

Clinical trial results:

A Phase 1b/2 Randomised, Placebo-controlled, Dose-ranging Study to Evaluate Safety, Tolerability and Immunogenicity of a Chimpanzee Adenovirus (ChAdOx1)-vectored Multigenotype High Risk Human Papillomavirus (hrHPV) Vaccine and Modified Vaccinia Ankara (MVA)-vectored Multigenotype hrHPV Vaccine in Women with Low-grade HPV-related Cervical Lesions

Summary

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 October 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 February 2024
Global end of trial reached?	Yes
Global end of trial date	15 February 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To determine the safety and tolerability of ChAdOx1-HPV plus MVA-HPV vaccines when administered in a prime boost regimen.

Protection of trial subjects:

The trial focused on hrHPV-positive participants with low-grade cervical lesions, reflecting the standard care of monitoring rather than immediate intervention. A lead-in phase with a dose-escalation design in a small participant group minimized exposure to poorly tolerated doses. Safety and tolerability data were reviewed at each dose adjustment, with an additional review before transitioning to the main phase.

The main phase used a parallel-group, randomised, placebo-controlled design to assess dose-dependent safety, efficacy, and immunogenicity, with treatments administered in a blinded fashion to minimize bias. Standard safety assessments included monitoring adverse events, lab tests, vital signs, and physical exams. Participants reported foreseeable adverse events via an eDiary for 3 days post-dose, supplemented by in-clinic assessments.

Defined grading scales assessed symptom severity and lab abnormalities, with pre-established trial stopping/holding criteria triggering Data Monitoring Committee (DMC) reviews. Individual stopping criteria allowed for participant withdrawal if needed. Diagnostic procedures, including colposcopy with biopsy, HPV swabbing, and cervical cytobrush sampling, followed established clinical standards to ensure participant safety and accurate monitoring throughout the trial.

Background therapy:

N/A

Evidence for comparator:

The placebo was 0.9% normal saline. The parallel-group, randomised, placebo-controlled design used in the main phase was used to allow for an examination of any dose-dependent effects on safety, efficacy and immunogenicity and compared to placebo. This design made it possible to obtain unbiased inferences about differences between treatments. Treatments were administered in a blinded fashion with the Sponsor, CRO, Investigator, trial team members performing safety assessments beyond randomisation and participant unaware of the treatment identity to further minimise any potential bias in the overall assessment.

Actual start date of recruitment	16 March 2021
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Ethical reason, Regulatory reason, Scientific research
Long term follow-up duration	12 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 49
Country: Number of subjects enrolled	Belgium: 39
Country: Number of subjects enrolled	Estonia: 20
Worldwide total number of subjects	108
EEA total number of subjects	59

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	108
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This multicentre trial of VTP-200 had 3 phases across 16 European sites. The lead-in phase (9 participants) tested dose escalation. The main phase (99 participants) compared different doses of ChAdOx1-HPV and MVA-HPV to placebo. The expansion phase was planned but cancelled after Month 12 data analysis showed no clear efficacy signal.

Pre-assignment

Screening details:

Participants were screened between Day -42 and Day -1, with consent obtained before procedures. They received either ChAdOx1-HPV on Day 0 and MVA-HPV on Day 28 or placebo on both days, depending on their phase and group allocation.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Assessor

Blinding implementation details:

In the main phase, participants, safety assessors, and most trial team members were blinded to treatment. Staff preparing and administering the drug, an unblinded CRO pharmacy monitor, and the statistician handling randomisation and interim analyses were not blinded. Blinding was preserved through strict procedures in the Site Blinding Plan and Pharmacy Manual, with separate filing systems preventing access to treatment allocations by blinded staff.

Arms

Are arms mutually exclusive?	Yes
Arm title	Main Phase Group 1

Arm description:

Main Phase Group 1, ChAdOx1-HPV 2×10^9 vp on Day 0, and MVA-HPV 1×10^7 pfu on Day 28

Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV 2×10^9 vp and MVA-HPV 1×10^7 pfu
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection

Dosage and administration details:

ChAdOx1-HPV 2×10^9 vp and MVA-HPV 1×10^7 pfu. Both doses were given by intramuscular injection into the deltoid muscle

Arm title	Main Phase Group 2
------------------	--------------------

Arm description:

Main Phase Group 2, ChAdOx1-HPV 2×10^{10} vp on Day 0 and MVA-HPV 1×10^7 pfu on Day 28

Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV 2×10^{10} vp and MVA-HPV 1×10^7 pfu
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection

Dosage and administration details:

ChAdOx1-HPV 2×10^{10} vp and MVA-HPV 1×10^7 pfu. Both doses were given by intramuscular injection into the deltoid muscle

Arm title	Main Phase Group 3
Arm description: Main Phase Group 3, ChAdOx1-HPV 2 x 10 ⁸ vp on Day 0, and MVA-HPV 1 x 10 ⁸ pfu on Day 28	
Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV 2 x 10 ⁸ vp and MVA-HPV 1 x 10 ⁸ pfu
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection
Dosage and administration details: ChAdOx1-HPV 2 x 10 ⁸ vp and MVA-HPV 1 x 10 ⁸ pfu. Both doses were given by intramuscular injection into the deltoid muscle	
Arm title	Main Phase Group 4
Arm description: Main Phase Group 4, ChAdOx1-HPV 2 x 10 ⁹ vp on Day 0, and MVA-HPV 1 x 10 ⁸ pfu on Day 28	
Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV 2 x 10 ⁹ vp and MVA-HPV 1 x 10 ⁸ pfu
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection
Dosage and administration details: ChAdOx1-HPV 2 x 10 ⁹ vp and MVA-HPV 1 x 10 ⁸ pfu. Both doses were given by intramuscular injection into the deltoid muscle	
Arm title	Main Phase Group 5
Arm description: Main Phase Group 5 ChAdOx1-HPV 2 x 10 ¹⁰ vp on Day 0, and MVA-HPV 1 x 10 ⁸ pfu on Day 28	
Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV 2 x 10 ¹⁰ vp and MVA-HPV 1 x 10 ⁸ pfu
Investigational medicinal product code	VTP-200
Other name	N/A
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection
Dosage and administration details: ChAdOx1-HPV 2 x 10 ¹⁰ vp and MVA-HPV 1 x 10 ⁸ pfu. Both doses were given by intramuscular injection into the deltoid muscle	
Arm title	Main Phase Group 6
Arm description: Placebo on Day 0 and Day 28	
Arm type	Placebo
Investigational medicinal product name	1x 0.25mL placebo 0.9% saline injection at day 0 and 1x 0.5mL placebo injection at day 28
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Injection , Intramuscular use
Dosage and administration details: 1x 0.25mL placebo 0.9% saline injection at day 0 and 1x 0.5mL placebo injection at day 28. Both doses were given by intramuscular injection into the deltoid muscle	
Arm title	Lead-in Group A
Arm description: ChAdOx1-HPV 2 x 10 ⁸ vp on Day 0, and MVA-HPV 1 x 10 ⁷ pfu on Day 28	

Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV and MVA-HPV
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection

Dosage and administration details:

ChAdOx1-HPV 2×10^8 vp and MVA-HPV 1×10^7 pfu. Both doses were given by intramuscular injection into the deltoid muscle.

Arm title	Lead-in Group B
------------------	-----------------

Arm description:

ChAdOx1-HPV 2×10^9 vp on Day 0, and MVA-HPV 1×10^7 pfu on Day 28

Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV and MVA-HPV
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection

Dosage and administration details:

ChAdOx1-HPV 2×10^9 vp and MVA-HPV 1×10^7 pfu. Both doses were given by intramuscular injection into the deltoid muscle

Arm title	Lead-in Group C
------------------	-----------------

Arm description:

ChAdOx1-HPV 2×10^{10} vp on Day 0, and MVA-HPV 1×10^8 pfu on Day 28

Arm type	Experimental
Investigational medicinal product name	ChAdOx1-HPV and MVA-HPV
Investigational medicinal product code	VTP-200
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intramuscular use, Injection

Dosage and administration details:

ChAdOx1-HPV 2×10^{10} vpMVA-HPV 1×10^8 pfu. Both doses were given by intramuscular injection into the deltoid muscle

Reporting group description:

Safety Analysis Set

Serious adverse events	Overall Trial		
Total subjects affected by serious adverse events			
subjects affected / exposed	2 / 108 (1.85%)		
number of deaths (all causes)	0		
number of deaths resulting from adverse events	0		
Immune system disorders			
Cholelithiasis			
subjects affected / exposed	1 / 108 (0.93%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		
Psychiatric disorders			
Schizophrenia			
subjects affected / exposed	1 / 108 (0.93%)		
occurrences causally related to treatment / all	0 / 1		
deaths causally related to treatment / all	0 / 0		

Frequency threshold for reporting non-serious adverse events: 1 %

Non-serious adverse events	Overall Trial		
Total subjects affected by non-serious adverse events			
subjects affected / exposed	82 / 108 (75.93%)		
Neoplasms benign, malignant and unspecified (incl cysts and polyps)			

