Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 August 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	31 August 2022
Global end of trial reached?	Yes
Global end of trial date	31 August 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective is to evaluate the efficacy of monthly subcutaneous (SC) fremanezumab in adult participants with migraine and major depressive disorder (MDD).

Protection of trial subjects:

This study was conducted in full accordance with the International Conference on Harmonisation (ICH) Good Clinical Practice (GCP) Consolidated Guideline (E6) and any applicable national and local laws and regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 August 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czechia: 62
Country: Number of subjects enrolled	Germany: 28
Country: Number of subjects enrolled	Spain: 9
Country: Number of subjects enrolled	France: 10
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Greece: 50
Country: Number of subjects enrolled	Israel: 9
Country: Number of subjects enrolled	Italy: 24
Country: Number of subjects enrolled	Poland: 41
Country: Number of subjects enrolled	Russian Federation: 41
Country: Number of subjects enrolled	Ukraine: 24
Country: Number of subjects enrolled	United States: 53
Worldwide total number of subjects	353
EEA total number of subjects	224

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	342
From 65 to 84 years	11
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Of the 540 participants screened, 353 participants were enrolled/randomized. One participant was randomized to Placebo and received placebo in the double-blind (DB) period but was summarized in the Fremanezumab treatment group in all safety summaries due to an error in recording treatment.

Period 1

Period 1 title	DB Phase (12 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo matched to fremanezumab SC during the 12-week DB period and then continued into the open-label (OL) extension period in which all participants received a single quarterly dose of fremanezumab Dose 2 SC on Day 85.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was administered per schedule specified in the arm description.

Arm title	Fremanezumab
------------------	--------------

Arm description:

Participants received monthly doses of fremanezumab Dose 1 SC during the 12-week DB period and then continued into the OL extension period in which all participants received a single quarterly dose of fremanezumab Dose 2 SC on Day 85.

Arm type	Experimental
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	TEV-48125, LBR-101, PF-04427429, RN307
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Fremanezumab was administered per dose and schedule specified in the arm description.

Number of subjects in period 1	Placebo	Fremanezumab
Started	178	175
DB modified intent-to-treat (mITT) set	178	175
Completed	166	164
Not completed	12	11
Consent withdrawn by subject	6	4
Adverse event, non-fatal	-	3
Protocol deviation	3	3
Other than specified	1	-
Lost to follow-up	1	-
Lack of efficacy	1	1

Period 2

Period 2 title	OL Phase (12 Weeks)
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants received placebo matched to fremanezumab subcutaneously (SC) during the 12-week double blind (DB) period and then continued into the open-label (OL) extension period in which all participants received a single quarterly dose of fremanezumab Dose 2 SC on Day 85.

Arm type	Placebo
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	TEV-48125, LBR-101, PF-04427429, RN307
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Fremanezumab was administered per dose and schedule specified in the arm description.

Arm title	Fremanezumab
------------------	--------------

Arm description:

Participants received monthly doses of fremanezumab Dose 1 SC during the 12-week DB period and then continued into the OL extension period in which all participants received a single quarterly dose of fremanezumab Dose 2 SC on Day 85.

Arm type	Experimental
Investigational medicinal product name	Fremanezumab
Investigational medicinal product code	TEV-48125, LBR-101, PF-04427429, RN307
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Fremanezumab was administered per dose and schedule specified in the arm description.

