Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-000468-PIP01-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 December 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	18 December 2023
Global end of trial reached?	Yes
Global end of trial date	18 December 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study will evaluate the safety, efficacy, and pharmacokinetics of posaconazole (POS) intravenous (IV) and oral formulations in pediatric participants 2 to <18 years of age with invasive aspergillosis (IA).

Protection of trial subjects:

This study was conducted in conformance with Good Clinical Practice standards and applicable country and/or local statutes and regulations regarding ethical committee review, informed consent, and the protection of human subjects participating in biomedical research.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	02 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Hungary: 2
Country: Number of subjects enrolled	Israel: 3
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Korea, Republic of: 8
Country: Number of subjects enrolled	Mexico: 4
Country: Number of subjects enrolled	Peru: 2
Country: Number of subjects enrolled	Russian Federation: 3
Country: Number of subjects enrolled	United States: 2
Country: Number of subjects enrolled	Belgium: 6
Worldwide total number of subjects	31
EEA total number of subjects	9

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	14
Adolescents (12-17 years)	17
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Male or female participants with a diagnosis of possible, probable, or proven invasive aspergillosis (IA) aged 2 to <18 years were enrolled in this study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Age Cohort 1 (2 -< 12 years old)

Arm description:

On Day 1 participants receive 2 administrations of posaconazole (POS) 6 mg/kg body weight by intravenous (IV) infusion. On Days 2 through 7, participants receive POS 6 mg/kg body weight once daily by IV infusion. Beginning at Day 8 up to Day 84, participants may transition to receiving an oral formulation, or they may remain on the IV formulation.

Arm type	Experimental
Investigational medicinal product name	Posaconazole intravenous (IV)
Investigational medicinal product code	
Other name	MK-5592 SCH 056592 Noxafil®
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Posaconazole (POS) 6 mg/kg body weight by IV infusion.

Investigational medicinal product name	Posaconazole tablet
Investigational medicinal product code	
Other name	MK-5592 SCH 056592 Noxafil®
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

POS tablet 300 mg taken orally. Administered to participants >40 kg.

Investigational medicinal product name	Posaconazole gastro-resistant powder and solvent for oral suspension formulation (PFS)
Investigational medicinal product code	
Other name	MK-5592 SCH 056592 Noxafil®
Pharmaceutical forms	Oral suspension
Routes of administration	Oral use

Dosage and administration details:

Dosing based on weight-band. Administered to participants ≤40 kg.

Arm title	Age Cohort 2 (12 -< 18 years old)
------------------	-----------------------------------

Arm description:

On Day 1 participants receive 2 administrations of posaconazole (POS) 6 mg/kg body weight by intravenous (IV) infusion. On Days 2 through 7, participants receive POS 6 mg/kg body weight once daily by IV infusion. Beginning at Day 8 up to Day 84, participants may transition to receiving an oral formulation, or they may remain on the IV formulation.

Primary: Percentage of participants who experience one or more treatment-related adverse events (AEs)

End point title	Percentage of participants who experience one or more treatment-related adverse events (AEs) ^[1]
End point description:	
An AE is any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of a study intervention. Treatment-related AEs were determined by the investigator to be related to the drug. The 95% confidence interval (CI) was based on the exact binomial method by Clopper- Pearson. The population analyzed consisted of all enrolled participants who received at least 1 dose of study treatment, regardless of their IA classification.	
End point type	Primary
End point timeframe:	
Up to 14 days after treatment (up to Day 102)	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Statistical comparisons between treatment groups were neither planned nor performed for this primary endpoint.

Secondary: Percentage of participants who have a favorable global clinical response through week 6

End point title	Percentage of participants who have a favorable global clinical response through week 6
-----------------	---

End point description:

A global clinical response is assessed by the investigator as favorable if the participant is alive and has a complete response (CR) or partial response (PR). CR is defined as survival within the prespecified period of observation, resolution of all attributable symptoms and signs of disease, resolution of radiological lesion(s), and documented clearance of infected sites that are accessible to repeated sampling. PR is defined as survival within the prespecified period of observation, improvement in attributable symptoms and signs of disease, improvement of radiological lesion(s), and evidence of clearance of infected sites that are accessible to repeated sampling. The population analyzed was participants who have possible, probable, or proven IA; receive at least 1 dose of study treatment; have at least 1 post-allocation observation subsequent to at least 1 dose of study treatment; and have baseline data for those analyses that require baseline data.

End point type	Secondary

End point description:

Steady-state Cmin was determined by population PK analysis from plasma concentration obtained pre-dose up to Week 12 for each of the POS formulations: IV, PFS and tablet. Some participants may have received more than 1 formulation, and results were only reported when N > 2. The population analyzed was all treated participants who had at least 1 postdose plasma concentration obtained after receiving at least 5 days of treatment. Per protocol PK results were analyzed for each POS formulation.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality (ACM): from enrollment up to Day 114, and included those reported beyond the final Day 114 study visit. Adverse events (AEs); from treatment up to 14 days after treatment (up to Day 102).

Adverse event reporting additional description:

ACM population analyzed was all enrolled participants. AE population analyzed was all enrolled participants who received at least 1 dose of study treatment, regardless of their IA classification.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
11 June 2020	Amendment 01: To remove the device-related adverse event reporting language and the Future Biomedical Research (FBR) substudy from the protocol
21 January 2021	Amendment 02: To provide details for IV dosing requirements; to clarify procedures (ie, ECG and diagnostic imaging) in the Schedule of Activities; to clarify maximum blood volume and method for calculating creatinine clearance; to remove pregnancy exclusion to avoid potential confusion with the pregnancy criteria in the list of inclusions; and to update informed consent text to align with current informed consent/assent procedures.
10 November 2022	Amendment 04: To revise exclusion criteria to include the specific K values used in the modified Schwartz formula for males of different ages.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
