

Clinical trial results:

A phase IIIB, open label, long term follow-up study to assess persistence of immune responses to GSK's HZ/su vaccine 4-7 years after primary vaccination; and immunogenicity and safety assessment of revaccination with 2 additional doses of HZ/su vaccine, administered 1-2 months apart, 6-8 years after primary vaccination of adults with renal transplant from study ZOSTER-041

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	24 October 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	27 June 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Long term follow-up (LTFU) phase - Immunogenicity assessment:

- To evaluate persistence of humoral immunity after primary vaccination course.

Revaccination active phase - Immunogenicity assessment:

- To evaluate humoral immunity of HZ/su vaccine post-revaccination Doses 1 & 2.

Protection of trial subjects:

An internal Safety Review Team oversaw the safety and wellbeing of the study participants.

All participants were supervised/observed for 30 mins after vaccine administration with appropriate medical treatment readily available in case of serious allergic reaction to vaccination.

Study procedures including vaccine administration and blood sampling were performed by qualified/trained personnel.

Study vaccine was administered only to eligible participants that had no contraindications to any components of the vaccine.

Participants were followed up for 2 years in the LTFU phase of the current extension ZOSTER-073 study, representing up to 6-8 years after the vaccination in the primary ZOSTER-041 study.

Also, participants were followed up for 24 months after the second revaccination dose received in the current ZOSTER-073 study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	09 December 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Regulatory reason
Long term follow-up duration	2 Years
Independent data monitoring committee (IDMC) involvement?	No

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Canada: 7
Country: Number of subjects enrolled	Finland: 3
Country: Number of subjects enrolled	Korea, Republic of: 10
Country: Number of subjects enrolled	Panama: 3
Country: Number of subjects enrolled	Spain: 40
Country: Number of subjects enrolled	Taiwan: 3
Worldwide total number of subjects	68
EEA total number of subjects	45

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	47
From 65 to 84 years	20
85 years and over	1

Subject disposition

Recruitment

Recruitment details:

Eligible participants from the Herpes Zoster (HZ/su) treatment group of ZOSTER-041 (NCT02058589) study who had a complete primary vaccination course (2 doses of HZ/su vaccine) were offered enrollment in the current ZOSTER-073 study (NCT04176939). A total of 68 participants met the eligibility criteria and consented to participate in this study.

Pre-assignment

Screening details:

Out of the 68 participants originally enrolled in the current ZOSTER-073 study (Enrolled Set), 21 participants did not receive any revaccination doses, hence only 47 participants were vaccinated with at least one revaccination dose and included in the Exposed Set for revaccination phase in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

This is an open-label study with one treatment group.

Arms

Arm title	HZ/su Group
-----------	-------------

Arm description:

Participants with renal transplant who completed the 2-dose Herpes Zoster (HZ/su) vaccination course in the primary ZOSTER-041 (NCT02058589) study were enrolled in the current ZOSTER-073 (NCT04176939) study.

47 of these participants further received 1 or 2 additional doses of HZ/su vaccine in the revaccination phase of the current ZOSTER-073 (NCT04176939) study, first dose at Month 24 and second dose at Month 25.

Arm type	Experimental
Investigational medicinal product name	HZ/su vaccine
Investigational medicinal product code	
Other name	GSK1437173A
Pharmaceutical forms	Powder and suspension for suspension for injection
Routes of administration	Intramuscular use

Dosage and administration details:

2 additional doses of the HZ/su vaccine were administered intramuscularly at Month 24 and at Month 25 in the revaccination phase of the study.

Number of subjects in period 1	HZ/su Group
Started	68
Revaccinated	47 ^[1]
Completed	49
Not completed	19
Adverse Event Requiring Expedited Reporting	7
Consent withdrawn by subject	5

Migrated / Moved From The Study Area	1
Unspecified reason	4
Lost to follow-up	2

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Out of the 68 participants originally enrolled in the current ZOSTER-073 study (Enrolled Set), only 47 participants were vaccinated with at least one revaccination dose and included in the Exposed Set for revaccination phase in this study.

Baseline characteristics

Reporting groups

Reporting group title	HZ/su Group

End points

End points reporting groups

Reporting group title	HZ/su Group
Reporting group description:	
Participants with renal transplant who completed the 2-dose Herpes Zoster (HZ/su) vaccination course in the primary ZOSTER-041 (NCT02058589) study were enrolled in the current ZOSTER-073 (NCT04176939) study.	
47 of these participants further received 1 or 2 additional doses of HZ/su vaccine in the revaccination phase of the current ZOSTER-073 (NCT04176939) study, first dose at Month 24 and second dose at Month 25.	

Primary: Anti-glycoprotein E (anti-gE) antibody concentrations, as assessed in the Long term follow-up (LTFU) phase of the current ZOSTER-073 study

End point title	Anti-glycoprotein E (anti-gE) antibody concentrations, as assessed in the Long term follow-up (LTFU) phase of the current ZOSTER-073 study ^[1]
-----------------	---

End point description:

Anti-gE antibody concentrations were determined by enzyme-linked immunosorbent assay (ELISA) and expressed as geometric mean concentrations (GMCs) in milli-international units per milliliter (mIU/mL). Analysis was performed on the Per Protocol Set for analysis of persistence (LTFU phase), which included evaluable participants from the Enrolled Set with a complete vaccination course (2 doses of HZ/su vaccine) in the ZOSTER-041 study, who met the eligibility criteria and signed informed consent in the current study and for whom persistence immunogenicity results after primary vaccination course were available at the specified time points in the current study, regardless of revaccination status.

End point type	Primary
----------------	---------

End point timeframe:

At Day 1, Month 12 and Month 24 (pre-revaccination) in the current ZOSTER-073 study

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

End point values	HZ/su Group			
Subject group type	Reporting group			
Number of subjects analysed	60			
Units: mIU/mL				
geometric mean (confidence interval 95%)				
At Day 1 (N=56)	3729.8 (2736.2 to 5084.0)			
At Month 12 (N=60)	3440.2 (2499.0 to 4735.7)			
At Month 24 (N=49)	3075.8 (2091.8 to 4522.8)			

Statistical analyses

Primary: Anti-gE antibody concentrations, as assessed in the Revaccination active phase of the current ZOSTER-073 study

End point title	Anti-gE antibody concentrations, as assessed in the Revaccination active phase of the current ZOSTER-073 study ^[2]
-----------------	---

End point description:

Anti-gE antibody concentrations were determined by ELISA and expressed as GMCs in mIU/mL. Analysis was performed on the Per Protocol Set for Immunogenicity after revaccination course (Revaccination active phase), which included evaluable participants who were administered 1 or 2 doses of revaccination as per the revaccination schedule and who had immunogenicity data available for the specified analysis at the specified time points in the current study.

End point type	Primary
----------------	---------

End point timeframe:

At Month 24 (pre-revaccination), Month 25 (1 month post-revaccination Dose 1) and Month 26 (1 month post-revaccination Dose 2) in the current ZOSTER-073 study

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The analysis of the primary endpoint was descriptive i.e. no statistical hypothesis test was performed.

End point values	HZ/su Group			
Subject group type	Reporting group			
Number of subjects analysed	45			
Units: mIU/mL				
geometric mean (confidence interval 95%)				
At Month 24 (N=45)	2828.5 (1886.6 to 4240.5)			
At Month 25 (N=44)	27655.5 (17882.7 to 42769.1)			
At Month 26 (N=44)	31517.0 (21581.1 to 46027.3)

Secondary: Duration in days of solicited administration site events after each revaccination, as assessed in the Revaccination active phase of the current ZOSTER-073 study

End point title	Duration in days of solicited administration site events after each revaccination, as assessed in the Revaccination active phase of the current ZOSTER-073 study
-----------------	--

End point description:

Duration is the number of days in which a participant experienced the solicited administration site event within the 7-day solicited follow-up period. Assessed solicited administration site events included erythema, pain and swelling at injection site.

Analysis was performed on the Exposed Set for revaccination phase, which included participants with at least one HZ/su revaccination dose administered in the current study, with solicited diary data available after the corresponding revaccination, who experienced the specified solicited administration site event within 7 days following the respective revaccination dose and with the duration documented.

End point type	Secondary
----------------	-----------

End point timeframe:

Within 7 days after each revaccination dose (administered at Month 24 [Dose 1] and at Month 25 [Dose 2]) in the current ZOSTER-073 study

End point values	HZ/su Group			
Subject group type	Reporting group			
Number of subjects analysed	37			
Units: Days				
median (inter-quartile range (Q1-Q3))				
Erythema, after revacc. Dose 1 (N=9)	4.0 (1.0 to 5.0)			
Pain, after revacc. Dose 1 (N=37)	3.0 (2.0 to 4.0)			
Swelling, after revacc. Dose 1 (N=6)	3.0 (2.0 to 3.0)			
Erythema, after revacc. Dose 2 (N=6)	3.0 (2.0 to 3.0)			
Pain, after revacc. Dose 2 (N=31)	2.0 (2.0 to 3.0)			
Swelling, after revacc. Dose 2 (N=4)	2.5 (1.5 to 3.5)

Secondary: Number of participants with any, Grade 3 and related solicited systemic events after each revaccination, as assessed in the Revaccination active phase of the current ZOSTER-073 study

End point title	Number of participants with any, Grade 3 and related solicited systemic events after each revaccination, as assessed in the Revaccination active phase of the current ZOSTER-073 study
-----------------	--

End point description:

Assessed solicited systemic events included fatigue, gastrointestinal symptoms (including nausea, vomiting, diarrhea and/or abdominal pain), headache, myalgia, shivering and fever (temperature $\geq 38.0^{\circ}\text{C}/100.4^{\circ}\text{F}$). Any AE = occurrence of the event regardless of intensity grade. Grade 3 fatigue, gastrointestinal symptoms, headache, myalgia, shivering = event that prevented normal, everyday activities. Grade 3 fever = temperature $>39^{\circ}\text{C}/102.2^{\circ}\text{F}$. Related fatigue, gastrointestinal symptoms, headache, myalgia, shivering, fever = event assessed by the investigator as related to the revaccination. The preferred route for measuring temperature in this study was oral. Analysis was performed on the Exposed Set for revaccination phase, which included all participants with at least one HZ/su revaccination dose administered in the current study and with the solicited systemic events diary card data available after the corresponding revaccination, for the specified duration.

End point type	Secondary
----------------	-----------

End point timeframe:

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Solicited AEs: Within 7 days & Unsolicited AEs: Within 30 days, after any revaccination; SAEs & pIMDs: from Month 24 until Month 37; Deaths, Related SAEs and biopsy-proven allograft rejections: from Day 1 until Month 49, in the current ZOSTER-073 study.

Adverse event reporting additional description:

As pre-specified in Protocol, deaths and events presented in the SAEs module were assessed in both non-revaccinated and revaccinated participants from the Enrolled Set. In this study, only revaccinated participants from the Exposed Set had their events in the Non-SAEs module assessed, and non-SAEs were not assessed in non-revaccinated participants.

Assessment type	Systematic

Frequency threshold for reporting non-serious adverse events: 0 %

Non-serious adverse events	HZ/su Group		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	43 / 68 (63.24%)		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			
Seborrhoeic keratosis			
subjects affected / exposed ^[1]	1 / 47 (2.13%)		
occurrences (all)	1		
Nervous system disorders			
Headache			
subjects affected / exposed ^[2]	27 / 47 (57.45%)		
occurrences (all)	39		
General disorders and administration site conditions			
Chills			
subjects affected / exposed ^[3]	19 / 47 (40.43%)		
occurrences (all)	25		
Fatigue			
subjects affected / exposed ^[4]	31 / 47 (65.96%)		
occurrences (all)	50		
Administration site pain			
subjects affected / exposed ^[5]	40 / 47 (85.11%)		
occurrences (all)	68		
Administration site swelling			
subjects affected / exposed ^[6]	16 / 47 (34.04%)		
occurrences (all)	25		
Administration site erythema			
subjects affected / exposed ^[7]	14 / 47 (29.79%)		
occurrences (all)	22		
Pyrexia			
subjects affected / exposed ^[8]	6 / 47 (12.77%)		
occurrences (all)	9		
Peripheral swelling			
subjects affected / exposed ^[9]	1 / 47 (2.13%)		
occurrences (all)	1		
Injection site pruritus			

subjects affected / exposed ^[10] occurrences (all)	1 / 47 (2.13%) 1		
Eye disorders Blindness subjects affected / exposed ^[11] occurrences (all)	1 / 47 (2.13%) 1		
Visual impairment subjects affected / exposed ^[12] occurrences (all)	1 / 47 (2.13%) 1		
Gastrointestinal disorders Constipation subjects affected / exposed ^[13] occurrences (all)	1 / 47 (2.13%) 1		
Gastrointestinal disorder subjects affected / exposed ^[14] occurrences (all)	16 / 47 (34.04%) 21		
Skin and subcutaneous tissue disorders Eczema subjects affected / exposed ^[15] occurrences (all)	1 / 47 (2.13%) 1		
Musculoskeletal and connective tissue disorders Myalgia subjects affected / exposed ^[16] occurrences (all)	26 / 47 (55.32%) 41		
Infections and infestations COVID-19 subjects affected / exposed ^[17] occurrences (all)	3 / 47 (6.38%) 3		
Onychomycosis subjects affected / exposed ^[18] occurrences (all)	1 / 47 (2.13%) 1		
Metabolism and nutrition disorders Gout subjects affected / exposed ^[19] occurrences (all)	1 / 47 (2.13%) 1		

Notes:

[1] - The number of subjects exposed to this adverse event is less than the total number of subjects

Justification: In this study, only revaccinated participants from the Exposed Set had their events in the Non-SAEs module assessed, and non-SAEs were not assessed in non-revaccinated participants.

[18] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: In this study, only revaccinated participants from the Exposed Set had their events in the Non-SAEs module assessed, and non-SAEs were not assessed in non-revaccinated participants.

[19] - The number of subjects exposed to this adverse event is less than the total number of subjects exposed for the reporting group. These numbers are expected to be equal.

Justification: In this study, only revaccinated participants from the Exposed Set had their events in the Non-SAEs module assessed, and non-SAEs were not assessed in non-revaccinated participants.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 June 2020	The purpose of the amendment was to: <ul style="list-style-type: none">• Outline measures to be applied during special circumstances (e.g., COVID-19 pandemic), to protect participant's welfare and safety, and, as far as possible, to ensure the potential benefit to the participant and promote study integrity.• Define study procedures/assessments to allow participation of non-revaccinated participants in an extended long-term follow-up phase.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
18 March 2020	The trial was put on temporary global enrollment hold due to COVID-19 restrictions. Delayed enrollees were enrolled at Visit 2 and hence missed their Visit 1 blood draw.	07 October 2020

Notes:

Limitations and caveats
