

Clinical trial results:

A Phase 2, Multicenter, Randomized, Double-Blind, Placebo-Controlled Study to Evaluate the Safety, Tolerability, and Efficacy of Zilucoplan in Subjects with Immune-Mediated Necrotizing Myopathy

Summary

EudraCT number	2019-001497-29
Trial protocol	FR NL
Global end of trial date	15 June 2021

Results information

Result version number	v1
This version publication date	19 March 2022
First version publication date	19 March 2022

Trial information

Trial identification

Sponsor protocol code	RA101495-02.202

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	02 August 2021
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 June 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the safety and efficacy of zilucoplan over placebo in creatine kinase (CK) levels in study participants with immune-mediated necrotizing myopathy (IMNM).

Protection of trial subjects:

This study was conducted in accordance with the current version of the applicable regulatory and International Council for Harmonisation (ICH)-Good Clinical Practice requirements, the ethical principles that have their origin in the principles of the Declaration of Helsinki, and the local laws of the countries involved.

Background therapy:

All standard of care therapy medications for IMNM were kept at the same doses throughout the study, including corticosteroids, immunosuppressive drugs, and intravenous immunoglobulin (IVIG).

Evidence for comparator: -

Actual start date of recruitment	03 December 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Netherlands: 1
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	United Kingdom: 4
Country: Number of subjects enrolled	United States: 18
Worldwide total number of subjects	27
EEA total number of subjects	5

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	21
From 65 to 84 years	6
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was performed in 4 countries (France, the Netherlands, the United Kingdom, and the United States of America) between 03 December 2019 and 15 June 2021.

Pre-assignment

Screening details:

Of the 37 participants who were screened, 27 participants with IMNM were randomized in a 1:1 ratio to receive zilucoplan 0.3 mg/kg or a matching placebo for the 8-week Treatment Period in the Main Portion. All eligible participants were given the option to receive daily subcutaneous (SC) zilucoplan 0.3 mg/kg in the Extension Portion.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants were randomized to receive daily SC doses of matching placebo during the 8-week Main Portion of the study. All eligible participants were given the option to receive daily SC zilucoplan 0.3 mg/kg in the Extension Portion of the study.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Daily SC injection over the 8-week study period.

Arm title	Zilucoplan 0.3 mg/kg
------------------	----------------------

Arm description:

Participants were randomized to receive daily SC doses of zilucoplan 0.3 mg/kg during the 8-week Main Portion of the study. All eligible participants were given the option to receive daily SC zilucoplan 0.3 mg/kg in the Extension Portion of the study.

Arm type	Experimental
Investigational medicinal product name	Zilucoplan
Investigational medicinal product code	RA101495
Other name	ZLP
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Daily SC injection over the 8-week study period.

Number of subjects in period 1	Placebo	Zilucoplan 0.3 mg/kg
Started	15	12
Completed Main Portion	15	12
Started Main Portion Safety Follow-up	2	0
Completed Main Portion Safety Follow-up	0	0
Started Extension Portion	13	12
Completed	0	0
Not completed	15	12
Consent withdrawn by subject	1	1
Physician decision	3	1
Adverse event, non-fatal	1	1
Study terminated by sponsor	10	9

Subject analysis set type	Sub-group analysis
Subject analysis set description: Participants received daily SC doses of zilucoplan 0.3 mg/kg during the Extension Portion of the study.	

