#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 March 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 January 2021
Global end of trial reached?	Yes
Global end of trial date	18 March 2021
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the effect of filgotinib compared to placebo as assessed by the American College of Rheumatology 20% improvement (ACR20) response in participants with active psoriatic arthritis who have an inadequate response or are intolerant to biologic disease-modifying anti-rheumatic drugs (DMARD) therapy.

Protection of trial subjects:

The protocol and consent/assent forms were submitted by each investigator to a duly constituted Independent Ethics Committee (IEC) or Institutional Review Board (IRB) for review and approval before study initiation. All revisions to the consent/assent forms (if applicable) after initial IEC/IRB approval were submitted by the investigator to the IEC/IRB for review and approval before implementation in accordance with regulatory requirements. This study was conducted in accordance with recognized international scientific and ethical standards, including but not limited to the International Conference on Harmonization guideline for Good Clinical Practice (ICH GCP) and the original principles embodied in the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	13 November 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Canada: 3
Country: Number of subjects enrolled	Czechia: 6
Country: Number of subjects enrolled	Hungary: 2
Country: Number of subjects enrolled	Japan: 2
Country: Number of subjects enrolled	Poland: 27
Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	Spain: 17
Country: Number of subjects enrolled	Taiwan: 1
Country: Number of subjects enrolled	United States: 45
Worldwide total number of subjects	106
EEA total number of subjects	52

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	91
From 65 to 84 years	15
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants were enrolled at study sites in the United States, Europe, Canada, Australia, and Asia. The first participant was screened on 13 November 2019. The last study visit occurred on 18 March 2021.

### Pre-assignment

Screening details:

170 participants were screened.

### Period 1

Period 1 title	Main Study (Up to 16 Weeks)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Filgotinib 200 mg (Main Study)

Arm description:

Filgotinib 200 milligrams (mg) tablet orally once daily + placebo to match (PTM) filgotinib 100 mg tablet orally once daily for 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily with or without food.

Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	GS-6034, GLPG0634
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

200 mg tablets administered once daily with or without food.

<b>Arm title</b>	Filgotinib 100 mg (Main Study)
------------------	--------------------------------

Arm description:

Filgotinib 100 mg tablet orally once daily + PTM filgotinib 200 mg tablet orally once daily for 16 weeks.

Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	GS-6034, GLPG0634
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg tablets administered once daily with or without food.

Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: Administered once daily with or without food.	
<b>Arm title</b>	Placebo (Main Study)

Arm description:

PTM filgotinib 200 mg tablet orally once daily + PTM filgotinib 100 mg tablet orally once daily for 16 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily with or without food.

<b>Number of subjects in period 1</b>	Filgotinib 200 mg (Main Study)	Filgotinib 100 mg (Main Study)	Placebo (Main Study)
Started	36	34	36

Study Terminated by Sponsor	14	13	14

## Period 2

Period 2 title	LTE Phase (After 16 weeks to Week 70)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

## Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	Filgotinib 200 mg From Filgotinib 200 mg (LTE)
Arm description: Long term extension (LTE): Filgotinib 200 mg tablet orally once daily + PTM filgotinib 100 mg tablet orally once daily for up to 44.3 weeks. Participants received filgotinib 200 mg in the Main Study.	
Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	GS-6034, GLPG0634
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: 200 mg tablets administered once daily with or without food.	
Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: Administered once daily with or without food.	
<b>Arm title</b>	Filgotinib 100 mg From Filgotinib 100 mg (LTE)
Arm description: Filgotinib 100 mg tablet orally once daily + PTM filgotinib 200 mg tablet orally once daily for up to 43.9 weeks. Participants received filgotinib 100 mg in the Main Study.	
Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	GS-6034, GLPG0634
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: 100 mg tablets administered once daily with or without food.	
Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: Administered once daily with or without food.	
<b>Arm title</b>	Filgotinib 200 mg From Placebo (LTE)
Arm description: Filgotinib 200 mg tablet orally once daily + PTM filgotinib 100 mg tablet orally once daily for up to 44.1 weeks. Participants received placebo in the Main Study.	
Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	GS-6034, GLPG0634
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use
Dosage and administration details: 200 mg tablets administered once daily with or without food.	

Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily with or without food.

<b>Arm title</b>	Filgotinib 100 mg From Placebo (LTE)
------------------	--------------------------------------

Arm description:

Filgotinib 100 mg tablet orally once daily + PTM filgotinib 200 mg tablet orally once daily for up to 44 weeks. Participants received placebo in the Main Study.

Arm type	Experimental
Investigational medicinal product name	Filgotinib
Investigational medicinal product code	
Other name	GS-6034, GLPG0634
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

100 mg tablets administered once daily with or without food.

Investigational medicinal product name	Placebo to match filgotinib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Film-coated tablet
Routes of administration	Oral use

Dosage and administration details:

Administered once daily with or without food.

<b>Number of subjects in period 2</b>	Filgotinib 200 mg From Filgotinib 200 mg (LTE)	Filgotinib 100 mg From Filgotinib 100 mg (LTE)	Filgotinib 200 mg From Placebo (LTE)

## Baseline characteristics

### Reporting groups

Reporting group title	Filgotinib 200 mg (Main Study)
Reporting group description: Filgotinib 200 milligrams (mg) tablet orally once daily + placebo to match (PTM) filgotinib 100 mg tablet orally once daily for 16 weeks.	
Reporting group title	Filgotinib 100 mg (Main Study)
Reporting group description: Filgotinib 100 mg tablet orally once daily + PTM filgotinib 200 mg tablet orally once daily for 16 weeks.	
Reporting group title	Placebo (Main Study)
Reporting group description: PTM filgotinib 200 mg tablet orally once daily + PTM filgotinib 100 mg tablet orally once daily for 16 weeks.	

Reporting group values	Filgotinib 200 mg (Main Study)	Filgotinib 100 mg (Main Study)	Placebo (Main Study)
Number of subjects	36	34	36
Age categorical Units: Subjects			

Age continuous Units: years arithmetic mean standard deviation	56 ± 10.5	54 ± 9.3	54 ± 10.5
Gender categorical Units: Subjects			
Female	12	15	18
Male	24	19	18
Race Units: Subjects			
Asian	1	1	2
Black or African American	0	1	0
White	35	32	34
Ethnicity Units: Subjects			
Hispanic or Latino	1	3	1
Not Hispanic or Latino	35	31	35
Psoriatic Arthritis Disease Activity Score (PASDAS)			
PASDAS is a composite disease activity measure for psoriatic arthritis. The score of PASDAS range from 0 -10, lower score indicates better function.			
Units: score on a scale arithmetic mean standard deviation	5.9 ± 0.97	5.7 ± 1.07	5.6 ± 0.93
Disease Activity in Psoriatic Arthritis (DAPSA)			
DAPSA score is the sum of swollen joint count (66 joints), tender joint count (68 joints), CRP (mg/dL), patient's global assessment of PsA pain intensity (PGAPI) [using visual analogue scale (VAS) on a scale of 0-100, 0 = no pain and 100 = serious pain), and patient's global assessment of disease activity (PGADA) (using VAS on a scale of 0-100, 0 = very well and 10 = very poor). DAPSA scores 0-4 = remission, 5-14 = low disease activity, 15-28 = moderate disease activity, and >28 = high disease			

activity. Lower scores indicate better function.			
Units: score on a scale			
arithmetic mean	45.9	42.8	43.1
standard deviation	± 22.64	± 22.05	± 23.26
Physician's Global Assessment of Psoriasis (PhGAP)			
The PhGAP is used to determine the participant's psoriasis lesions overall at a given time point. The participant's psoriasis disease activity is assessed by a physician according to the grades of induration, erythema and scaling on a scale of 0 to 5. The sum of the three grades will be used to obtain the total average score. PhGAP is based on the total average score on a scale of 0-5, where, 0=cleared, 1=minimal, 2=mild, 3=moderate, 4=marked and 5=severe. Lower scores indicates better function. Participants in the FAS with ≥ 3% BSA at baseline were analyzed (N=16, 17, 16).			
Units: score on a scale			
arithmetic mean	2.7	2.8	2.9
standard deviation	± 0.79	± 0.95	± 0.81
Modified Nail Psoriasis Severity Index (mNAPSI)			
mNAPSI is used to assess each nail abnormality for each of the participant's nails. Each finger has a score between 0 and 13. The total mNAPSI score is the sum of all abnormalities of individual score across all fingers, and the total mNAPSI score ranges from 0 to 130. Lower numbers indicate fewer nail abnormalities. Participants in the FAS with Psoriatic Nail Involvement at Baseline were analyzed (N=25, 25, 30).			
Units: score on a scale			
arithmetic mean	11	15	10
standard deviation	± 9.7	± 21.4	± 7.1
Leeds Enthesitis Index (LEI)			
Enthesitis is assessed using LEI. The enthesitis examination by LEI evaluated the presence or absence of pain by applying local pressure on 6 anatomical sites: medial femoral condyle (left and right), lateral epicondyle (left and right) and the achilles tendon insertion (left and right). Enthesitis at each site was scored as 0 = enthesitis absent and 1 = enthesitis present. The total score ranges from 0 to 6, higher scores indicates greater degree of enthesitis. Participants in the FAS with enthesitis at baseline were analyzed (N=22, 22, 24).			
Units: score on a scale			
arithmetic mean	2	2	1
standard deviation	± 1.7	± 1.6	± 1.2
12-Item Psoriatic Arthritis Impact of Disease (PsAID-12)			
The PsAID questionnaire assesses the impact of PsA on people's lives. The PsAID is calculated based on 12 numerical rating scales (NRS) questions. Each NRS is assessed as a number between 0 and 10. The total sum is divided by 20. Thus the range of the final PsAID value is 0-10 where higher figures indicate worse impact of disease.			
Units: score on a scale			
arithmetic mean	5.2	5.1	4.8
standard deviation	± 1.94	± 2.33	± 2.10
Tender Joint Count Based on 68 Joints (TJC68)			
TJC68 is an assessment of 68 joints. Each joint was evaluated as 'normal', 'tender', 'tender and swollen' or 'not able to evaluate'. It is derived as the sum of all tender joints. The overall tender joint count ranged from 0 to 68, with a higher score indicating a greater degree of tenderness.			
Units: tender joint count			
arithmetic mean	23	21	22
standard deviation	± 17.2	± 14.6	± 15.3
Swollen Joint Count Based on 66 Joints (SJC66)			
SJC66 is an assessment of 66 joints. Each joint was evaluated as 'normal', 'swollen', 'tender and swollen' or 'not able to evaluate'. It is derived as the sum of all swollen joints. The overall swollen joint count ranged from 0 to 66, with a higher score indicating a greater degree of swelling.			
Units: swollen joint count			
arithmetic mean	11	10	10

standard deviation	± 6.7	± 8.7	± 8.9
Patient's Global Assessment of Disease Activity (PGADA)			
PGADA was assessed by the participants using a VAS on a scale of 0 (very well) to 100 (very poor).			
Units: score on a scale			
arithmetic mean	56	55	53
standard deviation	± 22.4	± 24.7	± 21.1
Physician's Global Assessment of Disease Activity (PhGADA)			
PhGADA was assessed by the physician using a VAS on a scale of 0 (no disease activity) to 100 (maximum disease activity).			
Units: score on a scale			
arithmetic mean	63	63	59
standard deviation	± 13.8	± 14.0	± 14.5
Health Assessment Questionnaire Disability Index (HAQ-DI)'s Pain Assessment			
Participants assessed their pain severity using a VAS on a scale of 0 (no pain) to 100 (severe pain).			
Units: score on a scale			
arithmetic mean	61	56	57
standard deviation	± 19.3	± 23.3	± 23.4
High-Sensitivity CReactive Protein (hsCRP)			
Units: milligrams per liter (mg/L)			
arithmetic mean	8.03	7.58	8.20
standard deviation	± 18.347	± 10.361	± 12.707
Disease Activity Score 28 (DAS28) C-Reactive Protein (CRP)			
Units: score on a scale			
arithmetic mean	4.8	4.8	4.8
standard deviation	± 0.98	± 0.97	± 1.00
Psoriasis Area and Severity Index (PASI)			
PASI is a system used for assessing and grading the severity of psoriatic lesions and their response to therapy. The PASI produces a numeric score that can range from 0 (no disease) to 72 (maximal disease). A higher score indicates more severe disease. Participants in the FAS with psoriasis covering ≥3% of the BSA at baseline were analyzed (N=16, 17, 16).			
Units: score on a scale			
arithmetic mean	8.5	9.6	9.1
standard deviation	± 6.54	± 6.43	± 6.25
Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index			
The enthesitis examination was based on the 16 anatomical sites. SPARCC enthesitis index has an overall total score ranging from 0 to 16. Higher score indicates a greater number of sites that are affected by enthesitis. Participants in FAS with Enthesitis at Baseline were analyzed (N=22, 22, 24).			
Units: score on a scale			
arithmetic mean	4	6	4
standard deviation	± 3.8	± 4.4	± 2.8
Leeds Dactylitis Index (LDI)			
LDI measures dactylitis using circumference of involved digits, control digits and tenderness of involved digits. LDI measures ratio of circumference of affected digit to circumference of digit on contralateral hand/foot using Leeds Dactylometer. LDI score is calculated based on circumference of dactylitic finger/toe (mm), circumference of contralateral digit (mm), tenderness score. Tenderness of affected digits is assessed on a scale from 0 [no tenderness] to 3 [tender and withdrawn]. Higher LDI=worse dactylitis. Participants in FAS with Dactylitis at Baseline were analyzed (N=15, 6, 9).			
Units: score on a scale			
arithmetic mean	54.8	21.9	22.1

standard deviation	± 83.24	± 26.26	± 12.91
Tender Dactylitis Count (TDC)			
Tender score (0 = no tenderness, 1 = tender, 2 = tender and wince, 3 = tender and withdraw) is collected for Dactylitis Assessments on the Dactylitis Score Sheet that was used for calculation of LDI total score. Tender dactylitis count (TDC) equals the number of tender fingers and toes (tender score >0). For participants with dactylitis status absent for all the fingers and toes, the TDC will be set as 0. The total score range of TDC is from 0 to 60, higher scores indicate greater presence of dactylitis. Participants in the FAS with dactylitis at baseline were analyzed (N=15, 6, 9).			
Units: tender dactylitis count			
arithmetic mean	3	1	1
standard deviation	± 4.9	± 0.6	± 0.9
Health Assessment Questionnaire-Disability Index (HAQ-DI)			
The HAQ-DI score is defined as the average of the scores of eight functional categories (dressing and grooming, arising, eating, walking, hygiene, reach, grip, and other activities), usually completed by the participant. The eight category scores are averaged into an overall HAQ-DI score on a scale from 0 (no disability) to 3 (completely disabled). When 6 or more categories are non-missing, total possible score is 3. If more than 2 categories are missing, the HAQ-DI score is set to missing.			
Units: score on a scale			
arithmetic mean	1.24	1.03	1.13
standard deviation	± 0.637	± 0.612	± 0.557
Functional Assessment of Chronic Illness Therapy (FACIT)- Fatigue			
FACIT-Fatigue scale is a brief, 13-item, symptom-specific questionnaire that specifically assesses the self-reported severity of fatigue and its impact upon daily activities and functioning in the past 7 days. The FACIT-Fatigue uses 0 (not at all) to 4 (very much) numeric rating scales for a total possible score of 0 to 52. Higher scores indicate less fatigue.			
Units: score on a scale			
arithmetic mean	25.9	30.9	31.0
standard deviation	± 12.98	± 10.08	± 10.66
36-item Short- Form Version 2 (SF-36v2): Mental Component Summary (MCS)			
The SF-36 is a health-related survey that assesses participant's quality of life and consists of 36 questions covering 8 health domains: physical functioning, bodily pain, role limitations due to physical problems and emotional problems, general health, mental health, social functioning, vitality, and 2 component scores (MCS and PCS). Each domain was scored by summing the individual items and transforming the scores into a 0 to 100 scale with higher scores indicating better health status or functioning.			
Units: score on a scale			
arithmetic mean	45.8	48.1	49.8
standard deviation	± 11.97	± 8.79	± 12.20
SF-36v2: Physical Component Summary (PCS)			
The SF-36 is a health-related survey that assesses participant's quality of life and consists of 36 questions covering 8 health domains: physical functioning, bodily pain, role limitations due to physical problems and emotional problems, general health, mental health, social functioning, vitality, and 2 component scores (MCS and PCS). Each domain was scored by summing the individual items and transforming the scores into a 0 to 100 scale with higher scores indicating better health status or functioning.			
Units: score on a scale			
arithmetic mean	33.7	35.5	35.7
standard deviation	± 8.13	± 9.41	± 9.05

Psoriatic Arthritis Disease Activity Score (PASDAS)			
PASDAS is a composite disease activity measure for psoriatic arthritis. The score of PASDAS range from 0 -10, lower score indicates better function.			
Units: score on a scale arithmetic mean standard deviation			
	-		
Disease Activity in Psoriatic Arthritis (DAPSA)			
DAPSA score is the sum of swollen joint count (66 joints), tender joint count (68 joints), CRP (mg/dL), patient's global assessment of PsA pain intensity (PGAPI) [using visual analogue scale (VAS) on a scale of 0-100, 0 = no pain and 100 = serious pain), and patient's global assessment of disease activity (PGADA) (using VAS on a scale of 0-100, 0 = very well and 10 = very poor). DAPSA scores 0-4 = remission, 5-14 = low disease activity, 15-28 = moderate disease activity, and >28 = high disease activity. Lower scores indicate better function.			
Units: score on a scale arithmetic mean standard deviation			
	-		
Physician's Global Assessment of Psoriasis (PhGAP)			
The PhGAP is used to determine the participant's psoriasis lesions overall at a given time point. The participant's psoriasis disease activity is assessed by a physician according to the grades of induration, erythema and scaling on a scale of 0 to 5. The sum of the three grades will be used to obtain the total average score. PhGAP is based on the total average score on a scale of 0-5, where, 0=cleared, 1=minimal, 2=mild, 3=moderate, 4=marked and 5=severe. Lower scores indicates better function. Participants in the FAS with $\geq 3\%$ BSA at baseline were analyzed (N=16, 17, 16).			
Units: score on a scale arithmetic mean standard deviation			
	-		
Modified Nail Psoriasis Severity Index (mNAPSI)			
mNAPSI is used to assess each nail abnormality for each of the participant's nails. Each finger has a score between 0 and 13. The total mNAPSI score is the sum of all abnormalities of individual score across all fingers, and the total mNAPSI score ranges from 0 to 130. Lower numbers indicate fewer nail abnormalities. Participants in the FAS with Psoriatic Nail Involvement at Baseline were analyzed (N=25, 25, 30).			
Units: score on a scale arithmetic mean standard deviation			
	-		
Leeds Enthesitis Index (LEI)			

<p>Enthesitis is assessed using LEI. The enthesitis examination by LEI evaluated the presence or absence of pain by applying local pressure on 6 anatomical sites: medial femoral condyle (left and right), lateral epicondyle (left and right) and the achilles tendon insertion (left and right). Enthesitis at each site was scored as 0 = enthesitis absent and 1 = enthesitis present. The total score ranges from 0 to 6, higher scores indicates greater degree of enthesitis. Participants in the FAS with enthesitis at baseline were analyzed (N=22, 22, 24).</p>			
Units: score on a scale arithmetic mean standard deviation			
12-Item Psoriatic Arthritis Impact of Disease (PsAID-12)			
<p>The PsAID questionnaire assesses the impact of PsA on people's lives. The PsAID is calculated based on 12 numerical rating scales (NRS) questions. Each NRS is assessed as a number between 0 and 10. The total sum is divided by 20. Thus the range of the final PsAID value is 0-10 where higher figures indicate worse impact of disease.</p>			
Units: score on a scale arithmetic mean standard deviation			
Tender Joint Count Based on 68 Joints (TJC68)			
<p>TJC68 is an assessment of 68 joints. Each joint was evaluated as 'normal', 'tender', 'tender and swollen' or 'not able to evaluate'. It is derived as the sum of all tender joints. The overall tender joint count ranged from 0 to 68, with a higher score indicating a greater degree of tenderness.</p>			
Units: tender joint count arithmetic mean standard deviation			
Swollen Joint Count Based on 66 Joints (SJC66)			
<p>SJC66 is an assessment of 66 joints. Each joint was evaluated as 'normal', 'swollen', 'tender and swollen' or 'not able to evaluate'. It is derived as the sum of all swollen joints. The overall swollen joint count ranged from 0 to 66, with a higher score indicating a greater degree of swelling.</p>			
Units: swollen joint count arithmetic mean standard deviation			
Patient's Global Assessment of Disease Activity (PGADA)			
<p>PGADA was assessed by the participants using a VAS on a scale of 0 (very well) to 100 (very poor).</p>			
Units: score on a scale arithmetic mean standard deviation			
Physician's Global Assessment of Disease Activity (PhGADA)			
<p>PhGADA was assessed by the physician using a VAS on a scale of 0 (no disease activity) to 100 (maximum disease activity).</p>			
Units: score on a scale arithmetic mean standard deviation			
Health Assessment Questionnaire Disability Index (HAQ-DI)'s Pain Assessment			
<p>Participants assessed their pain severity using a VAS on a scale of 0 (no pain) to 100 (severe pain).</p>			
Units: score on a scale arithmetic mean standard deviation			
High-Sensitivity CReactive Protein (hsCRP)			
Units: milligrams per liter (mg/L) arithmetic mean			

standard deviation	-		
Disease Activity Score 28 (DAS28) C-Reactive Protein (CRP) Units: score on a scale arithmetic mean standard deviation	-		
Psoriasis Area and Severity Index (PASI)			
PASI is a system used for assessing and grading the severity of psoriatic lesions and their response to therapy. The PASI produces a numeric score that can range from 0 (no disease) to 72 (maximal disease). A higher score indicates more severe disease. Participants in the FAS with psoriasis covering >=3% of the BSA at baseline were analyzed (N=16, 17, 16).			
Units: score on a scale arithmetic mean standard deviation	-		
Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index			
The enthesitis examination was based on the 16 anatomical sites. SPARCC enthesitis index has an overall total score ranging from 0 to 16. Higher score indicates a greater number of sites that are affected by enthesitis. Participants in FAS with Enthesitis at Baseline were analyzed (N=22, 22, 24).			
Units: score on a scale arithmetic mean standard deviation	-		
Leeds Dactylitis Index (LDI)			
LDI measures dactylitis using circumference of involved digits, control digits and tenderness of involved digits. LDI measures ratio of circumference of affected digit to circumference of digit on contralateral hand/foot using Leeds Dactylometer. LDI score is calculated based on circumference of dactylitic finger/toe (mm), circumference of contralateral digit (mm), tenderness score. Tenderness of affected digits is assessed on a scale from 0 [no tenderness] to 3 [tender and withdrawn]. Higher LDI=worse dactylitis. Participants in FAS with Dactylitis at Baseline were analyzed (N=15, 6, 9).			
Units: score on a scale arithmetic mean standard deviation	-		
Tender Dactylitis Count (TDC)			
Tender score (0 = no tenderness, 1 = tender, 2 = tender and wince, 3 = tender and withdraw) is collected for Dactylitis Assessments on the Dactylitis Score Sheet that was used for calculation of LDI total score. Tender dactylitis count (TDC) equals the number of tender fingers and toes (tender score >0). For participants with dactylitis status absent for all the fingers and toes, the TDC will be set as 0. The total score range of TDC is from 0 to 60, higher scores indicate greater presence of dactylitis. Participants in the FAS with dactylitis at baseline were analyzed (N=15, 6, 9).			
Units: tender dactylitis count arithmetic mean standard deviation	-		
Health Assessment Questionnaire-Disability Index (HAQ-DI)			
The HAQ-DI score is defined as the average of the scores of eight functional categories (dressing and grooming, arising, eating, walking, hygiene, reach, grip, and other activities), usually completed by the participant. The eight category scores are averaged into an overall HAQ-DI score on a scale from 0 (no disability) to 3 (completely disabled). When 6 or more categories are non-missing, total possible score is 3. If more than 2 categories are missing, the HAQ-DI score is set to missing.			
Units: score on a scale arithmetic mean standard deviation	-		
Functional Assessment of Chronic Illness Therapy (FACIT)- Fatigue			
FACIT-Fatigue scale is a brief, 13-item, symptom-specific questionnaire that specifically assesses the self-reported severity of fatigue and its impact upon daily activities and functioning in the past 7 days. The FACIT-Fatigue uses 0 (not at all) to 4 (very much) numeric rating scales for a total possible score of 0 to 52. Higher scores indicate less fatigue.			
Units: score on a scale			

arithmetic mean standard deviation	-		
36-item Short- Form Version 2 (SF-36v2): Mental Component Summary (MCS)			
The SF-36 is a health-related survey that assesses participant's quality of life and consists of 36 questions covering 8 health domains: physical functioning, bodily pain, role limitations due to physical problems and emotional problems, general health, mental health, social functioning, vitality, and 2 component scores (MCS and PCS). Each domain was scored by summing the individual items and transforming the scores into a 0 to 100 scale with higher scores indicating better health status or functioning.			
Units: score on a scale arithmetic mean standard deviation	-		
SF-36v2: Physical Component Summary (PCS)			
The SF-36 is a health-related survey that assesses participant's quality of life and consists of 36 questions covering 8 health domains: physical functioning, bodily pain, role limitations due to physical problems and emotional problems, general health, mental health, social functioning, vitality, and 2 component scores (MCS and PCS). Each domain was scored by summing the individual items and transforming the scores into a 0 to 100 scale with higher scores indicating better health status or functioning.			
Units: score on a scale arithmetic mean standard deviation	-

**Secondary: Percentage of Participants who Achieved VLDA Response at Weeks 20, 24, 28, 36, and 48**

End point title	Percentage of Participants who Achieved VLDA Response at Weeks 20, 24, 28, 36, and 48
-----------------	---

End point description:

VLDA is a measure to indicate disease remission, and is based on a composite score of 7 domains. A participant is considered as having achieved the VLDA if the participant fulfills all the seven criteria: TJC68  $\leq 1$ ; SJC66  $\leq 1$ ; PASI score  $\leq 1$  for participants with psoriasis covering BSA  $< 3\%$  [PASI evaluates the severity and extent of psoriasis. In PASI, body is divided into four parts, head and neck, upper limb, trunk and lower limbs. Each area is assessed for erythema, induration and scaling, each rated on a scale of 0 to 4. The total score ranges from 0 (no disease) to 72 (maximal disease)]; PGAPI  $\leq 15$  [using VAS on a scale of 0 (no pain) to (serious pain)]; PGADA  $\leq 20$  [using VAS on a scale of 0 (very well) to 100 (very poor)]; HAQ-DI score  $\leq 0.5$ ; LEI score  $\leq 1$  with participants with enthesitis at baseline. Participants in the FAS with available data were analyzed.

### Secondary: Change From Baseline in Modified Nail Psoriasis Severity Index (mNAPSI) at Weeks 4, 8, 12, and 16 in Participants With Psoriatic Nail Involvement at Baseline

End point title	Change From Baseline in Modified Nail Psoriasis Severity Index (mNAPSI) at Weeks 4, 8, 12, and 16 in Participants With Psoriatic Nail Involvement at Baseline
-----------------	---

End point description:

mNAPSI is used to assess each nail abnormality for each of the participant's nails. Three features or groups of features (pitting, onycholysis together with oil-drop dyschromia, and crumbling) of each fingernail are graded on a scale from 0 (no onycholysis together with oil-drop dyschromia, no pitting, no crumbling) to 3 (>30 onycholysis together with oil-drop dyschromia, >50 pitting, >50% crumbling). Four features (leukonychia, splinter, hemorrhages, hyperkeratosis, and red spots in the lunula) are graded with the score of 1 = present or 0 = absent for each fingernail. Each finger has a score between 0 and 13. The total mNAPSI score is the sum of all abnormalities individual score across all fingers, and the total mNAPSI score ranges from 0 to 130. Lower numbers indicate fewer nail abnormalities. A negative change from baseline indicates improvement. Participants in the FAS with psoriatic nail involvement at baseline and with available data were analysed.

### Secondary: Change From Baseline in Leeds Enthesitis Index (LEI) at Weeks 4, 8, 12, and 16 in Participants With Enthesitis at Baseline

End point title	Change From Baseline in Leeds Enthesitis Index (LEI) at Weeks 4, 8, 12, and 16 in Participants With Enthesitis at Baseline
-----------------	--

End point description:

Enthesitis is assessed using LEI. The enthesitis examination by LEI evaluates the presence or absence of pain by applying local pressure on 6 anatomical sites: medial femoral condyle (left and right), lateral epicondyle (left and right), and the achilles tendon insertion (left and right). Enthesitis at each site is scored as 0 (enthesitis absent) and 1 (enthesitis present). LEI is derived as the sum of the enthesitis score over the 6 sites mentioned above. The total score ranges from 0 to 6, higher scores indicates greater degree of enthesitis. A negative change from baseline indicates improvement. Participants in the FAS with enthesitis at baseline and with available data were analyzed.

### Secondary: Change From Baseline in LEI at Weeks 20, 24, 28, 36, and 48 in Participants With Enthesitis at Baseline

End point title	Change From Baseline in LEI at Weeks 20, 24, 28, 36, and 48 in Participants With Enthesitis at Baseline
-----------------	---

End point description:

Enthesitis is assessed using LEI. The enthesitis examination by LEI evaluates the presence or absence of pain by applying local pressure on 6 anatomical sites: medial femoral condyle (left and right), lateral epicondyle (left and right), and the achilles tendon insertion (left and right). Enthesitis at each site is scored as 0 (enthesitis absent) and 1 (enthesitis present). LEI is derived as the sum of the enthesitis score over the 6 sites mentioned above. The total score ranges from 0 to 6, higher scores indicates greater degree of enthesitis. A negative change from baseline indicates improvement. Participants in the FAS with enthesitis at baseline and with available data were analyzed.

### Secondary: Change From Baseline in 12-Item Psoriatic Arthritis Impact of Disease (PsAID-12) Score at Weeks 4 and 16

End point title	Change From Baseline in 12-Item Psoriatic Arthritis Impact of Disease (PsAID-12) Score at Weeks 4 and 16
-----------------	--

End point description:

The PsAID questionnaire assesses the impact of PsA on people's lives. The PsAID is calculated based on 12 numerical rating scales (NRS) questions. The 12 NRS is focused on pain, fatigue, skin, work and/or leisure activities, function, discomfort, sleep, coping, anxiety, embarrassment, social life, and depression. Each NRS is assessed as a number between 0 and 10. The total sum is divided by 20. Thus the range of the final PsAID value is 0-10 where higher figures indicate worse impact of disease. A negative change from baseline indicates improvement. Participants in the FAS with available data were analyzed.

End point description:

ACR70 response is achieved when the participant has:  $\geq 70\%$  improvement (reduction) from baseline in TJC68, SJC66 and in at least 3 of the following 5 items: PGADA using a VAS on a scale of 0 (very well) to 100 (very poor); PHGADA using a VAS on a scale of 0 (no disease activity) to 100 (maximum disease activity); HAQ-DI inclusive of activities scored on a scale of 0 (no disability) to 3 (completely disabled); HAQ-DI pain assessment using VAS on a scale of 0 (no pain) to 100 (serious pain); and hsCRP. Participants with missing outcomes were set as non-responders. Participants in the FAS with the available data were analyzed.

### Secondary: Change From Baseline in Individual ACR Component: Tender Joint Count Based on 68 Joints (TJC68) at Weeks 2, 4, 8, 12, and 16

End point title	Change From Baseline in Individual ACR Component: Tender Joint Count Based on 68 Joints (TJC68) at Weeks 2, 4, 8, 12, and 16
-----------------	--

End point description:

TJC68 is an assessment of 68 joints. Each joint was evaluated as 'normal', 'tender', 'tender and swollen' or 'not able to evaluate'. It was derived as the sum of all tender joints. The overall tender joint count ranged from 0 to 68, with a higher score indicating a greater degree of tenderness. A negative change from baseline indicates improvement. Participants in the FAS with available data were analyzed.

### Secondary: Change From Baseline in Individual ACR Component: hsCRP at Weeks 18, 20, 24, 28, 36, 48, and 60

End point title	Change From Baseline in Individual ACR Component: hsCRP at Weeks 18, 20, 24, 28, 36, 48, and 60
-----------------	---

End point description:

The hsCRP is the ACR core set measure of acute phase reactant. It was measured at the central laboratory to help assess the effect of filgotinib on the participant's psoriatic arthritis. A negative change from baseline indicates improvement. Participants in the FAS with available data were analyzed. 9999=SD cannot be calculated for 1 participant.

Higher values indicate higher disease activity. DAS28(CRP) remission is defined as DAS28(CRP) < 2.6. Missing outcomes were set as non-responders. Participants in FAS with the available data were analyzed.

### Secondary: Time to Achieve DAS28(CRP) LDA

End point title	Time to Achieve DAS28(CRP) LDA
-----------------	--------------------------------

End point description:

The DAS28(CRP) is a measure of the participant's disease activity calculated using the TJC (28 joints), SJC (28 joints), PGADA (VAS; 0=very well to 100=very poor), and hsCRP for a total possible score of 1 to 9.4. Higher values indicate higher disease activity. DAS28(CRP) LDA is defined as DAS28(CRP)  $\leq$  3.2. Time to achieve DAS28(CRP) LDA is the number of days from the first dose date of study drug administration to the first time when a participant achieves DAS28(CRP) LDA. Participants in the FAS with available data were analyzed. 9999=Median and Upper Inter-Quartile Range was not estimable due to the low number of participants with DAS28(CRP) LDA.

### Secondary: Time to Achieve DAPSA LDA

End point title	Time to Achieve DAPSA LDA
-----------------	---------------------------

End point description:

DAPSA is calculated by summing following components: TJC68; SJC66; PGADA [using VAS on a scale of 0 (very well) to 100 very poor)]; PGAPI [using a VAS on a scale of 0 (no pain) to 100 (serious pain)] and CRP. DAPSA scores 0-4=remission, 5-14=low disease activity, 15-28=moderate disease activity, and >28=high disease activity. DAPSA LDA is defined as DAPSA ≤ 14. Time to achieve DAPSA LDA is number of days from first dose date of study drug administration to first time when a participant achieves DAPSA LDA. If DAPSA LDA is not achieved during main study phase, time to achieve DAPSA LDA was censored at last non-missing DAS28(CRP) assessment date during main study phase. If component scores of DAPSA LDA are at different dates for a visit, the latest date was used for derivation of time to achieve DAPSA LDA. Participants in the FAS with available data were analyzed. 9999=Median

and Upper Inter-Quartile Range was not estimable due to the low number of participants with DAPSA LDA.

### Secondary: Change From Baseline in Psoriasis Area and Severity Index (PASI) at Weeks 4, 8, 12, and 16 in Participants With Psoriasis Covering $\geq$ 3% of the BSA at Baseline

End point title	Change From Baseline in Psoriasis Area and Severity Index (PASI) at Weeks 4, 8, 12, and 16 in Participants With Psoriasis Covering $\geq$ 3% of the BSA at Baseline
-----------------	---

End point description:

PASI is assessed in participants with psoriasis covering  $\geq$  3% of the BSA at Baseline. PASI is a system used for assessing and grading the severity of psoriatic lesions and their response to therapy. In the PASI system, the body is divided into 4 regions: the head and neck, trunk, upper limbs, and lower limbs. Each of these areas are assessed separately for the percentage of the area involved and for erythema, induration, and scaling, which are each rated on a scale of 0 to 4, where 0 = none, 1 = mild, 2 = moderate, 3 = severe and 4 = very severe, which translates to a numeric score that ranges from 0 (indicates no involvement) to 6 (90 percent [%] to 100% involvement). The PASI produces a numeric score that can range from 0 (no disease) to 72 (maximal disease). A higher score indicates more severe disease. A negative change from baseline indicates improvement. Participants in the FAS with psoriasis covering  $\geq$  3% of the BSA at baseline and with available data were analyzed.

### **Secondary: Percentage of Participants who Achieved PASI75 Response at Weeks 20, 24, 28, 36, and 48 in Participants With Psoriasis Covering $\geq$ 3% of the BSA at Baseline**

End point title	Percentage of Participants who Achieved PASI75 Response at Weeks 20, 24, 28, 36, and 48 in Participants With Psoriasis Covering $\geq$ 3% of the BSA at Baseline
-----------------	--

End point description:

PASI is assessed in participants with psoriasis covering  $\geq$  3% of the BSA at Baseline. PASI is a system used for assessing and grading the severity of psoriatic lesions and their response to therapy. In the PASI system, the body is divided into 4 regions: the head and neck, trunk, upper limbs, and lower limbs. Each of these areas are assessed separately for the percentage of the area involved and for erythema, induration, and scaling, which are each rated on a scale of 0 to 4, which translates to a numeric score that ranges from 0 (indicates no involvement) to 6 (90% to 100% involvement). The PASI produces a numeric score that can range from 0 (no disease) to 72 (maximal disease). For PASI75, the improvement threshold from baseline in PASI score is 75%. A higher score indicates more severe

disease. Participants in the FAS with psoriasis covering  $\geq 3\%$  of the BSA at baseline and with available data were analyzed.

## Secondary: Change From Baseline in Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index at Weeks 4, 8, 12, and 16 in Participants With Enthesitis at Baseline

End point title	Change From Baseline in Spondyloarthritis Research Consortium of Canada (SPARCC) Enthesitis Index at Weeks 4, 8, 12, and 16 in Participants With Enthesitis at Baseline
-----------------	---

End point description:

The enthesitis examination is based on the 16 anatomical sites: the medial epicondyle (left and right), the lateral epicondyle (left and right), the supraspinatus insertion (left and right), the bilateral greater trochanter (left and right), the quadriceps tendon insertion into superior border of patella (left and right), the patellar ligament insertion into inferior pole of patella or tibial tuberosity (left and right), the achilles tendon insertion (left and right), and the plantar fascia insertion (left and right). Enthesitis at each site is scored as either 0 (enthesitis absent) and 1 (enthesitis present). SPARCC enthesitis index has an overall total score ranging from 0 to 16. Higher score indicates a greater number of sites that are affected by enthesitis. A negative change from baseline indicates improvement. Participants in the FAS with enthesitis at baseline and with available data were analyzed.

### Secondary: Change From Baseline in Leeds Dactylitis Index (LDI) at Weeks 4, 8, 12, and 16 in Participants With Dactylitis at Baseline

End point title	Change From Baseline in Leeds Dactylitis Index (LDI) at Weeks 4, 8, 12, and 16 in Participants With Dactylitis at Baseline
-----------------	--

End point description:

LDI measures dactylitis using circumference of involved digits and control digits and tenderness of involved digits. Digits affected by dactylitis are defined as those with an at least 10% difference in ratio of circumference of affected digit to contralateral digit. Control digit is either contralateral digit (digit on opposite hand/foot), or if contralateral digit is also affected, values from standard reference table. LDI score is calculated based on circumference of dactylitic finger/toe (mm), circumference of contralateral digit (mm), tenderness score (0=no tenderness, 1=tender). Tenderness of affected digits is assessed on a scale from 0 (no tenderness) to 3 (tender and withdrawn). Higher LDI=worse dactylitis. Negative change from baseline indicates improvement. Participants in FAS with dactylitis at baseline and with available data were analyzed.

### Secondary: Change From Baseline in Health Assessment Questionnaire - Disability Index (HAQ-DI) Score at Weeks 2, 4, 8, 12, and 16

End point title	Change From Baseline in Health Assessment Questionnaire - Disability Index (HAQ-DI) Score at Weeks 2, 4, 8, 12, and 16
-----------------	--

End point description:

The HAQ-DI score is defined as the average of the scores of eight functional categories (dressing and grooming, arising, eating, walking, hygiene, reach, grip, and other activities), usually completed by the participant. Responses in each functional category are collected as 0 (without any difficulty) to 3 (unable to do a task in that area), with or without aids or devices. The eight category scores are averaged into an overall HAQ-DI score on a scale from 0 (no disability) to 3 (completely disabled). When 6 or more categories are non-missing, total possible score is 3. If more than 2 categories are missing, the HAQ-DI score is set to missing. Negative change from baseline indicates improvement (less disability). Participants in the FAS with available data were analyzed.

### Secondary: Change From Baseline in Functional Assessment of Chronic Illness Therapy - Fatigue Scale (FACIT-Fatigue) Score at Weeks 4 and 16

End point title	Change From Baseline in Functional Assessment of Chronic Illness Therapy - Fatigue Scale (FACIT-Fatigue) Score at Weeks 4 and 16
-----------------	--

End point description:

FACIT-Fatigue scale is a brief, 13-item, symptom-specific questionnaire that specifically assesses the self-reported severity of fatigue and its impact upon daily activities and functioning in the past 7 days. The FACIT-Fatigue uses 0 (not at all) to 4 (very much) numeric rating scales for a total possible score of 0 to 52. Higher scores indicate less fatigue. Positive change in value indicates improvement (no or less severity of fatigue). Participants in the FAS with available data were analyzed.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 August 2019	<ul style="list-style-type: none"><li>• Re-categorized secondary and exploratory endpoints</li><li>• Clarified stratification at randomization</li><li>• Added optional human leukocyte antigen B27 (HLA-B27) sample collection</li><li>• Common terminology criteria for adverse events (CTCAE) version 4.03 was updated to version 5.0</li><li>• Added follicle stimulating hormone (FSH) testing post screening</li><li>• Updated sample questionnaires for clinical and patient reported outcomes and corrected inconsistencies with nomenclature.</li></ul>
17 April 2020	<ul style="list-style-type: none"><li>• Removed restriction on use of Week 16 data</li><li>• Corrected and clarified inclusion and exclusion criteria with respect to cyclosporine removal, region-specific age requirements, and total bilirubin at Screening</li><li>• Removed CRP collection at Screening and updated CRP at Day 1 to be unblinded to the Sponsor</li><li>• Updated key secondary, other secondary, and exploratory endpoints</li><li>• Updated statistical methods to add description for graphical approach test procedures, safety estimands, and ACR20 response rate assumptions</li><li>• Updated preclinical pharmacology and toxicology section to align with current Investigator Brochure</li><li>• Added participant discontinuation requirement for thromboembolic events and for participants with active disease at Week 24</li><li>• Included biomarker collection visits in study procedures table footnotes and peripheral blood mononuclear cells (PBMC) collection clarification for North America only</li><li>• Updated concomitant medications to include a note for medications that can cause dermatitis and exacerbate psoriasis</li><li>• Revised psoriatic arthritis (PsA) rescue therapy language</li><li>• Updated AE terminology, special situations reporting, SAE and death reporting</li><li>• Added toxicity management for thromboembolic events</li><li>• Added more detailed process language for data monitoring committee (DMC)</li><li>• Updated major adverse cardiovascular events and thromboembolic events language to include/add more detailed description of adjudication process</li><li>• Clarified when early termination and safety follow-up visits will occur</li><li>• Clarified when clinical reported outcome collection was planned.</li></ul>

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
19 March 2020	There was a temporary halt to recruitment following the declaration of the COVID-19 pandemic by WHO.	18 June 2020

Notes:

### Limitations and caveats

None reported
