Clinical trial results:
An Open-label Extension Trial to Investigate the Long term Safety of Cannabidiol Oral Solution (GWP42003-P, CBD-OS) in Patients with Rett Syndrome

Summary

EudraCT number	2019-001605-24
Trial protocol	GB ES IT
Global end of trial date	09 June 2021

Results information

Result version number	v1 (current)
This version publication date	24 December 2021
First version publication date	24 December 2021

Trial information

Trial identification

Sponsor protocol code	GWND19002

Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04252586
WHO universal trial number (UTN)	-

Notes:

Sponsors

Sponsor organisation name	GW Research Ltd
Sponsor organisation address	Sovereign House, Vision Park, Chivers Way, Histon, Cambridge, United Kingdom, CB24 9BZ

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMEA-001964-PIP02-19
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	08 November 2021
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	09 June 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of the study was to evaluate the long-term safety of cannabidiol oral solution (GWP42003-P) in participants with Rett syndrome.

Protection of trial subjects:

This study was conducted in compliance with International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	28 February 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 8
Country: Number of subjects enrolled	United Kingdom: 5
Country: Number of subjects enrolled	United States: 8
Worldwide total number of subjects	21
EEA total number of subjects	8

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	13
Adolescents (12-17 years)	3
Adults (18-64 years)	5
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants who had participated in the randomized, double-blind, placebo-controlled parent study GWND18064 (NCT03848832/ 2018-003370-27) entered in this open label extension study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Arm title	GWP42003-P

Arm description:

Participants were administered with 5 mg/kg/day GWP42003-P orally for 1 week. Depending on clinical response and tolerability, the participants' dose was increased in weekly increments of 5 mg/kg/day up to 15 mg/kg/day GWP42003-P. Participants then remained on a stable dose of GWP42003-P for the duration of the maintenance period of the trial (up to 104 weeks), with an option for doses to be decreased or increased to a maximum dose of 20 mg/kg/day, as deemed necessary by the investigator.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	Cannabidiol
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

GWP42003-P oral solution (100 mg/mL) was administered twice daily as morning and evening doses based on participant's body weight.

Number of subjects in period 1	GWP42003-P
Started	21
Completed	0
Not completed	21
Adverse event, serious fatal	2
Did Not Complete Treatment Period	1
Adverse event, non-fatal	1
Study Terminated By Sponsor	4
Withdrawal By Parent/Guardian	3
Sponsor Request	10

Primary: Number of participants with any treatment emergent adverse event (TEAEs), Serious AEs (SAEs), Deaths, Discontinuations Due to AEs, Treatment-related AEs

End point title	Number of participants with any treatment emergent adverse event (TEAEs), Serious AEs (SAEs), Deaths, Discontinuations Due to AEs, Treatment-related AEs[1]

End point description:

Adverse events (AEs) were defined as any new unfavorable/unintended signs/symptoms (including abnormal laboratory findings when relevant) or diagnosis or worsening of a pre-existing condition that occurs during the study. TEAEs were defined as the AEs that started or worsened in severity or seriousness following the first dose of GWP42003-P. Any AEs occurring between last dose of parent study (GWND18064) and this extension study visit 1 were not considered as TEAEs. The analysis was conducted on Safety Analysis Set defined as all participants who received at least one dose of GWP42003-P in the study.

End point type	Primary

End point timeframe:

Up to approximately 475 days (End of Treatment + 30 days)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.
Justification: Only descriptive statistics was planned for this primary safety endpoint.

End point values	GWP42003-P			
Subject group type	Reporting group			
Number of subjects analysed	21			
Units: participants				
number (not applicable)				
TEAEs	19			
SAEs	5			
Deaths	2

Secondary: Mean Clinical Global Impressions-Improvement (CGI-I) Continuous Score

End point title	Mean Clinical Global Impressions-Improvement (CGI-I) Continuous Score

End point description:

CGI-I is a 7-point scale that requires the clinician to assess how much a participant's illness has improved or worsened relative to a Baseline state at the beginning of the intervention. This was rated as: 1 = very much improved; 2 = much improved; 3 = minimally improved; 4 = no change; 5 = minimally worse; 6 = much worse; or 7 = very much worse. Baseline of the parent study GWND18064 (NCT03848832) was used as baseline. This analysis included participants of safety set without baseline assessment but with post-baseline assessment. At each visit, all participants without missing assessment were included.

End point type	Secondary

Secondary: Change from Baseline in Rett Syndrome Behaviour Questionnaire (RSBQ) Overall score at End of Treatment

End point title	Change from Baseline in Rett Syndrome Behaviour Questionnaire (RSBQ) Overall score at End of Treatment

End point description:

RSBQ is a caregiver-completed questionnaire that assess the overall condition (45 items) in individuals with Rett Syndrome. Each item (except Item 31) is rated on a 3-point scale (0-2); 0 indicating an item that is "not true as far as you know," 1 indicating an item is "somewhat or sometimes true," and 2 indicating an item that is "very true or often true". Item 31 is to be reverse scored. The total summed score ranges from 0 to 90, and higher total scores represent greater severity. Baseline of the randomized clinical study (GWND18064 - NCT03848832) was used as baseline for the change from baseline calculation. Change from baseline at one specific visit included all participants without missing baseline and missing assessment at this specific visit. This analysis includes participants of safety set without baseline assessment but with post-baseline assessment. At each visit, all participants without missing assessment were included.