Basal cell carcinoma, Fibroadenoma of breast subjects affected / exposed occurrences (all)	2 / 108 (1.85%) 2		
Vascular disorders Hypertension, Hypotension subjects affected / exposed occurrences (all)	2 / 108 (1.85%) 2		
General disorders and administration site conditions Chills, Drug withdrawal syndrome, Fatigue, Influenza like illness, Injection site bruising subjects affected / exposed occurrences (all)	12 / 108 (11.11%) 15	Additional description: Injection site pain, Non-cardiac chest pain, Pyrexia, Vaccination site pain, Vaccination site paraesthesia	
Immune system disorders Seasonal allergy subjects affected / exposed occurrences (all)	2 / 108 (1.85%) 2		
Reproductive system and breast disorders Cervical polyp, Coital bleeding, Dysmenorrhoea, Dyspareunia, Endometriosis, Hypomenorrhoea, subjects affected / exposed occurrences (all)	11 / 108 (10.19%) 15	Additional description: Menorrhagia, Metrorrhagia, Uterine spasm, Vaginal discharge, Vaginal haemorrhage, Vaginal ulceration	
Respiratory, thoracic and mediastinal disorders Cough, Nasal polyps, Oropharyngeal pain, Pharyngeal disorder, Rhinorrhoea subjects affected / exposed occurrences (all)	9 / 108 (8.33%) 12		
Psychiatric disorders Depression, Schizophrenia subjects affected / exposed occurrences (all)	2 / 108 (1.85%) 2		
Investigations Blood cholesterol increased, Body temperature increased subjects affected / exposed occurrences (all)	2 / 108 (1.85%) 2		
Injury, poisoning and procedural complications			

Fall, Foot fracture, Ligament sprain, Procedural dizziness, Radius fracture, Road traffic accident,		Additional description: Traumatic fracture, Vaccination complication	
subjects affected / exposed	8 / 108 (7.41%)		
occurrences (all)	8		
Cardiac disorders			
Palpitations			
subjects affected / exposed	1 / 108 (0.93%)		
occurrences (all)	2		
Nervous system disorders			
Dizziness, Headache, Hypoaesthesia, Migraine, Neuralgia, Paraesthesia, Sciatica			
subjects affected / exposed	20 / 108 (18.52%)		
occurrences (all)	27		
Blood and lymphatic system disorders			
Anaemia, Lymphadenopathy			
subjects affected / exposed	4 / 108 (3.70%)		
occurrences (all)	4		
Gastrointestinal disorders			
Abdominal Pain Lower, Abdominal pain upper, Aphthous ulcer, Diarrhoea, Dyspepsia, Gingival bleeding		Additional description: Haemorrhoids, Irritable bowel syndrome, Nausea, Proctalgia, Toothache, Vomiting	
subjects affected / exposed	17 / 108 (15.74%)		
occurrences (all)	20		
Hepatobiliary disorders			
Cholelithiasis			
subjects affected / exposed	1 / 108 (0.93%)		
occurrences (all)	2		
Skin and subcutaneous tissue disorders			
Alopecia, Pruritus, Psoriasis, Urticaria			
subjects affected / exposed	4 / 108 (3.70%)		
occurrences (all)	5		
Musculoskeletal and connective tissue disorders			
Arthralgia, back pain, Joint swelling, Musculoskeletal stiffness, Myalgia, Neck pain		Additional description: Plantar fasciitis, Tendonitis	
subjects affected / exposed	12 / 108 (11.11%)		
occurrences (all)	13		
Infections and infestations			

Asymptomatic COVID-19, Bacterial vaginosis, COVID-19, Cystitis, Cytomegalovirus infection subjects affected / exposed occurrences (all) Viral infection subjects affected / exposed occurrences (all)	Additional description: Gastroenteritis viral, Herpes zoster, Influenza, Labyrinthitis, Laryngitis, Lower respiratory tract infection, Nasopharyngitis, Otitis externa, Paronychia, Rhinitis, Sinusitis, Tonsillitis, Upper respiratory tract infection, Urinary tract infection		
	55 / 108 (50.93%)		
	80		
	3 / 108 (2.78%)		
Metabolism and nutrition disorders Insulin resistance subjects affected / exposed occurrences (all)	3		
	1 / 108 (0.93%)		
	1

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 January 2020	<p>Protocol v2.0: Changes were made to:</p> <ul style="list-style-type: none">• Align the documentation of persistent hrHPV infection inclusion criteria with clinical practice in the secondary care setting• Remove reference to focal CIN2 to align with standard of care in all countries in which the study is to be performed. Consequently, Pap smears will no longer be performed.• Update the target concentration of ChAdOx1-HPV to 8 x 10¹⁰ vp/mL as the drug product manufacture yield exceeded expectations. The delivered doses to the participants remain the same by use of a different injected volume.• Update the Investigational Medicinal Product (IMP) storage conditions to 2-8°C, as a result of recently reported stability data• Allow for sites to take only one cytobrush sample. Collection and analysis of a second sample will be performed only by those sites who can ensure delivery of a sample to the analytical laboratory within a 2-hour window from the sample being taken.• Mandate that the Investigator should notify the Sponsor within 24 hours of becoming aware of an SAE and clarify that SAEs should be reported via the SAE page of the eCRF• Ensure that colposcopy data collected is appropriate to the development of the study vaccines• Provide further clarity and correct typographical errors
29 May 2020	<p>In response to Medicines & Healthcare products Regulatory Agency (MHRA), UK assessment:</p> <ul style="list-style-type: none">• Clarification of the data to be reviewed by the SMC to support dose escalation between the groups has been added.• Clarification that review of the safety profile results and adverse events of the sentinel participant 72 hours after dosing in each group in the lead-in phase will be performed by the CRO Medical Monitor and a review memo will be sent to each of the sites participating in the lead-in phase to confirm that the 2nd and 3rd participant may be dosed has been added.• The dose of MVA-HPV administered to participants in Group C of the lead-in phase has been amended to 1 x 10⁸pfu.• The study stopping/pausing rules have been updated to include two Grade 3 unsolicited adverse events occur that are considered related to study vaccine, regardless of type• The definition of post-menopausal status has been updated.• Clarification of the duration of contraception requirements has been added. <p>In response to Federal Agency for Medicines and Health Products (FAMHP), Belgium assessment:</p> <ul style="list-style-type: none">• Clarification of the data to be reviewed by the SMC to support dose escalation between the groups and clarification that the dosing of a sentinel participant in the lead-in phase applies at both Day 0 and Day 28 has been added.• The dose of MVA-HPV administered to participants in Group C of the lead-in phase has been amended to 1 x 10⁸pfu.• Clarification that progestogen-only hormonal contraceptives without inhibition of ovulation are not considered to be highly effective, has been added Clarification that the presence of blood dyscrasias will exclude a potential participant from the study.• The study stopping/pausing rules have been updated to include one Grade 3 adverse event considered related to the study vaccine, regardless of type, during the lead-in phase.

04 August 2020	<p>Changes were made to:</p> <ul style="list-style-type: none"> • Update the study vaccine storage conditions to below -65°C to allow for a longer storage duration at investigator sites. <p>Clarify the temperature record review process upon study vaccine shipment and clarify that additional study vaccine administration guidance is contained in the Pharmacy Manual.</p> <ul style="list-style-type: none"> • Introduce individual participant stopping criteria to improve participant safety. • Introduce SARS-CoV-2 PCR testing at screening and prior to Day 0 and Day 28, if the participant is showing symptoms of COVID-19, or there has been known exposure, to improve participant safety. • Add an exclusion criterion of 'Current infection with severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) as evidenced by PCR laboratory testing' to improve participant safety. • Amend exclusion criterion 2 to align with the prednisone dose included in the list of concomitant medication to be avoided in Section 5.10
25 June 2021	<p>Changes were made to:</p> <ul style="list-style-type: none"> • Update the Sponsor's Authorised Representative to Margaret Marshall MD • Update the summary of clinical experience to reflect use of the ChAdOx1-vectored COVID-19 vaccine and Vaccitech access to study data • Update the study vaccine storage conditions to below -70°C to reflect current stability data. • Remove study-specific SARS-CoV-2 PCR testing to improve site staff and participant safety. Sites will follow their local SARS-CoV-2 public health guidance and procedures. • Amend inclusion criterion 4 to recognize sexual abstinence as an acceptable method of birth control only if the participant refrains from heterosexual intercourse during the entire study period and it is the usual lifestyle of the participant, in order to make it consistent with Heads of Medicines Agencies (HMA), Clinical Trials Facilitation Group (CTFG) guidance. • Amend exclusion criterion 5 to add an example of possible previous severe allergen. • Amend exclusion criterion 7 and Section 5.10 to reflect current known ChAdOx1 vaccine potential interactions. • Allow for study vaccinations to be administered within a window of ± 2 days • Reformat the study pausing/stopping rules to clarify meaning. • Add the solicited adverse event severity rating guidance provided to the participants. • Add a Belgium Co-ordinating Principal Investigator to the Safety Monitoring Committee

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
