Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	09 April 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 April 2021
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To investigate the efficacy of Trastuzumab Deruxtecan (DS-8201a) based on objective response rate (ORR) by independent central review based on Response Evaluation Criteria in Solid Tumors (RECIST), version (v)1.1

Protection of trial subjects:

The study protocol, amendments, the informed consent form(s) (ICF[s]), and information sheets were approved by the appropriate and applicable Independent Ethics Committees (IECs) or Institutional Review Boards (IRBs). The study was conducted in compliance with the protocol, the ethical principles that have their origin in the Declaration of Helsinki, the International Council for Harmonisation (ICH) consolidated Guideline E6 for Good Clinical Practice (GCP) (CPMP/ICH/135/95), and applicable regulatory requirement(s).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 November 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 34
Country: Number of subjects enrolled	European Union: 45
Worldwide total number of subjects	79
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	46
From 65 to 84 years	33

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details:

A total of 79 participants who met all inclusion criteria and no exclusion criteria were enrolled and treated at clinic centers in United States, Spain, Italy, United Kingdom, and Belgium. Primary results reported is from baseline up to data cut-off date of 09 April 2021.

Pre-assignment

Screening details:

A total of 89 participants were screened and 10 participants failed screening. The results presented are based on primary analysis up to 16 months. Data collection is still on-going and additional results will be provided after study completion.

Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

This was an open-label study.

Arms

Arm title	Trastuzumab Deruxtecan
-----------	------------------------

Arm description:

Participants who have centrally confirmed HER2-positive gastric or gastro-esophageal junction cancer received an intravenous (IV) infusion 6.4 mg/kg dose of trastuzumab deruxtecan every 3 weeks, until progression of disease or withdrawal from treatment for other reasons.

Arm type	Experimental
Investigational medicinal product name	DS-8201a
Investigational medicinal product code	
Other name	Trastuzumab deruxtecan
Pharmaceutical forms	Powder for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Antibody component covalently conjugated to a drug component, prepared by dilution based on body weight for intravenous (IV) infusion.

Number of subjects in period 1	Trastuzumab Deruxtecan
Started	79
Completed	23
Not completed	56
Physician decision	1
Adverse event, non-fatal	9
Death	2
Progressive Disease	39
Miscellaneous	1
Withdrawal by Subject	2

Clinical Progression	2
----------------------	---

End points

End points reporting groups

Reporting group title	Trastuzumab Deruxtecan
Reporting group description: Participants who have centrally confirmed HER2-positive gastric or gastro-esophageal junction cancer received an intravenous (IV) infusion 6.4 mg/kg dose of trastuzumab deruxtecan every 3 weeks, until progression of disease or withdrawal from treatment for other reasons.	

Primary: Percentage of Participants With Objective Response Rate (ORR) Based on Independent Central Review Following Treatment With DS8201a in Participants With HER2-Positive Unresectable or Metastatic Gastric or Gastro-Esophageal Junction (GEJ) Adenocarcinoma

End point title	Percentage of Participants With Objective Response Rate (ORR) Based on Independent Central Review Following Treatment With DS8201a in Participants With HER2-Positive Unresectable or Metastatic Gastric or Gastro-Esophageal Junction (GEJ) Adenocarcinoma ^[1]
-----------------	--

End point description:

The Objective Response Rate (ORR) was defined as the percentage of participants who achieved a best overall response of confirmed Complete Response (CR) or Partial Response (PR), assessed by independent central review (ICR) committee based on RECIST version 1.1. CR was defined as a disappearance of all target lesions and PR was defined as at least a 30% decrease in the sum of diameters of target lesions. Confirmed ORR based on ICR is reported. Objective response rate was assessed in the Full Analysis Set at data cut-off date of 09 April 2021.

End point type	Primary
----------------	---------

End point timeframe:

Up to 16 months (data cut-off)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No statistical analyses was performed.

End point values	Trastuzumab Deruxtecan			
Subject group type	Reporting group

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events (AE) were collected from the date of signing the informed consent form up to 47 days after last dose of the study drug, up 17 months.

Adverse event reporting additional description:

A Treatment-emergent adverse event (TEAE) is defined as an AE that occurs, having been absent before the first dose of study drug, or has worsened in severity or seriousness after the initiating the study drug until 47 days after last dose of the study drug.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 September 2020	Updated endpoints to provide clarification, updated study schema, updated inclusion and exclusion criteria, updated guidelines for dose modifications, updated concomitant medications, treatments, and procedures, updated treatment period section, updated PK assessments due to COVID-19 infection, updated PK, biomarker, and AE analyses to provide clarification, added instructions related to COVID-19

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
