Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To assess the efficacy of LNP023 compared with rituximab.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Primary: Ratio between baseline Urine Protein Creatinine Ratio (UPCR) and Urine Protein Creatinine Ratio at 24 weeks of treatment (from 24h urine collection)

End point title	Ratio between baseline Urine Protein Creatinine Ratio (UPCR) and Urine Protein Creatinine Ratio at 24 weeks of treatment (from 24h urine collection) ^[1]
-----------------	---

End point description:

The primary endpoint of this study is the ratio between UPCR at 24 weeks of treatment measured in 24h urine and baseline UPCR .

To assess the primary objective, the log-transformed ratio to baseline in UPCR was analyzed using a mixed model for repeated measures (MMRM). The results were back transformed and presented on the original scale.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were reported from first dose of study treatment until end of study treatment plus 29 weeks post treatment, up to maximum duration of 53 weeks.

Adverse event reporting additional description:

Any sign or symptom that occurs during the conduct of the trial and the safety follow-up.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 March 2021	The main purpose of the global amendment was to align with study results obtained from ongoing trials with LNP023 in other indications which support best efficacy results with LNP023 at dose levels of 200mg b.i.d. LNP023 low dose arm (10/50mg) was removed from this study and the first portion of the high dose arm was modified from 25 to 50mg b.i.d for 4 weeks.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Due to EudraCT system limitations, which EMA is aware of, data using 999 as data points in this record are not an accurate representation of the clinical trial results. Please use <https://www.novctrd.com/CtrdWeb/home.nov> for complete trial results.