End point type	Secondary

End point timeframe:

Baseline, End of Treatment (up to Day 442)

End point values	GWP42003-P			
Subject group type	Reporting group

Units: units on a scale				
arithmetic mean (standard deviation)				
Baseline	46.7 (± 12.05)			
CFB at End of Treatment	-7.4 (± 14.93)			

Statistical analyses

No statistical analyses for this end point

Secondary: Change from Baseline in Mean Clinician Global Impressions - Severity Scale (CGI-S) Continuous Score at End of Treatment

End point title	Change from Baseline in Mean Clinician Global Impressions - Severity Scale (CGI-S) Continuous Score at End of Treatment

End point description:

CGI-S is a 7-point scale that requires the clinician to rate the severity of the participant's illness at the time of assessment relative to the clinician's experience with participants who had the same diagnosis. This was rated as: 1 = normal, not at all ill; 2 = borderline ill; 3 = mildly ill; 4 = moderately ill; 5 = markedly ill; 6 =severely ill; or 7 = extremely ill. Baseline of the parent study- GWND18064 (NCT03848832) was used as baseline for the change from baseline calculation. Change from baseline at one specific visit included all participants without missing baseline and missing assessment at this specific visit. This analysis included participants of safety set without baseline assessment but with post-baseline assessment. At each visit, all participants without missing assessment were included.

No statistical analyses for this end point

Secondary: Change from Baseline in Mean Children's Sleep Habits Questionnaire (CSHQ) Total Score at End of Treatment

End point title	Change from Baseline in Mean Children's Sleep Habits Questionnaire (CSHQ) Total Score at End of Treatment

End point description:

The CSHQ is a caregiver-completed sleep screening instrument designed for school-aged children, including 33 items within 8 subscales: bedtime resistance, sleep onset delay, sleep duration, sleep anxiety, night wakings, parasomnias, sleep-disordered breathing, daytime sleepiness. Item scores range from 1-3: where 3=usually; for 5 or more times a week, 2=sometimes; for 2-4 times a week, 1=rarely; for never or 1 time/week, while 5 items are reverse scored. Total summed score range: 33-99; higher scores reflect more disturbed sleep behavior. Baseline of the parent study GWND18064 (NCT03848832) was used as baseline for the change from baseline calculation. Change from baseline (CFB) at one specific visit included all participants without missing baseline and missing assessment at this specific visit. This analysis included participants of safety set without baseline assessment but with post-baseline assessment. At each visit, participants without missing assessment were included.

Secondary: Change from Baseline in 9-item Mean Motor Behavioral Assessment (MBA-9) Total Score at End of Treatment

End point title	Change from Baseline in 9-item Mean Motor Behavioral Assessment (MBA-9) Total Score at End of Treatment

End point description:

MBA-9 is derived from the full MBA scale (37 Rett syndrome symptoms) by selecting the items deemed amenable to change and which reflected areas of meaningful clinical change. The severity of current symptoms is rated by the investigator on a 5-point numerical scale; (0 =normal or never;1 =mild or rare;2 =moderate or occasional; 3 =marked or frequent; 4 =very severe or constant). The MBA-9 total score is calculated by summing the scores of the 9 individual items. Total score range: 0-36; higher total scores represent greater severity. Baseline of the parent study- GWND18064 (NCT03848832) was used as baseline for the change from baseline calculation. Change from baseline (CFB) at one specific visit included all participants without missing baseline and missing assessment at this specific visit. This analysis includes participants of safety set without baseline assessment but with post-baseline assessment. At each visit, all participants without missing assessment were included.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Up to approximately 475 days (End of Treatment + 30 days)

Adverse event reporting additional description:

A treatment-emergent adverse event (TEAE) are defined as the AEs that started or worsened in severity or seriousness following the first dose of GWP42003-P. Any AEs occuring between last dose of parent study (GWND18064) and this extension study visit 1 were not considered as TEAEs. The analysis was conducted in safety analysis set.

Assessment type	Systematic

Reporting groups

Reporting group title	GWP42003-P

Reporting group description:

Participants received GWP42003-P (5 mg/kg/day]) for 1 week. Depending on clinical response and tolerability, the participants' dose was increased in weekly increments of 5 mg/kg/day up to 15 mg/kg/day GWP42003-P. Participant remained on a stable dose of GWP42003-P for the duration of the maintenance period of the trial (up to 104 weeks), with the option for doses to be decreased or increased to a maximum dose of 20 mg/kg/day based on clinical response and tolerability, as deemed necessary by the investigator.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 May 2020	The purpose of the amendment was to define the entry criteria for participants who were affected by COVID-19 pandemic containment measures during their participation in the parent Study GWND18064: • Allowance for participants to enroll into GWND19002 after the point of GWND18064 follow-up. • Allowance for participants who withdrew from GWND18064 due to COVID-19 pandemic containment measures to enroll into GWND19002 at a later date, when appropriate.
11 November 2020	The purpose of the amendment was to define the entry criteria for participants who were affected by COVID-19 pandemic containment measures during their participation in the parent study GWND18064 or withdrew from GWND18064 due to sponsor administrative decision: • Allowance for participants to enroll into GWND19002 after the point of GWND18064 follow-up. • Allowance for participants who withdrew from GWND18064 due to COVID-19 pandemic containment measures or withdrew from GWND18064 due to sponsor administrative decision to enroll into GWND19002 at a later date, when appropriate.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

This trial was terminated due to enrolment challenges and the COVID-19 pandemic. Due to early termination and participant's withdrawal, the number of participants was small, the length of treatment was reduced, which limited data interpretation.

Notes:
