Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 July 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	06 April 2022
Global end of trial reached?	Yes
Global end of trial date	06 April 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Evaluate efficacy of KZR-616 in patient with Polymyositis (PM) or Dermatomyositis (DM)

Protection of trial subjects:

Investigators and all parties involved in this study conducted the study in adherence to the ethical principles based on the Declaration of Helsinki, ICH guidelines for cGCP, and the applicable laws and regulatory requirements.

IRB/IEC approval of the study and relevant study information (e.g. protocol, informed consent form (ICF), patient-facing materials) was obtained before initiation of study sites or releasing study drug to sites. Extensions/renewals of the approval were obtained as necessary.

Written informed consent (signed and dated) was obtained before any study-related procedures were performed. Patients were given every opportunity to ask for clarification and were given ample time to consider the study. Patients may refuse to enter the study or to withdraw from the study at any time, without consequences for their further care or penalty or loss of benefits to which the patient is otherwise entitled.

All Investigators promptly reported any new information that may have adversely affected patient safety or the study conduct and submitted study status summaries to the IRB/IEC as required. Patients were informed about new information available that was relevant to their willingness to continue participation in the study and were reconsented to the IRB/IEC/regulatory authorities currently approved ICF. Patients' identity remained confidential in any presentations or publications of the study results. All personal data collected and processed for the purposes of this study were managed with adequate precautions to ensure confidentiality of data, and in accordance with the applicable laws and regulations on personal data protection.

A study-specific Data Monitoring Committee (Safety Review Committee per BfArM) met to review accumulating safety data, study conduct and progress and to make recommendations about the study progress on a regular basis. Each voting member provided their recommendation at the conclusion of each meeting.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	14 January 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Czechia: 1
Country: Number of subjects enrolled	United States: 24
Worldwide total number of subjects	25
EEA total number of subjects	1

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	21
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Study entry criteria included adults with PM or DM based on the 2017 EULAR/ACR Classification Criteria with confirmed active disease (MMT-8 score of 80-136 [0-150] and two other abnormal core set measures) and inadequate response to 12 weeks of corticosteroids or at least one (1) immunosuppressant.

Period 1

Period 1 title	Treatment Period 1
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	No
Arm title	Arm A: Period 1 (Zetomipzomib)

Arm description:

Zetomipzomib 30 mg SC weekly for 2 weeks, then 45 mg SC weekly for 14 weeks

Arm type	Experimental
Investigational medicinal product name	zetomipzomib
Investigational medicinal product code	
Other name	KZR-616
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

30 mg subcutaneous injections of zetomipzomib once weekly for the first two weeks, then 45 mg zetomipzomib SC QW for the remaining 14 weeks of treatment

Arm title	Arm B: Period 1 (Placebo)
------------------	---------------------------

Arm description:

Placebo SC weekly for 16 weeks

Arm type	Placebo
Investigational medicinal product name	sterile water for injection
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solvent for parenteral use
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching placebo was administered by SC injection QW to patients in Arm B during Period 1 and patients in Arm A during Period 2.

Number of subjects in period 1	Arm A: Period 1 (Zetomipzomib)	Arm B: Period 1 (Placebo)
Started	13	12
Completed	10	12
Not completed	3	0
Consent withdrawn by subject	3	-

Period 2

Period 2 title	Treatment Period 2
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Carer, Assessor

Arms

Are arms mutually exclusive?	No
Arm title	Arm A: Period 2 (Placebo)

Arm description:

Placebo SC weekly for 16 weeks

Arm type	Placebo
Investigational medicinal product name	sterile water for injection
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solvent for parenteral use
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching placebo was administered by SC injection QW to patients in Arm B during Period 1 and patients in Arm A during Period 2.

Arm title	Arm B: Period 2 (Zetomipzomib)
------------------	--------------------------------

Arm description:

Zetomipzomib 30 mg SC weekly for 2 weeks, then 45 mg SC weekly for 14 weeks

Arm type	Experimental
Investigational medicinal product name	zetomipzomib
Investigational medicinal product code	
Other name	KZR-616
Pharmaceutical forms	Powder for solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

30 mg subcutaneous injections of zetomipzomib once weekly for the first two weeks, then 45 mg zetomipzomib SC QW for the remaining 14 weeks of treatment

Number of subjects in period 2	Arm A: Period 2 (Placebo)	Arm B: Period 2 (Zetomipzomib)
Started	10	12
Completed	8	12
Not completed	2	0
Consent withdrawn by subject	1	-
Investigator decision	1	-

Subject analysis set title	Baseline
Subject analysis set type	Full analysis

Subject analysis set description:

For the statistical analysis of the primary endpoint, Total Improvement Score (TIS) was assessed using Week 0 as the baseline (before zetomipzomib [KZR-616] administration) timepoint for both Arm A and Arm B patients.

