

Clinical trial results:

A randomised, double-blind, placebo-controlled clinical trial to evaluate the efficacy and safety of PQ Grass in subjects with seasonal allergic rhinitis and/or rhinoconjunctivitis induced by grass pollen exposure

Summary

EudraCT number	2019-001517-16
Trial protocol	DE HU CZ AT PL
Global end of trial date	01 November 2023

Results information

Result version number	v1 (current)
This version publication date	16 November 2024
First version publication date	16 November 2024

Trial information

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 December 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	01 November 2023
Global end of trial reached?	Yes
Global end of trial date	01 November 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Efficacy: To evaluate the efficacy of PQ Grass 27600 SU in subjects with grass pollen induced SAR and/or rhinoconjunctivitis based on symptoms and medications.

Safety: To evaluate the safety and tolerability of PQ Grass in subjects with grass pollen induced SAR and/or rhinoconjunctivitis.

Protection of trial subjects:

The risk of anaphylaxis was mitigated by carefully selecting sites with trained personnel and specific equipment to manage anaphylaxis, by excluding high-risk participants and by providing specific instructions to participants in order to minimise the risk.

An independent Adjudication Committee was installed to evaluate any important safety information.

A Trial Oversight Committee with regular meetings was installed to oversee the safety of the participants during the conduct of the study.

Participants were monitored from the time of ICF signature throughout the study for the detection of exacerbations of pre-existing allergy symptoms.

The use of placebo was mitigated by providing subjects with relief medication during the grass pollen season and by extensive safety monitoring.

Background therapy:

Participants were provided relief medication including oral and ocular antihistamine, and nasal and oral corticosteroids.

Evidence for comparator: -

Actual start date of recruitment	22 August 2022
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 153
Country: Number of subjects enrolled	Austria: 25
Country: Number of subjects enrolled	Czechia: 67
Country: Number of subjects enrolled	Germany: 242
Country: Number of subjects enrolled	Hungary: 1
Country: Number of subjects enrolled	United States: 67
Worldwide total number of subjects	555
EEA total number of subjects	488

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	555
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The clinical trial was conducted at 89 sites (65 in Europe and 24 in the United States) and overall, 555 subjects were randomised and included in the FAS and the SAF. There was a near equal assignment of subjects to PQ Grass and placebo. One subject randomised to placebo received PQ Grass therefore, 279 subjects were treated with PQ Grass.

Pre-assignment

Screening details:

Male or female aged 18 to 65 years with a positive history of moderate to severe seasonal allergic rhinoconjunctivitis ascribed to grass pollen exposure requiring treatment for at least two consecutive seasons prior to study.

Period 1

Period 1 title	Period 1 (Screening)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	PQ Grass 27600 SU

Arm description:

6 pre-seasonal injections of active treatment (900, 2700, 6000, 6000, 6000 and 6000 SU sequentially) to achieve a cumulative nominal dose of 27600 SU

Arm type	Experimental
Investigational medicinal product name	PQ Grass
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

6 injections of active treatment (900, 2700, 6000, 6000, 6000 and 6000 SU sequentially) to achieve a cumulative nominal dose of 27600 SU

Arm title	Placebo
------------------	---------

Arm description:

6 pre-seasonal injections of placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in vial
Routes of administration	Subcutaneous use

Dosage and administration details:

6 doses of placebo

Number of subjects in period 1	PQ Grass 27600 SU	Placebo
Started	278	277
Completed	278	277

Period 2

Period 2 title	Period 2 (randomisation and treatment)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer

Arms

Are arms mutually exclusive?	Yes
Arm title	PQ Grass 27600 SU

Arm description:

6 pre-seasonal injections of active treatment (900, 2700, 6000, 6000, 6000 and 6000 SU sequentially) to achieve a cumulative nominal dose of 27600 SU

Arm type	Experimental
Investigational medicinal product name	PQ Grass
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Suspension for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

6 injections of active treatment (900, 2700, 6000, 6000, 6000 and 6000 SU sequentially) to achieve a cumulative nominal dose of 27600 SU

Arm title	Placebo
------------------	---------

Arm description:

6 pre-seasonal injections of placebo

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

6 injections of placebo

Number of subjects in period 2	PQ Grass 27600 SU	Placebo
Started	278	277
Completed	250	257
Not completed	28	20
Consent withdrawn by subject	6	4
Adverse event, non-fatal	4	5
Sponsor request	2	3
Study terminated by sponsor	3	3
other, unknown	12	4
Lost to follow-up	1	1

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AE reporting was performed throughout the study, which had an overall duration of 387 days.

Adverse event reporting additional description:

One subject randomised to placebo received PQ Grass throughout the trial, consequently 279 subjects were treated with PQ Grass and 276 subjects with placebo; results are based on treatment received.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 November 2022	Version 3.0_Global was created to harmonize the protocol so that all the updates included in the different versions of the protocol (as stipulated in the tables below) that are currently in use in the different regions can be in one global version. Furthermore, additional updates were made to the Version 3.0_Global clinical trial protocol as indicated in the table below. Administrative edits were also made as needed all through the document.
20 June 2023	Version 4.0_Global was created to incorporate an interim analysis in the ongoing clinical trial and to provide the option of a second season (Year 2) for the clinical trial if needed as it was not possible to recruit the initially planned number of subjects within one year (Year 1). The amendment includes a description of the changes if a second season will become part of the trial, and it describes the process for an interim analysis that is planned to be performed based on Year 1 data. Administrative edits were also made as needed all through the document.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