Primary: Percentage Change From Baseline to Week 8 in Serum CK Levels

End point title	Percentage Change From Baseline to Week 8 in Serum CK Levels
End point description: All laboratory samples were obtained prior to administration of study drug at applicable visits. CK levels were measured by a central laboratory. The Intent-to-Treat (ITT) Population included all randomized study participants. The ITT population with no missing observations at Baseline and Week 8.	
End point type	Primary
End point timeframe: Baseline (Day 1) and end of Main Portion (Week 8)	

End point values	Placebo	Zilucoplan 0.3 mg/kg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	14	10		
Units: percentage change				
arithmetic mean (standard deviation)	-20.72 (± 31.22)	-9.86 (± 26.06)		

Statistical analyses

Statistical analysis title	Placebo versus (vs) Zilucoplan 0.3 mg/kg
Statistical analysis description:	
The p-value was calculated using a 2-sided Van Elteren test, which represents an extension of the Wilcoxon rank sum test for comparing 2 treatments in a stratified experiment using within-stratum ranks assigning greater weight to rank sums from smaller strata. The magnitude of association between treatment groups was expressed as in Wilcoxon-Mann-Whitney odds followed by the 95% confidence intervals.	
Comparison groups	Placebo v Zilucoplan 0.3 mg/kg
Number of subjects included in analysis	24
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.464
Method	2-sided Van Elteren test
Parameter estimate	Wilcoxon-Mann-Whitney odds
Point estimate	0.55
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.19
upper limit	1.57

Primary: Number of Participants Who Experienced a Treatment-Emergent Adverse Event (TEAE)

End point title	Number of Participants Who Experienced a Treatment-Emergent Adverse Event (TEAE) ^[1]
-----------------	---

End point description:

A TEAE was defined as:

- An adverse event (AE) that occurred after study treatment start that was not present at the time of treatment start.
- An AE that increased in severity after treatment start if the event was present at the time of treatment start.

The Safety Population included all participants who have received at least 1 dose of study drug, with participants analyzed based on the actual study treatment received.

End point type	Primary
----------------	---------

End point timeframe:

Baseline (Day 1) to Safety Follow-up Visit (a maximum of 551 days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No additional statistical analysis was pre-specified for this end point.

End point values	Main Portion: Placebo	Main Portion: Zilucoplan 0.3 mg/kg	Extension Portion: Zilucoplan 0.3 mg/kg	
Subject group type	Subject analysis set	Subject analysis set	Subject analysis set	
Number of subjects analysed	15	12	25	
Units: participants	13	9	20	

Statistical analyses

Secondary: Number of Participants Who Achieve at Least Minimal Response Based on the American College of Rheumatology/ European League Against Rheumatism (ACR/EULAR) Response Criteria Scale

End point title	Number of Participants Who Achieve at Least Minimal Response Based on the American College of Rheumatology/ European League Against Rheumatism (ACR/EULAR) Response Criteria Scale
-----------------	--

End point description:

The ACR/EULAR scale utilized a conjoint analysis-based continuous model using absolute percent change from Baseline in core set measures (physician, patient, and Myositis Disease Activity Assessment Tool (MDAAT); muscle strength; Health Assessment Questionnaire (HAQ); and muscle enzyme levels). A total improvement score (range 0-100) was determined by summing scores for each core set measure and comparing improvement in each respective core set measure. The threshold for minimal improvement was ≥ 20 in the total improvement score with higher scores indicating a better outcome. The ITT Population with no missing observations at Baseline and Week 8.

End point type	Secondary
End point timeframe:	
Baseline (Day 1) and end of Main Portion (Week 8)	

End point values	Placebo	Zilucoplan 0.3 mg/kg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	14	11		
Units: participants	7	6		

Statistical analyses

Statistical analysis title	Placebo vs Zilucoplan 0.3 mg/kg
----------------------------	---------------------------------

Statistical analysis description:

The p-value for the comparison of treatment groups was calculated using logistic regression with investigational medicinal product and strata as fixed factors.

