Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	27 April 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	27 April 2021
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate if the addition of feladilimab to pembrolizumab as first-line treatment improves the efficacy of pembrolizumab in participants with recurrent or metastatic (R/M) head and neck squamous cell carcinoma/cancer (HNSCC).

Protection of trial subjects:

Not applicable

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 November 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Argentina: 1
Country: Number of subjects enrolled	Australia: 20
Country: Number of subjects enrolled	Brazil: 10
Country: Number of subjects enrolled	Canada: 31
Country: Number of subjects enrolled	China: 16
Country: Number of subjects enrolled	Denmark: 1
Country: Number of subjects enrolled	France: 21
Country: Number of subjects enrolled	Germany: 7
Country: Number of subjects enrolled	Greece: 2
Country: Number of subjects enrolled	Israel: 1
Country: Number of subjects enrolled	Italy: 12
Country: Number of subjects enrolled	Japan: 20
Country: Number of subjects enrolled	Korea, Republic of: 18
Country: Number of subjects enrolled	Mexico: 2
Country: Number of subjects enrolled	Netherlands: 7
Country: Number of subjects enrolled	Norway: 6
Country: Number of subjects enrolled	Poland: 26
Country: Number of subjects enrolled	Portugal: 5
Country: Number of subjects enrolled	Romania: 29
Country: Number of subjects enrolled	Russian Federation: 18
Country: Number of subjects enrolled	Spain: 13
Country: Number of subjects enrolled	Switzerland: 3
Country: Number of subjects enrolled	Taiwan: 6

Country: Number of subjects enrolled	United Kingdom: 15
Country: Number of subjects enrolled	United States: 25
Worldwide total number of subjects	315
EEA total number of subjects	129

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	174
From 65 to 84 years	138
85 years and over	3

Subject disposition

Recruitment

Recruitment details:

As of cut off date a total of 315 participants with HNSCC were enrolled in this study. Of which, 2 were dosed only with pembrolizumab after the date of Dear Investigator Letter (DIL). Hence, 313 participants were included in the modified Intent to Treat (mITT) population and 315 participants were included in the safety and enrolled populations.

Pre-assignment

Screening details:

Recruitment in the study was stopped following review by of interim safety and efficacy data after a pre-specified futility analysis. Participants discontinued feladilimab/placebo, but treatment with pembrolizumab will continue until disease progression, death or unacceptable toxicity and safety data will be updated following study end.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Participants receiving feladilimab and pembrolizumab

Arm description:

Participants were administered feladilimab (GSK3359609-humanized anti-ICOS immunoglobulin G4 [IgG4] monoclonal antibody [mAb]) and pembrolizumab (humanized anti-PD-1 IgG4 mAb) as an intravenous (IV) infusion once every three weeks(Q3W).

Arm type	Experimental
Investigational medicinal product name	Feladilimab+ Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants were administered feladilimab in combination with pembrolizumab as an intravenous infusion over approximately 30 minutes every Q3W.

Arm title	Participants receiving placebo and pembrolizumab

Arm description:

Participants were administered placebo and pembrolizumab (humanized anti-PD-1 IgG4 mAb) as an IV infusion Q3W.

Arm type	Placebo
Investigational medicinal product name	Placebo+ Pembrolizumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion
Routes of administration	Intravenous use

Dosage and administration details:

Participants were administered placebo in combination with pembrolizumabas an intravenous infusion over approximately 30 minutes every Q3W.

Number of subjects in period 1	Participants receiving feladilimab and pembrolizumab	Participants receiving placebo and pembrolizumab
Started	158	157
mITT population	157	156
Completed	51	38
Not completed	107	119
On Study Treatment (Pembrolizumab)	52	62
Consent withdrawn by subject	8	5
Lost to follow-up	-	1
In Follow-up	47	51

End points

End points reporting groups

Reporting group title	Participants receiving feladilimab and pembrolizumab

Reporting group description:

Participants were administered feladilimab (GSK3359609-humanized anti-ICOS immunoglobulin G4 [IgG4] monoclonal antibody [mAb]) and pembrolizumab (humanized anti-PD-1 IgG4 mAb) as an intravenous (IV) infusion once every three weeks(Q3W).

Reporting group title	Participants receiving placebo and pembrolizumab

Reporting group description:

Participants were administered placebo and pembrolizumab (humanized anti-PD-1 IgG4 mAb) as an IV infusion Q3W.

Subject analysis set title	Feladilimab + pembrolizumab safety analysis set
Subject analysis set type	Safety analysis

Subject analysis set description:

All randomized participants who took at least 1 dose of study intervention. Participants were assigned to the actual study intervention group of feladilimab + pembrolizumab if the participant received any dose of feladilimab. Participants were analyzed according to the actual study intervention received.

Subject analysis set title	Placebo + pembrolizumab safety analysis set
Subject analysis set type	Safety analysis

Subject analysis set description:

All randomized participants who took at least 1 dose of study intervention. Participants were assigned to the actual study intervention group of feladilimab + pembrolizumab if the participant received any dose of feladilimab. Participants were analyzed according to the actual study intervention received.

Subject analysis set title	Feladilimab +pembrolizumab mITT analysis set
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

All randomized participants whether or not randomized intervention was administered, excluding those who were first dosed or randomized after the date of DIL requesting immediate discontinuation of feladilimab /placebo. This analysis set was based on the study intervention to which the participant was randomized.

Subject analysis set title	Placebo + pembrolizumab mITT analysis set
Subject analysis set type	Modified intention-to-treat

Subject analysis set description:

All randomized participants whether or not randomized intervention was administered, excluding those who were first dosed or randomized after the date of DIL requesting immediate discontinuation of feladilimab /placebo. This analysis set was based on the study intervention to which the participant was randomized.

Primary: Overall survival (OS) in the PD-L1 expression positive (Combined positive score [CPS] ≥1) population

End point title	Overall survival (OS) in the PD-L1 expression positive (Combined positive score [CPS] ≥1) population

End point description:

OS was defined as the time from the date of randomization to the date of death due to any cause. CPS was defined as the ratio of the combined number of PD-L1 expressing tumor cells and immune cells (lymphocytes and macrophages) to the total number of viable tumor cells. Data for participants in the mITT population with CPS ≥1 are presented here. Kaplan-Meier estimate for the median OS is presented, along with associated 95% confidence interval, estimated using the Brookmeyer-Crowley method. 99999 = The median was not reached at the time of primary completion date and the upper limit of the 95% CI was not calculable from the available data at the time of data cut off.

End point type	Primary

Secondary: ORR per RECIST v1.1 in the PD-L1 CPS ≥1 population

End point title	ORR per RECIST v1.1 in the PD-L1 CPS ≥1 population

End point description:

ORR per RECIST v1.1 was defined as the proportion of the participants who have a complete response (CR) or partial response (PR) as the best overall response per RECIST v1.1 based upon investigator assessment. As a randomized double-blind study in which primary endpoints are OS and PFS, the confirmation of CR and PR was not required. Rate and associated 2-sided 95 percent Exact (Clopper-Pearson) Confidence Intervals are provided for each treatment arm which are unadjusted. CPS was defined as the ratio of the combined number of PD-L1 expressing tumor cells and immune cells (lymphocytes and macrophages) to the total number of viable tumor cells. Data for participants in the mITT population with CPS ≥1 are presented here.

End point title	ORR per RECIST v1.1 in the PD-L1 CPS ≥20 population

End point description:

ORR per RECIST v1.1 was defined as the proportion of the participants who have a CR or PR as the best overall response per RECIST v1.1 based upon investigator assessment. As a randomized double-blind study in which primary endpoints are OS and PFS, the confirmation of CR and PR was not required. Rate and associated 2-sided 95 percent Exact (Clopper-Pearson) Confidence Intervals are provided for each treatment arm which are unadjusted. CPS was defined as the ratio of the combined number of PD-L1 expressing tumor cells and immune cells (lymphocytes and macrophages) to the total number of viable tumor cells. Data for participants who had a PD-L1 CPS of ≥20 are presented here.

End point title	DCR per RECIST v1.1 in the PD-L1 CPS ≥1 population

End point description:

DCR per RECIST v1.1 based upon investigator assessment, was defined as the percentage of participants with a best overall response of CR or PR at any time plus stable disease (SD) meeting the

minimum time of 15 weeks. A status of SD≥15 weeks will be assigned if the follow-up disease assessment has met the SD criteria at least once after the date of randomization at a minimum of 14 weeks (98 days) considering a one-week visit window. Rate and associated 2-sided 95 percent Exact (Clopper-Pearson) Confidence Intervals are provided for each treatment arm which are unadjusted. CPS was defined as the ratio of the combined number of PD-L1 expressing tumor cells and immune cells (lymphocytes and macrophages) to the total number of viable tumor cells. Data for participants in the mITT population with CPS ≥1 are presented here.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
24 October 2019	Amendment 1: Generated to provide additional clarification that PD-L1 immunohistochemistry (IHC) 22C3 pharmDx assay used by the central laboratories in determining PD-L1 CPS status for study eligibility was the US FDA approved and European Union (EU) CE marked PD-L1 IHC 22C3 pharmDx assay.
19 May 2020	Amendment 2: Generated to include eligibility criteria to restrict the population to have recurrence >6 months from completion of chemoradiation therapy, to address complications of rapid disease progression such as increased risk of tumor associated bleeding that was inherent to the underlying disease of HNSCC and additional clarification regarding unstable medical condition. Additional updates included accounting for the possibility of a non-proportional hazard effect and tail effect in the statistical plan; definition of second course of study treatment that was expanded to include participants who complete 35 cycles of study treatment.
29 June 2021	Amendment 3: Generated to update the Schedule of Activities (SoA), due to the study status in which there is no further accrual and feladilimab is no longer being administered

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Data are reported following the interim analysis decision to stop further accrual into the study and discontinue feladilimab/placebo. The study primary completion analysis results should be interpreted with consideration of the immature data

Notes:
