General information about the trial

Main objective of the trial:

To evaluate the efficacy of a neoadjuvant immunochemotherapy regimen consisting of atezolizumab, trastuzumab, pertuzumab and epirubicin in regards to pathologic complete response (pCR = ypT0/is, ypN0) which is assessed in the overall study population at the time of surgery

Protection of trial subjects:

The investigators ensured that patients were given comprehensive oral and written information about the nature, significance, and scope of the study prior to enrolment. The study specific patient information and informed consent form included language to encourage study participants to reach out to the Study Doctor / Study Team in case they had any questions, concerns or doubts. Section 16 specifically referenced a 24/7 contact person to reach out to, the ICF furthermore contained a reference to the local ombudsman / patient advocacy / data privacy officer and the trial sites had the opportunity to hand out Patient Cards to the recruited patients for use in case of emergency which includes the trial site's contact details, information of the study drug(s) and the EudraCT-number. A dedicated DMC was established to ensure patient safety throughout the trial.

Background therapy:

Background therapy of trastuzumab, pertuzumab and epirubicin only in treatment part 2 (in treatment arm A and arm B)

Evidence for comparator:

No

Actual start date of recruitment	03 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Subject disposition

Recruitment

Recruitment details:

Recruitment phase for this study was 1.4 years. No follow up was done for this study.

Pre-assignment

Screening details:

A careful check of inclusion and exclusion criteria had to be performed by the Investigators / Site Teams and a centralized web based screening and randomization system was subsequently used which assigned treatment arms electronically, i.e. randomized the participants into the previously described treatment arms.

Period 1

Period 1 title	Overall trial (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Atezolizumab+Pertuzumab+Trastuzumab+Epirubicin (Arm A)

Arm description:

For treatment part 1, arm A patients received 2 3-week cycles of pertuzumab (starting with 840 mg iv on cycle 1, followed by 420 mg iv for the subsequent cycle), 2 3-week cycles of trastuzumab (starting with 600 mg sc or 8 mg/kg iv on cycle 1, followed by 600 mg sc or 6 mg/kg iv for the subsequent cycle) and 2 3-week cycles of atezolizumab (1200 mg iv per cycle).

For treatment part 2, arm A patients received 4 3-week cycles of atezolizumab (1200 mg iv per cycle), 4 3-week cycles pertuzumab (420 mg iv per cycle), 4 3-week cycles trastuzumab (600 mg sc or 6 mg/kg iv per cycle) as well as 4 3-week cycles of epirubicin (90 mg/m² per cycle).

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: The treatment arms were not compared against each other but the proportion (%) of patients with a pathologic complete response (pCR) in both arms combined was compared to a predefined proportion of 40%. It was not possible to document this single-arm comparison with a fixed value in the analysis part of the system. The estimated rate with the 95% confidence interval was therefore included in the description.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

(S)AE reporting was mandatory from the date of informed consent form signature (i.e., screening phase) until 42 days after the last dose of neoadjuvant study treatment.

Adverse event reporting additional description:

Screening Phase: only AEs deemed to be serious (SAEs) and related to protocol mandated and not routinely performed procedures have to be reported.
