

## Clinical trial results:

### A Pivotal Phase 1/2, Single-Arm, Open-label Study to Evaluate the Safety and Efficacy of Ponatinib With Chemotherapy in Pediatric Patients With Philadelphia Chromosome-Positive (Ph+) Acute Lymphoblastic Leukemia (ALL) Who Have Relapsed or Are Resistant or Intolerant to a Prior Tyrosine Kinase Inhibitor-Containing Therapy, or Who Have the T315I Mutation

#### Summary

EudraCT number	2019-002549-39
Trial protocol	GB FR CZ NL IT PL PT ES
Global end of trial date	19 July 2024

#### Results information

Result version number	v1 (current)
This version publication date	04 January 2025
First version publication date	04 January 2025

#### Trial information

##### Trial identification

Sponsor protocol code	Ponatinib-1501
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04501614
WHO universal trial number (UTN)	U1111-1225-0394

Notes:

##### Sponsors

Sponsor organisation name	Takeda
Sponsor organisation address	95 Hayden Avenue, Lexington, Massachusetts, United States, 02421
Public contact	Study Director, Takeda, TrialDisclosures@takeda.com
Scientific contact	Study Director, Takeda, TrialDisclosures@takeda.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001186-PIP01-11
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	19 July 2024
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	19 July 2024
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this study was to determine the recommended phase 2 dose (RP2D) and rate of complete remission (CR) at the end of the reinduction block of ponatinib (tablet and age-appropriate formulation [AAF]) in combination with chemotherapy.

Protection of trial subjects:

Each participant or their guardians were required to sign an informed consent form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 February 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	China: 5
Country: Number of subjects enrolled	Korea, Republic of: 1
Country: Number of subjects enrolled	Italy: 2
Country: Number of subjects enrolled	Spain: 1
Country: Number of subjects enrolled	United States: 1
Country: Number of subjects enrolled	Brazil: 1
Worldwide total number of subjects	11
EEA total number of subjects	3

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	4
Adolescents (12-17 years)	6

Adults (18-64 years)	1
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Participants with a diagnosis of Philadelphia Chromosome-Positive (Ph+) Acute Lymphoblastic Leukemia (ALL) took part in the study at various investigative sites globally from 24 February 2021 to 19 July 2024.

### Pre-assignment

Screening details:

Participants were enrolled in Phase 1 & received ponatinib per protocol. Due to multiple dose-limiting toxicities (DLTs) in Phase 1, enrollment was terminated & no recommended phase 2 dose (RP2D) was determined. Sponsor terminated study after 6-month follow-up & no participants were enrolled in Phase 2 of study. Thus, no Phase 2 results are presented.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Ponatinib 30 mg Adult Equivalent

Arm description:

Participants received weight-based dose of ponatinib tablets 30 milligrams (mg) adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) up to Day 70 (end of consolidation) followed by optional ponatinib continuation in Phase 1.

Arm type	Experimental
Investigational medicinal product name	Ponatinib
Investigational medicinal product code	
Other name	Ponatinib AAF, Chemotherapy Agents
Pharmaceutical forms	Capsule, Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received weight-based doses of ponatinib tablets equivalent to 30 mg in adults, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment followed by rest period from chemotherapy for a minimum of 6 days consisting of daily ponatinib only) up to Week 8 in Phase 1.

<b>Arm title</b>	Ponatinib 15 mg Adult Equivalent
------------------	----------------------------------

Arm description:

Participants received weight-based dose of ponatinib tablets 15 mg adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) up to Day 70 (end of consolidation) followed by optional ponatinib continuation in Phase 1.

Arm type	Experimental
Investigational medicinal product name	Ponatinib
Investigational medicinal product code	
Other name	Ponatinib AAF, Chemotherapy agents
Pharmaceutical forms	Capsule, Tablet
Routes of administration	Oral use

---

**Dosage and administration details:**

Participants received weight-based doses of ponatinib tablets equivalent to 15 mg in adults, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment followed by rest period from chemotherapy for a minimum of 6 days consisting of daily ponatinib only) up to Week 8 in Phase 1.

<b>Number of subjects in period 1</b>	<b>Ponatinib 30 mg Adult Equivalent</b>	<b>Ponatinib 15 mg Adult Equivalent</b>
Started	7	4
Completed	0	0
Not completed	7	4
Withdrawal by Participant (Parent/Legal Guardian)	1	1
Study Terminated by Sponsor	6	3

## End points

### End points reporting groups

Reporting group title	Ponatinib 30 mg Adult Equivalent
Reporting group description: Participants received weight-based dose of ponatinib tablets 30 milligrams (mg) adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) up to Day 70 (end of consolidation) followed by optional ponatinib continuation in Phase 1.	
Reporting group title	Ponatinib 15 mg Adult Equivalent
Reporting group description: Participants received weight-based dose of ponatinib tablets 15 mg adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) up to Day 70 (end of consolidation) followed by optional ponatinib continuation in Phase 1.	
Subject analysis set title	Ponatinib RP2D
Subject analysis set type	Per protocol
Subject analysis set description: Participants were planned to receive weight-based dose of ponatinib tablets at the RP2D adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) followed by optional ponatinib continuation with or without chemotherapy in Phase 2.	

### Primary: Phase 2: Percentage of Participants with Complete Remission (CR) at the End of the Reinduction Block

End point title	Phase 2: Percentage of Participants with Complete Remission (CR) at the End of the Reinduction Block <sup>[1]</sup>
End point description: CR was defined as no circulating blasts and less than (<)5 percent (%) blasts in the bone marrow (BM); normal maturation of all cellular components in the bone marrow; no extramedullary disease; absolute neutrophil count (ANC) greater than (>)1000 cells/microliter (µL) (or >1.0 × 10 <sup>9</sup> cells/liter [L]); Platelets >100,000/µL (or >100 × 10 <sup>9</sup> platelets/L). The study enrollment was terminated per protocol due to DLTs observed in both dose cohorts in Phase 1 and the RP2D could not be determined leading to study termination by the Sponsor before Phase 2 could be initiated. No data was collected as no participants were enrolled in Phase 2.	
End point type	Primary
End point timeframe: Up to Day 35 in Phase 2	

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: No data was collected as no participants were enrolled in Phase 2.

End point values	Ponatinib RP2D			
Subject group type	Subject analysis set			
Number of subjects analysed	0 <sup>[2]</sup>			
Units: percentage of participants				
number (not applicable)				

Notes:

[2] - No data was collected as no participants were enrolled in Phase 2 due to study termination.

## Statistical analyses

No statistical analyses for this end point

### Primary: Phase 1: Recommended Phase 2 Dose (RP2D) of Ponatinib in Combination With Chemotherapy

End point title	Phase 1: Recommended Phase 2 Dose (RP2D) of Ponatinib in Combination With Chemotherapy <sup>[3]</sup>
-----------------	---

End point description:

The RP2D is the maximum tolerated dose (MTD) or less. '99999' indicates that due to DLTs observed in both dose cohorts, study enrollment was terminated per protocol and participants were discontinued from study treatment per independent data monitoring committee (IDMC) advice followed by study termination by Sponsor. Thus, the RP2D could not be determined. The Safety Population included all participants who received at least 1 dose of ponatinib.

End point type	Primary
----------------	---------

End point timeframe:

Up to Day 35 in Phase 1

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Due to DLTs observed in both dose cohorts, study enrollment was terminated per protocol and participants were discontinued from study treatment per independent data monitoring committee (IDMC) advice followed by study termination by Sponsor. Thus, the RP2D could not be determined.

## Secondary: Phase 2: Number of Participants With TEAEs, Serious TEAEs, VTEs, and AESIs

End point title	Phase 2: Number of Participants With TEAEs, Serious TEAEs, VTEs, and AESIs
End point description: AE:untoward medical occurrence in study participant,temporally associated with use of intervention,whether/not occurrence was considered related to intervention including any unfavorable&unintended sign(eg,clinically significant abnormal laboratory finding),symptom/disease.TEAE:AE that occurs after administration of first dose of any study drug & through 30 days after last dose of any study drug.Serious TEAE:AE that at any dose resulted in death,was life-threatening,required inpatient hospitalisation/prolongation of existing hospitalisation,resulted in persistent/significant incapacity,was congenital anomaly/birth defect,was medically important event.AESI:Protocol-defined AEs resulting in compromise of organ function/other significant consequences.VTEs were identified as AESIs for ponatinib & included arterial,VTEs that meet criteria for serious TEAEs.Study enrollment was terminated per protocol due to DLTs in Phase 1. No data	
End point type	Secondary
End point timeframe: Up to 30 days after last dose of ponatinib in Phase 2	

End point values	Ponatinib RP2D			
Subject group type	Subject analysis set			
Number of subjects analysed	0 <sup>[12]</sup>			
Units: participants				

Notes:

[12] - No data was collected as no participants were enrolled in Phase 2 due to study termination.

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

Up to 34.8 months in Phase 1

Adverse event reporting additional description:

The Safety Population included all participants who received at least 1 dose of ponatinib. The study was terminated following the Sponsor's decision attributed to DLTs observed in Phase 1. Hence, no participants were enrolled in Phase 2 of the study and no data for the same could be presented.

Assessment type	Systematic

### Reporting groups

Reporting group title	Ponatinib 15 mg Adult Equivalent
-----------------------	----------------------------------

Reporting group description:

Participants received weight-based dose of ponatinib tablets 15 mg adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) up to Day 70 (end of consolidation) followed by optional ponatinib continuation in Phase 1.

Reporting group title	Ponatinib 30 mg Adult Equivalent
-----------------------	----------------------------------

Reporting group description:

Participants received weight-based dose of ponatinib tablets 30 mg adult-equivalent, orally, once daily in combination with chemotherapy backbone per standard regimen at the investigator's discretion in both reinduction block and consolidation block (35 days each including 29 days of treatment in combination with chemotherapy followed by a minimum 6-day rest period from chemotherapy with daily ponatinib only) up to Day 70 (end of consolidation) followed by optional ponatinib continuation in Phase 1.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 April 2020	The following changes were made as per Amendment 1: 1. Updated the timing of EFS, PFS, and OS assessments, and end of treatment 1 (EOT1). 2. Removed peripheral blood samples for MRD. 3. Updated the exclusion criterion for current systemic use of any medications or herbal supplements that are known to be strong inhibitors or strong inducers of cytochrome P450 3A4 (CYP3A). 4. Updated procedures for recording and reporting adverse events and serious adverse events. 5. Added definition of relapse from CR.
23 February 2021	The following changes were made as per Amendment 2: 1. Removed a dose of asparaginase therapy given in combination with ponatinib. 2. Updated the projected duration of study. 3. Updated the number of study sites and countries. 4. Updated inclusion/exclusion criteria.
23 May 2023	The following changes were made as per Amendment 3: 1. Modified inclusion and exclusion criteria. 2. Defined the second cohort (cohort 2) of the phase 1 portion of the study. 3. Revised the disease assessment at end of reinduction and consolidation blocks. 4. Modified the medical management of elevated alanine aminotransferase. 5. Changed a secondary objective to an exploratory objective. 6. Corrected the schedule of events (SOEs) on which days the study treatment was administered. 7. Updated the definition of progression-free survival event for death.
02 November 2023	The following changes were made as per Amendment 4: 1. Modified Phase 1 cohort 2 to enroll a single cohort for determination of RP2D rather than 2 weight groups with separate evaluations. 2. Modified the definition of related adverse events for DLT. 3. Modified dose modifications for ponatinib with the occurrence of lipase elevations and pancreatitis. 4. Modified the criteria for beginning a consolidation block or optional continuation therapy. 5. Updated the number of participants in Phase 1 portion of the study. 6. Updated the minimum percentage and number of days of ponatinib dosing required for a participant to be evaluable for DLTs.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
19 July 2024	The study enrollment was terminated per protocol due to DLTs observed in both dose cohorts in Phase 1 and the RP2D could not be determined leading to study termination by the Sponsor before Phase 2 could be initiated.	-

Notes:

### Limitations and caveats

None reported
