

**Change From Baseline in Haemophilia A Quality of Life Questionnaire (Haem-A-QOL) Physical Health Score at Week 52 in Arm A: Prophylaxis**

|   |   |
|---|---|
| Statistical analysis title              | Arm A: Prophylaxis  |
| Statistical analysis description        | Testing according to hierarchical testing procedure (only performed if previous endpoint [Annualised Bleeding Rate During the Efficacy Period in Prophylaxis Arm - Superiority Analysis] was statistically significant for considered dosing regimen). Least square (LS) mean difference, standard error and 95% confidence interval were estimated by mixed-effect model with repeated measures (MMRM) using visit as fixed effect and Baseline Haem-A-QOL physical health score as covariate. |
| Comparison groups                       | Arm A: Prophylaxis  |
| Number of subjects included in analysis | 104   |
| Analysis specification                  | Pre-specified   |
| Analysis type                           | Other   |
| Analysis type comment                   | An unstructured covariance matrix within a subject was used.  |
| P-value                                 | 0.0001  |
| Parameter type                          | LS mean difference  |
| Point estimate                          | -6.74   |
| Confidence interval                     | Mixed-effect model with repeated measures   |
| level                                   | 95%   |
| sides                                   | 2-sided   |
| Lower limit                             | -10.13  |
| Upper limit                             | -3.36   |
| Variability estimate                    | Standard error of the mean  |
| Dispersion value                        | 1.71  |