Primary: Mean Change in the Total Improvement Score (TIS) From Start to End of Zetomipzomib (KZR-616) Treatment Period

End point title	Mean Change in the Total Improvement Score (TIS) From Start to End of Zetomipzomib (KZR-616) Treatment Period
-----------------	---

End point description:

The primary efficacy endpoint was mean change from start to end of zetomipzomib (KZR-616) Treatment Periods in the Total Improvement Score (TIS), which ranges from 0 to 100 [low of 0 to high of 100, where higher scores are better]. Mean change in TIS was calculated by comparing the Baseline and post Baseline observations for patients in both KZR-616 treatment periods combined.

Note: TIS scores for placebo treatment periods are presented in this outcome measure but were not included in the primary outcome measure analysis.

End point type	Primary
----------------	---------

End point timeframe:

16 weeks in each Treatment Period (32 weeks total)

Units: score on a scale				
arithmetic mean (standard deviation)	28.8 (± 3.7)	0 (± 0)		

Statistical analyses

Statistical analysis title	Change in Score from Baseline
----------------------------	-------------------------------

Statistical analysis description:

Mean change in TIS was calculated by comparing the baseline and post baseline observations within patients for the zetomipzomib (KZR-616) treatment periods combined (Arm A: Period 1 + Arm B: Period 2).

Due to system limitations, the number of "Subjects in this analysis" reads 44 but should be 22. This discrepancy occurs from subjects being counted twice, once at baseline group and once in the treatment group, even though they should only be counted once.

Comparison groups	Arm A: Period 1 + Arm B: Period 2 v Baseline
Number of subjects included in analysis	44
Analysis specification	Pre-specified
Analysis type	other ^[1]
P-value	= 0.0001
Method	mixed model repeated measures

Notes:

[1] - The mixed model repeated measures (MMRM) statistical approach was used for this analysis. The MMRM statistical approach was used for this analysis since it is preferred in Longitudinal Clinical Trial Data with missing data and increases the power by allowing for more data to be incorporated from different timepoints.

Secondary: Proportion of Patients With TIS Response

End point title	Proportion of Patients With TIS Response
End point description:	
The proportion of patients with an increase of ≥ 20 points on the TIS from start to end of zetomipzomib (KZR-616) treatment. TIS response is categorized by the following improvement thresholds:	
Minimal response = TIS ≥ 20	
Moderate response = TIS ≥ 40	
Major response = TIS ≥ 60	
This endpoint was assessed by comparing Week 16 versus Week 0 for patients allocated to Arm A and Week 32 versus Week 16 for patients allocated to Arm B. This re-baselining approach was utilized to maximize the precision for assessment of zetomipzomib effect in Arm B.	
End point type	Secondary
End point timeframe:	
32 weeks	

End point values	Arm A: Period 1 (Zetomipzomib)	Arm B: Period 1 (Placebo)	Arm A: Period 2 (Placebo)	Arm B: Period 2 (Zetomipzomib)

Secondary: Mean Percent Change From Baseline From Start to End of Treatment in the IMACS Individual CSAMs

End point title	Mean Percent Change From Baseline From Start to End of Treatment in the IMACS Individual CSAMs
-----------------	--

End point description:

Mean percent change from baseline of the IMACS CSAMs which consists of:

Physician Global Assessment (MDGA) - 5 point Likert scale and 10cm Visual Analogue Scale

Patient Global Assessments of Disease Activity (PtGADA) - 10cm Visual Analogue Scale

Manual Muscle Testing-8 Muscle Groups (MMT-8) - scores range from 0 - 260, high scores are better

Health Assessment Questionnaire-Disability Index (HAQ-DI) - scores range from 0 - 3, high scores are worse

Myositis Disease Activity Assessment Tool (MDAAT, 2005 version) - scores range from 0 - 60, high scores are worse

Muscle enzymes (clinical laboratory assessments): Summarize the most abnormal clinical laboratory assessment at baseline between creatine kinase (CK), aldolase, lactate dehydrogenase (LDH), alanine aminotransferase (ALT), and aspartate aminotransferase (AST).

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? No

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was not powered to detect statistical differences between treatment arms. Crossover study design with no washout period may have confounded assessments. Limited information from safety follow-up as most patients elected to join the OLE study.
