Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	21 October 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 October 2022
Global end of trial reached?	No

Notes:

General information about the trial

Main objective of the trial:

IMbrave050 is an ongoing study designed to evaluate the efficacy and safety of adjuvant therapy with atezolizumab plus bevacizumab compared with active surveillance in participants with completely resected or ablated hepatocellular carcinoma (HCC) who are at high risk for disease recurrence.

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	31 December 2019
Long term follow-up planned	Yes
Long term follow-up rationale	Efficacy
Long term follow-up duration	79 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 2
Country: Number of subjects enrolled	Austria: 8
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	Brazil: 8
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	China: 294
Country: Number of subjects enrolled	Costa Rica: 1
Country: Number of subjects enrolled	Czechia: 4
Country: Number of subjects enrolled	Germany: 6
Country: Number of subjects enrolled	Spain: 4
Country: Number of subjects enrolled	France: 37
Country: Number of subjects enrolled	Hong Kong: 7

Country: Number of subjects enrolled	Thailand: 15
Country: Number of subjects enrolled	Turkey: 1
Country: Number of subjects enrolled	Taiwan: 28
Country: Number of subjects enrolled	United States: 19
Worldwide total number of subjects	668
EEA total number of subjects	72

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	427
From 65 to 84 years	239
85 years and over	2

Subject disposition

Recruitment

Recruitment details:

This study was conducted at 134 centers in 26 countries/regions.

Pre-assignment

Screening details:

Participants included completely resected or ablated hepatocellular carcinoma (HCC) who are at high risk for disease recurrence.

Participants randomized to Active Surveillance arm were offered the option to crossover to receive treatment with Atezolizumab.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Arm B (active surveillance)
------------------	-----------------------------

Arm description:

Active surveillance of participants.

Arm type	Active surveillance
----------	---------------------

No investigational medicinal product assigned in this arm

Arm title	Arm A (atezolizumab plus bevacizumab)
------------------	---------------------------------------

Arm description:

Participants received Atezolizumab + Bevacizumab until disease recurrence or unacceptable toxicity.

Arm type	Experimental
----------	--------------

Investigational medicinal product name	Bevacizumab
----------------------------------------	-------------

Investigational medicinal product code	
----------------------------------------	--

Other name	Avastin
------------	---------

Pharmaceutical forms	Infusion
----------------------	----------

Routes of administration	Intravenous use
--------------------------	-----------------

Dosage and administration details:

Bevacizumab will be administered by IV infusion at a dose of 15 mg/kg on Day 1 of each 21-day cycle.

Investigational medicinal product name	Atezolizumab
----------------------------------------	--------------

Investigational medicinal product code	
----------------------------------------	--

Other name	Tecentriq
------------	-----------

Pharmaceutical forms	Infusion
----------------------	----------

Routes of administration	Intravenous use
--------------------------	-----------------

Dosage and administration details:

Atezolizumab 1200 mg will be administered by IV infusion on Day 1 of each 21-day cycle.

Number of subjects in period 1	Arm B (active surveillance)	Arm A (atezolizumab plus bevacizumab)
Started	334	334
Completed	0	0
Not completed	334	334
Physician Decision	-	1
Ongoing in study	302	291
Death	20	27
Withdrawal by Subject	11	14
Lost to follow-up	1	1

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the first study drug administration to the data cutoff date: 21 October 2022 (up to approximately 33 months).

Adverse event reporting additional description:

Adverse events reported based on safety population, which included participants who received any amount of any component of study treatment.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
17 December 2019	Protocol was amended to include combining three of the previous stratification factors and restructured to combine high-risk features, curative procedures, and adjuvant TACE into one stratification factor with 5 strata. IRF and investigator-assessed RFS rate at 24 and 36 months after randomization was added as a secondary endpoint. An exclusion criterion was added to clarify that participants who have more than one treatment with TACE were excluded from the study. The list of atezolizumab risks was updated to include myositis. SIA was replaced by HLH and MAS in the list of potential risks for atezolizumab and the management guidelines for SIA were replaced with management guidelines for HLH and MAS.
03 December 2020	Protocol was amended to include treatment language to allow participants to receive up to 17 cycles of treatment even if this extended beyond 12 months. Exclusion criteria was amended with co-infection with HBV and hepatitis D virus was not allowed. Language in exclusion criteria was updated regarding use of anticoagulants to address the risk of upper gastrointestinal bleeding in patients with HCC. Lists of identified risks for atezolizumab was revised to include severe cutaneous adverse reactions. All identified risks related to bevacizumab was added.
30 November 2021	Protocol was amended to include language to indicate that bevacizumab should be held in the event that atezolizumab was held for an Adverse Event during both the treatment period and the crossover period. Details of the OS analyses including the estimated number of events expected at the interim and final analyses and the efficacy boundaries that will be used have been added for completeness.
25 October 2022	Protocol has been amended to include pericardial disorders in the list of identified risks for atezolizumab.
23 March 2023	Protocol has been amended to include revision to the list of identified risks for atezolizumab to include myelitis and facial paresis. Hemophagocytic lymphohistiocytosis has been updated from a potential risk to an identified risk associated with atezolizumab and language has been revised accordingly.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
