

Clinical trial results:

A randomized, placebo-controlled, double-blind, parallel-group, multi-center, proof-of-concept study to assess the efficacy and safety of BAY 1817080 in patients with overactive bladder (OAB) over a 12-week treatment period

Summary

EudraCT number	2019-002575-34
Trial protocol	CZ SE PL PT GB DE AT
Global end of trial date	21 January 2022

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	21 January 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the efficacy of eliapixant 125 mg twice a day (BID) in comparison to placebo in the treatment of OAB with urgency urinary incontinence (UUI) over a 12-week treatment period

Protection of trial subjects:

The conduct of this clinical study met all local legal and regulatory requirements. The study was conducted in accordance with ethical principles that have their origin in the Declaration of Helsinki and the International Council for Harmonization guideline E6: Good Clinical Practice. Before entering the study, the informed consent was read by and explained to all the subjects. Participating subjects signed informed consent form and could withdraw from the study at any time without any disadvantage and without having to provide a reason for this decision. Only investigators qualified by training and experience were selected as appropriate experts to investigate the study drug.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 September 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 31
Country: Number of subjects enrolled	Portugal: 5
Country: Number of subjects enrolled	Sweden: 10
Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Czechia: 31
Country: Number of subjects enrolled	Germany: 13
Country: Number of subjects enrolled	Australia: 4
Country: Number of subjects enrolled	Singapore: 1
Country: Number of subjects enrolled	New Zealand: 2
Worldwide total number of subjects	99
EEA total number of subjects	92

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	60
From 65 to 84 years	39
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 28 centers in 9 countries with first subject first visit on 16-Sep-2020 and last subject last visit on 21-Jan-2022

Pre-assignment

Screening details:

Overall, 202 subjects were screened and 43 subjects failed screening. 159 subjects were assigned to run-in period, 59 of whom failed run-in. A total of 100 subjects were randomly assigned to 2 treatment arms (51 to eliapixant 125 mg BID and 49 to placebo). One subject in the placebo arm did not receive any study drug.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Blinding implementation details:

During the run-in period, subjects were blinded for run-in treatment. Investigator and sponsor knew that subjects received run-in placebo treatment. After randomization, subject, investigator and sponsor were blinded to the identity of the randomized study intervention.

Arms

Are arms mutually exclusive?	Yes
Arm title	Eliapixant 125mg BID

Arm description:

Subjects received 125 mg oral doses of eliapixant, administered twice daily at approximately the same time each day 12 hours apart over the course of 12 weeks

Arm type	Experimental
Investigational medicinal product name	Eliapixant (BAY1817080)
Investigational medicinal product code	BAY1817080
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

125 mg twice daily (BID), administered orally for 12 weeks

Arm title	Placebo
------------------	---------

Arm description:

Subjects received oral doses of placebo, administered twice daily at approximately the same time each day 12 hours apart over the course of 12 weeks

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Placebo twice daily (BID), administered orally for 12 weeks

Number of subjects in period 1	Eliapixant 125mg BID	Placebo
Started	51	48

Statistical analyses

Statistical analysis title	Bayesian mixed model
Statistical analysis description:	
95% one sided upper credible intervals were calculated. The posterior probability of eliapixant treatment resulting in a larger reduction of UUI episodes compared to placebo treatment over Week 4, 8 and 12 was 40.3%. According to the prespecified decision criterion, the targeted posterior probability of 90% could not be reached and no treatment effect could be obtained.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the start of study intervention (at start of run-in) until the follow-up visit (up to 18 weeks)

Adverse event reporting for the deaths (all causes) considers all deaths that occurred at any time during the study before the last contact.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
13 October 2020	<ul style="list-style-type: none">• Exclusion criterion #15 was modified to exclude subjects with systolic/diastolic blood pressure levels $\geq 160/100$ mmHg.• Positive hepatitis B and C were added in exclusion criterion #19.• Section on potential phototoxicity and instructions to avoid excessive exposure to sunlight were removed.• Text for the organic-anion-transporting polypeptide 1B1/1B3 (OATP1B1/1B3), breast cancer resistance protein (BCRP) and P-glycoprotein (P-gp) substrates in Table 6-1 was revised.• Statistical considerations adjusted for coronavirus disease 2019 (COVID-19) related issues.• Additional information will also be recorded for smell-related AEs if reported spontaneously by the subject.• Anti-hepatitis D and E virus antibodies were added in the list of laboratory assessments for liver safety in case close observation is to be initiated.• Wording for non-specific symptoms which might be associated with liver dysfunction in Section 2.3.3.4 was revised and the pre-existing text in Section 10.6.2 was moved to Section 10.6.1.• Wording of repeated follow-up samplings was revised.• Stopping criteria for close liver observation was added.• Instructions were added that for study subjects who take biotin-containing supplements, the last dose of the supplement should be at least 72 hours prior to FSH hormone or ferritin testing.• Wording randomly assigned to "study intervention" was changed to randomly assigned to "double-blind treatment".• Row for "mRNA (anti-HCV and HCV mRNA)" was deleted.• Anti-native double-stranded deoxyribonucleic acid (DNA) Antibodies was changed to "Anti-nuclear antibodies (ANA)".• "Anti-Smith antibodies" was changed to "anti-smooth muscle antibodies".• Text for the increase of concentrations of total serum bilirubin in studies with healthy volunteers was removed.• Wordings of the primary, secondary and exploratory endpoints were updated.• Psychometric analyses of bladder diary were planned to be conducted alongside the statistic
22 June 2021	<ul style="list-style-type: none">• Protocol version number was included in the Title page and removed from the header. Date is added in the header.• 2 new visits added for taking blood samples for liver monitoring.• Text updated regarding one case of moderate liver injury.• Text on blood samples for liver monitoring added.• Addition of extremely low body weight as an example to criterion #21.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