Comparison groups	Placebo v Zilucoplan 0.3 mg/kg
Number of subjects included in analysis	25
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.919
Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	1.088
Confidence interval	
level	95 %
sides	2-sided
lower limit	0.214
upper limit	5.535

Secondary: Change From Baseline to Week 8 in Triple Timed Up and Go Test (3TUG) Time

End point title	Change From Baseline to Week 8 in Triple Timed Up and Go Test (3TUG) Time
-----------------	---

End point description:

The 3TUG test involved the ambulatory participant getting up from a seated position in a chair, walking at their normal pace for 3 meters, turning around, walking back to the chair, and sitting down. This sequence was repeated 3 times without rest, and the 3TUG test time is the average of the 3 lap times. A negative change from baseline indicated a better outcome. The ITT Population with no missing observations at Baseline and Week 8. The test was also only performed in participants who were ambulatory.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Day 1) and end of Main Portion (Week 8)

End point values	Placebo	Zilucoplan 0.3 mg/kg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	10	10		
Units: seconds				
least squares mean (standard error)	-0.712 (\pm 0.789)	-1.401 (\pm 0.788)		

Statistical analyses

Statistical analysis title	Placebo vs Zilucoplan 0.3 mg/kg
----------------------------	---------------------------------

Statistical analysis description:

The p-value was based on a linear model with treatment and strata (anti-3-hydroxy-3-methyl-glutarylcoenzyme A reductase [HMGCR]+/anti-signal recognition particle [SRP]+) as fixed factors with Baseline 3TUG as a covariate. The difference presented is zilucoplan 0.3 mg/kg minus placebo.

Comparison groups	Placebo v Zilucoplan 0.3 mg/kg
Number of subjects included in analysis	20
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.496
Method	Linear Mixed Effect Model
Parameter estimate	Least squares (LS) mean difference
Point estimate	-0.688
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.781
upper limit	1.404

Secondary: Change From Baseline to Week 8 in Proximal Manual Muscle Testing (MMT) Score

End point title	Change From Baseline to Week 8 in Proximal Manual Muscle Testing (MMT) Score
-----------------	--

End point description:

The proximal MMT assessed muscle strength using manual muscle testing in 7 muscle groups (left and right sides analyzed separately). A 10-point score scale (0, 1, 2, 3-, 3, 4-, 4, 4+, 5-, 5) where 0 indicates no perceptible muscle contraction and 5 indicates maximum force generation by muscle against maximum resistance was used for 7 proximal, distal, and axial muscles. The total MMT score for this study could range from 0-140, where 0 means no strength in any muscles and 140 means full strength in all the muscles examined. A negative change from Baseline indicated a worse outcome. The ITT Population with no missing observations at Baseline and Week 8.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
16 February 2021	<ul style="list-style-type: none">- The Extension Portion was included in the Objectives and Endpoints table. Notes were added into the global protocol amendment that the long-term safety, tolerability, and efficacy were evaluated during the open-label Extension Portion of the study.- Text regarding safety data review was updated.- For France only, the duration of study participation during the Extension Portion of this study was amended from 4 months to 18 months.- Added exclusion criterion 14 (hypersensitivity to investigational medicinal product [IMP]).- Footnote "a" was updated to state that if a study participant permanently discontinued IMP treatment prior to the Week 8 Visit for any reason, he/she was not eligible for the Extension Portion. For study participants who permanently discontinued treatment with IMP, a Safety Follow-up Visit was performed 40 days after the last dose to collect information on any ongoing AEs or new serious adverse events since the last study visit.- A new footnote "b" was added to the "Visits after Day Extension (E)117" to state that for France only, the duration of study participation during the Extension Portion included an open-label, single-arm, 18-month Treatment Period.- Revised information on contraception.- The objectives and endpoints were revised to reflect current UCB practices for the categorization and description of study objectives based on estimand definitions (to align with the updated ICH E9 [R1] addendum).- The efficacy analysis presented in the protocol was updated from the 2-sided Wilcoxon rank sum test to the Van Elteren test, and a sentence was added to state that the effect of ZLP on ACR/EULAR minimal response was investigated using a binary logistic regression model with treatment and stratification included as factors.- Provisions were included for the COVID-19 pandemic.- Administrative updates.- Changes were made to clarify that the snapshot was taken after the Week 8 Visit.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated based on the primary efficacy endpoint analysis after the first data lock.

Notes:
