

Clinical trial results:

A single-center, open-label, single-arm, 13-week study to evaluate the efficacy, safety and tolerability of ORY-2001 in aggression in Alzheimer's Disease (AD) – REIMAGINE-AD

Summary

EudraCT number	2019-001436-54
Trial protocol	ES
Global end of trial date	17 August 2020

Results information

Result version number	v1 (current)
This version publication date	23 September 2023
First version publication date	23 September 2023

Trial information

Trial identification

Sponsor protocol code	CL06-ORY-2001

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 June 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 August 2020
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the efficacy of ORY-2001 in aggression in an AD population

Protection of trial subjects:

In accordance with European Union RGPD 2016/679 of 27 April, 2016 the data were processed in accordance with the specifications outlined by the local law to ensure that requirements regarding personal data protection are met. If an external organization processed data on behalf of Oryzon, a contractual procedure was signed between Oryzon and the external organization to ensure compliance with the above-mentioned legislation. If applicable, the participation of patients in this study was reported to the appropriate local data protection agencies, in accordance with European Union RGPD 2016/679 of 27 April 2016 and Country-specific guidelines and laws (Spanish Organic Law 3/2018 of 5 December).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	17 June 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 13
Worldwide total number of subjects	13
EEA total number of subjects	13

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	1
From 65 to 84 years	12

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

It was planned that approximately 15 patients were screened in one single center to obtain a total of 8-12 subjects. A total of 13 patients were screened and 12 subjects were included in the study.

Pre-assignment

Screening details:

This Phase IIa study was a single center, open-label, single arm study with a 1-week Screening Period and no study related procedures, including any screening procedures, were performed before the PI had obtained written informed consent from the patient and/or his/her legal representative and the close relative/caregiver.

Period 1

Period 1 title	Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Treatment arm
-----------	---------------

Arm description:

1.2 mg dose of vafidemstat five times in week (fiw).

Arm type	Experimental
Investigational medicinal product name	Vafidemstat
Investigational medicinal product code	ORY-2001
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Vafidemstat was administered daily for 5 days, at a dose of 1.2 mg/day.

Number of subjects in period 1 ^[1]	Treatment arm
Started	12
Completed	7
Not completed	5
Adverse event, serious fatal	1
Consent withdrawn by subject	2
Adverse event, non-fatal	1
Protocol deviation	1

Notes:

[1] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: 12 subjects were enrolled however 5 did not complete the study treatment period due to the reasons described.

Baseline characteristics

Reporting groups

Reporting group title	Treatment arm
-----------------------	---------------

Reporting group description:

1.2 mg dose of vafidemstat five times in week (fiw).

Reporting group values	Treatment arm	Total	
Number of subjects	12	12	
Age categorical			
Units: Subjects			
In utero	0	0	
Preterm newborn infants (gestational age < 37 wks)	0	0	
Newborns (0-27 days)	0	0	
Infants and toddlers (28 days-23 months)	0	0	
Children (2-11 years)	0	0	
Adolescents (12-17 years)	0	0	
Adults (18-64 years)	1	1	
From 65-84 years	11	11	
85 years and over	0	0	
Age continuous			
Units: years			
arithmetic mean	74.83		
standard deviation	± 7.18	-	
Gender categorical			
Units: Subjects			
Female	7	7	
Male	5	5	

End points

End points reporting groups

Reporting group title	Treatment arm
Reporting group description: 1.2 mg dose of vafidemstat five times in week (fiw).	
Subject analysis set title	SAF
Subject analysis set type	Safety analysis
Subject analysis set description: The safety population includes all patients who received at least one dose of the study IMP	
Subject analysis set title	FAS
Subject analysis set type	Full analysis
Subject analysis set description: All randomized patients who received at least one dose of the IMP and have completed at least one of the primary endpoints (NPI-A/A, CMAI, CGI-A/A) in Baseline Visit (Week 1-Day 1) and any other post-Baseline Visit.	
Subject analysis set title	PPS
Subject analysis set type	Per protocol
Subject analysis set description: Per-Protocol Set 1 (PPS) until Visit 4: All randomized patients of the FAS who have completed the assessment of at least one primary endpoint (NPI-A/A, CMAI, CGI-A/A) at Visit 4 (Week 8), and who were deemed to have no major protocol violations until Week 24 that could interfere with the objectives of this study. This is a subpopulation of the FAS.	
Subject analysis set title	PPS2
Subject analysis set type	Per protocol
Subject analysis set description: Per-Protocol Set 2 (PPS2) until Visit 8: All randomized patients of the FAS who have completed the assessment of at least one primary endpoint (NPI-A/A, CMAI, CGI-A/A) at Visit 8 (Week 24), and who were deemed to have no major protocol violations until Week 24 that could interfere with the objectives of this study. This is a subpopulation of the FAS. Two subjects continued the study treatment for an additional 24-weeks, for a total of up to 48 weeks.	

Primary: Change from baseline in NPI-4 A/A

End point title	Change from baseline in NPI-4 A/A ^[1]
End point description:	
End point type	Primary
End point timeframe: From baseline to week 8 and to week 24	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: It is a single-arm study, comparisons were made within that single-arm comparing baseline and end-of-treatment data.

End point values	FAS	PPS	PPS2	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	12	10	7	
Units: Subscale scores				
arithmetic mean (standard deviation)				
NPI-A/A Subscale scores	12.17 (± 6.25)	6.5 (± 4.65)	2.29 (± 3.40)	

Statistical analyses

No statistical analyses for this end point

Primary: Change from baseline in the Cohen-Mansfield Agitation inventory (CMAI)

End point title	Change from baseline in the Cohen-Mansfield Agitation inventory (CMAI) ^[2]
-----------------	---

End point description:

End point type	Primary
----------------	---------

End point timeframe:

From baseline to week 8 and to week 24

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: It is a single-arm study, comparisons were made within that single-arm comparing baseline and end-of-treatment data.

End point values	FAS	PPS	PPS2	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	12	10	7	
Units: CMAI score

Neutropenia subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Thrombocytopenia subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
General disorders and administration site conditions Edema peripheral subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Hepatobiliary disorders Cholecystitis acute subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Psychiatric disorders			

Behaviour disorder subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Insomnia subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Musculoskeletal and connective tissue disorders			
Joint swelling subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Rotator cuff syndrome subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Infections and infestations			
Cellulitis subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Nasopharyngitis subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Oral infection subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Tooth abscess subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Metabolism and nutrition disorders			
Decreased appetite subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		
Iron deficiency subjects affected / exposed occurrences (all)	1 / 12 (8.33%) 1		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 July 2019	Protocol v2.0: Extended-treatment period
30 January 2020	Protocol v3.0: Extended-treatment period

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Small sample size and open study design. A larger, randomized, double-blind, placebo-controlled trial is needed to confirm study results and demonstrate vafidemstat's potential efficacy in treating agitation and aggression in moderate-to-severe AD.

Notes:
