

**Change From Baseline in Haemophilia-specific Health-related Quality of Life Questionnaire for Adults (Haem-A-QOL) Physical Health Domain Score at Week 52 in Arm A: Prophylaxis**

Statistical analysis title	Arm A: Prophylaxis
Statistical analysis description	Testing according to hierarchical testing procedure (only performed if previous endpoint [Annualised Bleeding Rate During the Efficacy Period in Prophylaxis Arm - Superiority Analysis] was statistically significant for considered dosing regimen). Least square (LS) mean difference, standard error and 95% confidence interval were estimated by mixed-effect model with repeated measures (MMRM) using visit as fixed effect and Baseline Haem-A-QOL physical health score as covariate.
Comparison groups	Arm A: Prophylaxis - Baseline data versus Week 52 data
Number of subjects included in analysis	98
Analysis specification	Pre-specified
Analysis type	Superiority
Analysis type comment	
P-value	0.0001
Method	Unstructured covariance matrix
P-value comment	An unstructured covariance matrix within a subject was used.
Parameter type	LS mean difference
Point estimate	-6.74
Confidence interval	
level	95%
sides	2-sided
Lower limit	-10.13
Upper limit	-3.36
Variability estimate	Standard error of the mean
Dispersion value	1.71