Number of subjects in period 2	Placebo	Fremanezumab
Started	166	164
OL mITT analysis set	165	161
Completed	154	155
Not completed	12	9
Consent withdrawn by subject	5	5
Protocol deviation	-	1
Pregnancy	1	1
Other than specified	6	2

Baseline characteristics

Reporting groups

Primary: Change from Baseline in Monthly Average Number of Migraine Days During the 12-Week DB Treatment Phase After the First Dose of Study Drug

End point title	Change from Baseline in Monthly Average Number of Migraine Days During the 12-Week DB Treatment Phase After the First Dose of Study Drug
-----------------	--

End point description:

A migraine day was defined as when at least 1 of following occurred: A calendar day (0:00 to 23:59) demonstrating at least 4 consecutive hours of headache meeting criteria for migraine with or without aura; at least 4 consecutive hours of headache meeting criteria for probable migraine (1 migraine criterion missing); a headache of any duration that was treated with migraine-specific medications; and a calendar day that was immediately consecutive of any day fulfilling 3 criteria above, where participants report headache of any duration. Monthly averages were derived and normalized to 28 days equivalent by formula: (number of days of efficacy variable over 12-week/number of days with assessments recorded in e-diary for 12-week)*28. Least square (LS) mean was calculated using analysis of covariance (ANCOVA). DB mITT analysis set: all randomized participants who received at least 1 dose of study drug and had at least 10 days of postrandomization efficacy assessment on primary endpoint.

Secondary: Change from Baseline in Hamilton Depression Rating Scale-17 (HAM-D 17) Items Total Score at Week 8

End point title	Change from Baseline in Hamilton Depression Rating Scale-17 (HAM-D 17) Items Total Score at Week 8
-----------------	--

End point description:

HAM-D 17 is a list of 17 items used to determine participant's level of depression. HAM-D total score comprises a sum of 17 individual item scores. 8 items scored in a range of 0 (none/absent) to 2 (severe symptom) include: Insomnia (early, middle, late), somatic symptoms (gastrointestinal and general), genital symptoms, loss of weight, and insight. The following 9 items are scored in a range of 0 (none/absent) to 4 (severe symptom): Agitation, depressed mood, feelings of guilt, suicide, work and activities, retardation, anxiety (psychic and somatic), and hypochondriasis. HAM-D17 total score is calculated as the sum of 17 individual symptom scores; total score can range from 0 to 52. Higher scores indicate more severe depression. LS mean was calculated using mixed-effects model for repeated measures (MMRM). DB mITT analysis set: all randomized participants who received at least 1 dose of study drug and had at least 10 days of postrandomization efficacy assessment on primary endpoint.

Secondary: Change from Baseline in Migraine-Specific Quality of Life (MSQoL) Questionnaire Role Function-Restrictive and Role Function-Preventive Domain Scores at Week 12

End point title	Change from Baseline in Migraine-Specific Quality of Life (MSQoL) Questionnaire Role Function-Restrictive and Role Function-Preventive Domain Scores at Week 12
End point description:	
MSQoL v2.1 is a 14-item questionnaire. Each item is scored on a 6-point scale: 1=none of the time to 6=all of the time. MSQoL measures the degree to which performance of normal activities is limited by migraine (Role Function-Restrictive domain comprising 7 items; score range 7 to 42), the degree to which performance of normal activities is prevented by migraine (Role Function-Preventive domain comprising 4 items; score range 4 to 24), and emotional effects of migraine (Emotional Function domain comprising 3 items; score range 3 to 18). Total raw scores for each domain is the sum of final item value for all of the items in that domain. Total raw score for each domain are transformed to a 0-100 scale with higher scores indicating a better health-related quality of life. LS mean was calculated using MMRM. DB mITT analysis set: all randomized participants who received at least 1 dose of study drug and had at least 10 days of postrandomization efficacy assessment on primary endpoint.

Secondary: Change From Baseline in 6-Item Headache Impact Test (HIT-6) Disability Score at Week 12

End point title	Change From Baseline in 6-Item Headache Impact Test (HIT-6) Disability Score at Week 12
End point description: Migraine related disability was assessed using the HIT-6. The questionnaire measures the adverse impact of headache on social functioning, role functioning, vitality, cognitive functioning, and psychological distress. It also assesses headache severity. Each question was answered on the scale ranging with the following response options: 6 points (never), 8 points (rarely), 10 points (sometimes), 11 points (very often), and 13 points (always). The total score was obtained from summation of the 6 question points. The HIT-6 total score ranges between 36 and 78, with higher scores reflecting greater impact. DB mITT analysis set included all randomized participants who received at least 1 dose of study drug and had at least 10 days of postrandomization efficacy assessment on the primary endpoint.

Secondary: Number of Participants With Treatment-emergent Adverse Events (TEAEs)

End point title	Number of Participants With Treatment-emergent Adverse Events (TEAEs)
End point description: An adverse event (AE) was defined as any untoward medical occurrence in a participant who received study drug without regard to possibility of causal relationship. Serious AEs (SAEs) were defined as death, a life-threatening AE, inpatient hospitalization or prolongation of existing hospitalization, persistent or significant disability or incapacity, a congenital anomaly or birth defect, or an important medical event that jeopardized participant and required medical intervention to prevent 1 of the outcomes listed in this definition. AEs were considered TEAEs if onset occurred on or after the first dose date. A summary of other non-serious AEs and all serious AEs, regardless of causality is located in Reported AE section. DB safety analysis set included all randomized participants who received at least 1 dose of study drug during the DB treatment period. OL safety analysis set included all participants who received at least 1 of dose of study drug during the OL treatment period.

Adverse events

Adverse events information^[1]

Timeframe for reporting adverse events:

Baseline up to Week 24

Adverse event reporting additional description:

DB safety analysis set and OL safety analysis set (all randomized participants who received at least 1 dose of study drug during the DB period and the OL period).

One participant was randomized to Placebo and received placebo in DB period but was summarized in the Fremanezumab group in all safety summaries due to an error in recording treatment.

Assessment type	Systematic

Reporting groups

Reporting group title	Double-blind Phase: Placebo
-----------------------	-----------------------------

Reporting group description:

Participants received placebo matched to fremanezumab SC during the 12-week DB period.

Reporting group title	Open-label Phase: Placebo/Fremanezumab Dose 2
-----------------------	---

Reporting group description:

Participants received a single quarterly dose of fremanezumab Dose 2 SC on Day 85.

Reporting group title	Open-label Phase: Fremanezumab Dose 1/Fremanezumab Dose 2
-----------------------	---

Reporting group description:

Participants received a single quarterly dose of fremanezumab Dose 2 SC on Day 85.

Reporting group title	Double-blind Phase: Fremanezumab
-----------------------	----------------------------------

Reporting group description:

Participants received monthly doses of fremanezumab Dose 1 SC during the 12-week DB period.

Notes:

[1] - There are no non-serious adverse events recorded for these results. It is expected that there will be at least one non-serious adverse event reported.

Justification: No non-serious AEs were reported in this study.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
04 June 2019	The following major procedural changes (not all-inclusive) were made to the protocol: <ul style="list-style-type: none">• The primary reason for this amendment was to specify that the suicidality assessment to be used was the eC-SSRS in conjunction with the clinical judgment of a qualified psychiatrist.
10 October 2019	The following major procedural changes (not all-inclusive) were made to the protocol: <ul style="list-style-type: none">• The primary reason for this amendment was to update the protocol based on feedback received from the Voluntary Harmonisation Procedure.
04 November 2019	The following major procedural changes (not all-inclusive) were made to the protocol: <ul style="list-style-type: none">• The primary reasons for this amendment were to update the protocol to allow a qualified staff member to complete the HAM-A and HAM-D 17 assessments and to allow a qualified clinician's judgment to be used in conjunction with the eC-SSRS instead of a psychiatrist.
04 May 2020	The following major procedural changes (not all-inclusive) were made to the protocol: <ul style="list-style-type: none">• The primary reason for this amendment was to revise an exclusion criterion to exclude participants with a history of Stevens-Johnson Syndrome or toxic epidermal necrolysis syndrome and to allow rescreening of participants once.• Coronavirus 2019 (COVID-19) pandemic-related operational updates were added to the study as a new appendix.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
