primary: 5\_Incidence (number) of endometrial hyperplasia with up to 12 months of treatment based on endometrial biopsies -- Safety Study Part**

End point title	5_Incidence (number) of endometrial hyperplasia with up to 12 months of treatment based on endometrial biopsies -- Safety Study Part <sup>[17][18]</sup>
-----------------	--

End point description:

Safety Study Part

A summary of the Final/Consensus diagnosis of endometrial biopsies across all post-baseline visits is provided.

An endometrial biopsy was obtained during the Screening period and at the EOT/Early Discontinuation visit. An additional unscheduled biopsy could have been taken if a subject presented with endometrial thickness >10 mm on TVUS, or persistent and/or recurrent bleeding. Biopsies were read by a panel of 3 independent expert pathologists as per regulatory requirements. The Final/Consensus diagnosis was defined as the concurrence of at least 2 diagnoses from the 3 pathologists, and if there was no agreement among at least 2 pathologists, the most severe pathologic diagnosis was used. The WHO classification which separates endometrial diagnoses into 6 categories (benign endometrium, simple hyperplasia, complex hyperplasia, simple atypical hyperplasia, complex atypical hyperplasia, carcinoma) was applied for the assessment of the Final/Consensus diagnosis.

End point type	Primary
----------------	---------

End point timeframe:

Week 0 (Baseline) and Week 55 (Follow-Up).

Notes:

[17] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The Safety Study Part is single arm.

[18] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: This endpoint belongs to the Safety Study Part, which is single arm (Arm 4).

End point title	8_Percentage of subjects with a clinically important difference (CID) compared to Baseline, Week 4 -- Efficacy Study Part <sup>[27]</sup>
-----------------	---

End point description:

Efficacy Study Part

Percentage of subjects with a CID compared to Baseline in the weekly frequency of moderate to severe VMS at Week 4 using the Clinical Global Impression (CGI) questionnaire.

CGI questionnaire: questionnaire in which subjects were to answer the question "Rate the total improvement, whether or not in your judgement it is due entirely to drug treatment. Compared to your condition at administration to the study, how much has it changed?". The options were: very much improved, much improved, minimally improved, no change, minimally worse, much worse, and very much worse.

CID (=Clinically Important Difference) = much improved + very much improved;

MCID (=Minimally Clinically Important Difference) = minimally improved.

## Secondary: 10\_Change from Baseline to Week 12 in VVA symptoms (subject self-

**assessment) using VVA questionnaire -- Efficacy Study Part**

End point title	10_Change from Baseline to Week 12 in VVA symptoms (subject self-assessment) using VVA questionnaire -- Efficacy Study Part <sup>[35]</sup>
-----------------	---

End point description:

Efficacy Study Part

Change from Baseline to Week 12 in VVA symptoms (subject self-assessment) using VVA questionnaire.

Vulvovaginal atrophy (VVA) questionnaire and scoring system: questionnaire about the following symptoms: vaginal dryness, vaginal and/or vulvar irritation/itching, dysuria, vaginal pain associated with sexual activity, and vaginal bleeding associated with sexual activity. All symptoms except vaginal bleeding associated with sexual activity were graded by the subject using the following scale: 0 = none, 1 = mild, 2 = moderate, or 3 = severe. Vaginal bleeding associated with sexual activity was documented as [0] absent or [1] present.

The proportion of subjects with vaginal bleeding associated with sexual activity was low in the E4 treatment arms and placebo at Baseline so that no reliable conclusions could be drawn.

Dyspareunia=Vaginal Pain Associated with Sexual Activity

## Secondary: 11\_Change from Baseline to Week 12 in HRQoL using the Menopause-specific Quality of Life (MENQOL) questionnaire -- Efficacy Study Part

End point title	11_Change from Baseline to Week 12 in HRQoL using the Menopause-specific Quality of Life (MENQOL) questionnaire -- Efficacy Study Part <sup>[39]</sup>
-----------------	--

End point description:

Efficacy Study Part

Change from Baseline to Week 12 in HRQoL using the MENQOL questionnaire.

The MENQOL questionnaire is a 29-item (Q1-Q29) assessment of quality of life designed to capture self-reported information on the presence and bother of symptoms, feelings and experiences in the domains of vasomotor, psychosocial, physical and sexual functioning, among midlife women in the immediate post-menopause period. Lower scores indicate better quality of life. The MENQOL questionnaire administered after study drug administration refers to the symptoms experienced over the past month. (HRQoL=Health-Related Quality of Life; MENQOL=Menopause-specific Quality of Life)

End point type	Secondary

## Secondary: 12\_Number of subjects in the different endometrial categories -- Efficacy Study Part

End point title	12_Number of subjects in the different endometrial categories - - Efficacy Study Part <sup>[43]</sup>
-----------------	--

End point description:

Efficacy Study Part

A summary of the Final/Consensus diagnosis of endometrial biopsies across all post-baseline visits is provided.

An endometrial biopsy was obtained during the Screening period and at the EOT/Early Discontinuation visit. An additional unscheduled biopsy could have been taken if a subject presented with endometrial thickness >10 mm on TVUS, or persistent and/or recurrent bleeding. Biopsies were read by a panel of 3

independent expert pathologists as per regulatory requirements. The Final/Consensus diagnosis was defined as the concurrence of at least 2 diagnoses from the 3 pathologists, and if there was no agreement among at least 2 pathologists, the most severe pathologic diagnosis was used. The WHO classification which separates endometrial diagnoses into 6 categories (benign endometrium, simple hyperplasia, complex hyperplasia, simple atypical hyperplasia, complex atypical hyperplasia, carcinoma) was applied for the assessment of the Final/Consensus diagnosis.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 0 (Baseline) and Week 15 (Follow-Up).

Notes:

[43] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Secondary study endpoint; no statistics presented.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

From Day 1 (first IMP intake) until:

Week 13 for Efficacy Study Part: Hysterectomized participants

Week 15/16 for Efficacy Study Part: Non Hysterectomized participants

Week 55/56 for Safety Study Part: All participants

Adverse event reporting additional description:

Treatment-emergent AEs (TEAEs): AEs occurring from time of first IMP intake until last visit or any event already present that worsens (either intensity or frequency) after exposure to the treatment.

MedDRA dictionary: version 24.1 for groups E4 15 mg, E4 20 mg, Placebo; version 25.0. for group E4 20 mg + P4 100 mg.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 November 2019	<p>Amendment 1, leading to version 2.0 of the protocol, date November 28, 2019</p> <p>Inclusion criterion was added for non hysterectomized subjects regarding uterus with bi-layer endometrial thickness <math>\leq 4</math> mm on TVUS.</p> <p>Exclusion criterion regarding diabetes mellitus was changed from "fasting glucose outside the normal ranges and glycated hemoglobin above 7%" To "fasting glucose outside the normal ranges and/or glycated hemoglobin above 7%".</p> <p>Exclusion criterion regarding dyslipoproteinemia was changed from "(LDL &gt;190 mg/dL and triglycerides &gt;300 mg/dL)" to "(LDL &gt;190 mg/dL and/or triglycerides &gt;300 mg/dL)".</p> <p>Exclusion criterion regarding smoking was changed from 5 cigarettes per day to 15 cigarettes per day. The number of packs per week has been deleted.</p> <p>Exclusion criterion was changed from "Inadequately treated hyperthyroidism at screening" to "Inadequately treated hyperthyroidism with abnormal TSH and free T4 at screening. Subjects with low TSH are allowed if free T4 at screening is within normal range."</p>
24 February 2020	<p>Amendment 2, leading to version 3.0 of the protocol, date February 24, 2020</p> <p>Exclusion criterion updated to cover not only "enlarged uterus with myoma" but also "any uterine/endometrial abnormality which in the judgment of the investigator contraindicates the use of estrogen and/or progestin therapy".</p> <p>Exclusion criterion changed for clarification: "Diabetes mellitus with poor glycemic control in the last 6 months assessed by fasting glucose outside the normal ranges and glycated hemoglobin above 7%" was replaced with "Laboratory values of fasting glucose above 125 mg/dL (&gt;6.94 mmol/L) and/or glycated hemoglobin above 7%".</p>
09 July 2020	<p>Amendment 3, leading to version 4.0 of the protocol, date July 09, 2020</p> <p>Inclusion criterion regarding mammography and BI-RADS 0 was adjusted to clarify that a BI-RADS 0 may be acceptable if further assessment is done confirming non clinical significant changes.</p> <p>Addition of a section about Adverse Events of Special Interest (AESIs) to the protocol.</p>

05 August 2021	<p>Amendment 4.1, leading to version 5.1 of the protocol, date August 05, 2021</p> <p>Disordered proliferative endometrium (DPE) removed from the reasons for study discontinuation and exclusion criteria, to align with regulatory approach and based on the available safety information.</p> <p>Extended the maximum screening period; increased the planned number of subjects to be enrolled in Arm 4 based on the available safety information; added information regarding COVID-19 vaccination during the trial, including a recommendation on the timing of vaccination in relation to study assessments.</p> <p>Updated the definition for the hierarchy of the pathologic diagnoses of endometrial tissue. Defined the process for resolution of endometrial events. Increased the number of pathologists who assessed endometrial biopsies and clarified pathologists' roles. Clarified secondary efficacy endpoints regarding frequency and severity of vasomotor symptoms (VMS); added information regarding restart patients on study treatment after study drug interruption. Specified that exclusion criterion about high risk oncogene human papilloma virus (HPV) included subtypes 16 and 18.</p> <p>Endometrial and General Safety Study part: Safety endpoints for endometrial safety were adjusted. Added information text that P4 200 mg may be administered after treatment discontinuation due to vaginal bleeding or endometrial event if deemed necessary by the Investigator.</p>
27 April 2022	<p>Amendment 5, leading to version 6.0 of the protocol, date April 27, 2022</p> <p>Following interaction with FDA regarding the study, disordered proliferative endometrium was reincluded as an exclusion criterion and as a reason for discontinuation.</p>

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None.

Notes:
