Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	30 May 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	30 May 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objectives of this study are to examine the clinical efficacy of nusinersen administered intrathecally at higher doses to participants with spinal muscular atrophy (SMA), as measured by change in Children's Hospital of Philadelphia-Infant Test of Neuromuscular Disorders (CHOP-INTEND) total score (Part B); to examine the safety and tolerability of nusinersen administered intrathecally at higher doses to participants with SMA (Parts A and C).

Protection of trial subjects:

Written informed consent was obtained from each subject's parent or legal guardian prior to evaluations being performed for eligibility. Adequate time to review the information in the informed consent and ask questions concerning all portions of the conduct of the study was provided. Through the informed consent process, awareness of the purpose of the study, the procedures, the benefits and risks of the study, the discomforts and the precautions taken was made. Any side effects or other health issues occurring during the study were followed up by the study doctor. Subjects were able to stop taking part in the study at any time without giving any reason.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	26 March 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 23
Country: Number of subjects enrolled	Japan: 6
Country: Number of subjects enrolled	Germany: 4
Country: Number of subjects enrolled	Italy: 4
Country: Number of subjects enrolled	Spain: 19
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Taiwan: 9
Country: Number of subjects enrolled	Estonia: 1
Country: Number of subjects enrolled	Mexico: 15
Country: Number of subjects enrolled	Saudi Arabia: 15
Country: Number of subjects enrolled	China: 11
Country: Number of subjects enrolled	Chile: 7

Country: Number of subjects enrolled	Poland: 4
Country: Number of subjects enrolled	Russian Federation: 8

Country: Number of subjects enrolled	Lebanon: 3
Country: Number of subjects enrolled	Colombia: 2
Country: Number of subjects enrolled	Hungary: 2
Worldwide total number of subjects	145
EEA total number of subjects	34

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	4
Infants and toddlers (28 days-23 months)	71
Children (2-11 years)	39
Adolescents (12-17 years)	7
Adults (18-64 years)	23
From 65 to 84 years	1
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Participants took part at the investigative sites in the United States, Brazil, Canada, Chile, China, Colombia, Estonia, Germany, Hungary, Italy, Japan, Lebanon, Mexico, Poland, Russia, Saudi Arabia, Spain, and Taiwan from 26 March 2020 to 30 May 2024.

Pre-assignment

Screening details:

A total of 145 participants diagnosed with spinal muscular atrophy (SMA) were enrolled in the 3-parts (Parts A, B, and C). Of which, 117 of participants completed the study.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Part A: 28/28 Milligrams (mg) Nusinersen

Arm description:

Participants with later-onset SMA received 3 loading doses of 28 mg of nusinersen, intrathecally (IT), on Days 1, 15 and 29 followed by 2 maintenance doses of 28 mg on Days 149 and 269.

Arm type	Experimental
Investigational medicinal product name	Nusinersen
Investigational medicinal product code	BIIB058
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

Administered as specified in the treatment arm.

Arm title	Part B: Infantile-Onset SMA: 12/12 mg Nusinersen
------------------	--

Arm description:

Participants with infantile-onset SMA in the control group received 4 loading doses of 12 mg of nusinersen, IT, on Days 1, 15, 29, and 64 followed by 2 maintenance doses of 12 mg on Days 183 and 279. Sham procedure was administered on Day 135.

Arm type	Experimental
Investigational medicinal product name	Nusinersen
Investigational medicinal product code	BIIB058
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Intrathecal use

Dosage and administration details:

Administered as specified in the treatment arm.

Arm title	Part B: Infantile-Onset SMA: 50/28 mg Nusinersen
------------------	--

Arm description:

Participants with infantile-onset SMA received 2 loading doses of 50 mg of nusinersen, IT, on Days 1 and 15 followed by 2 maintenance doses of 28 mg on Days 135 and 279. Sham procedure was administered on Days 29, 64 and 183.

Arm type	Experimental

Reporting group title	Part B: Later-Onset SMA: 12/12 mg Nusinersen
Reporting group description: Participants with later-onset SMA in the control group received 4 loading doses of 12 mg of nusinersen, IT, on Days 1, 15, 29, and 64 followed by 2 maintenance doses of 12 mg on Days 183 and 279. Sham procedure was administered on Day 135.	
Reporting group title	Part B: Later-Onset SMA: 50/28 mg Nusinersen
Reporting group description: Participants with later-onset SMA received 2 loading doses of 50 mg of nusinersen, IT, on Days 1 and 15 followed by 2 maintenance doses of 28 mg on Days 135 and 279. Sham procedure was administered on Days 29, 64 and 183.	
Reporting group title	Part C: 50/28 mg Nusinersen
Reporting group description: Participants with infantile and later-onset SMA who had been receiving the approved dose of 12 mg for at least 1 year prior to entry, received a single bolus dose of 50 mg of nusinersen, IT, on Day 1 (4 months after their most recent maintenance dose of 12 mg) followed by 2 maintenance doses of 28 mg on Days 121 and 241.	
Subject analysis set title	CS3B Matched Sham Control Group
Subject analysis set type	Full analysis
Subject analysis set description: Historical data of participants who received sham treatment, IT, on Days 1, 15, 29, 64, 183, and 302 in the double-blind, phase 3 study CS3B (2013-004422-29), was used as control in the current study.	

Primary: Part B Infantile-onset SMA: Change From Baseline in CHOP-INTEND Total Score for 50/28mg Nusinersen Versus CS3B Matched Sham Control Group

End point title	Part B Infantile-onset SMA: Change From Baseline in CHOP-INTEND Total Score for 50/28mg Nusinersen Versus CS3B Matched Sham Control Group ^[1]
End point description: The CHOP-INTEND test was designed to evaluate the motor skills of infants with significant motor weakness. It included 16 items (capturing neck, trunk, and proximal and distal limb strength), nine of which were scored 0, 1, 2, 3, or 4, five were scored as 0, 2, or 4, one was scored as 0, 1, 2, or 4, and one as 0, 2, 3, or 4 with greater scores indicating greater muscle strength. Total score ranged from 0 (worst possible score) and 64 (best possible score). The change from baseline to Day 183 in the CHOP-INTEND total score was compared to CS3B study (2013-004422-29) sham control group using the joint-rank methodology to account for mortality. As stated in protocol a matched sham set was defined for the analysis of this outcome measure. Matched sham set comprised of sham control participants of the CS3B study (2013-004422-29) identified by a matching algorithm and all of 50/28 mg participants in the ITT set.	
End point type	Primary

End point timeframe:

Baseline, Day 183

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.
Justification: Part B Infantile-onset SMA arms were planned to be analysed for this end point.

End point values	Part B: Infantile-Onset SMA: 50/28 mg Nusinersen	CS3B Matched Sham Control Group		
Subject group type	Reporting group	Subject analysis set		
Number of subjects analysed	50	20		
Units: score on scale				
least squares mean (confidence interval 95%)	42.9 (38.7 to 47.2)	16.9 (10.1 to 23.7)		

Statistical analyses

Statistical analysis title	Change From Baseline in CHOP-INTEND Total Score
Comparison groups	Part B: Infantile-Onset SMA: 50/28 mg Nusinersen v CS3B Matched Sham Control Group
Number of subjects included in analysis	70
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 ^[2]
Method	ANCOVA
Parameter estimate	Least square (LS) mean difference
Point estimate	26.06
Confidence interval	
level	95 %
sides	2-sided
lower limit	17.941
upper limit	34.172
Variability estimate	Standard error of the mean
Dispersion value	4.141

Notes:

[2] - The Analysis of Covariance (ANCOVA) model used rank score as response, treatment as fixed effect and disease duration at screening, baseline HINE 2, baseline CHOP INTEND total score as covariates. Rank score of baseline covariates was used in model.

Primary: Parts A and C: Number of Participants With Treatment-Emergent Adverse Events (TEAEs) and Serious Adverse Events (TESAEs)

End point title	Parts A and C: Number of Participants With Treatment-Emergent Adverse Events (TEAEs) and Serious Adverse Events (TESAEs) ^{[3][4]}
-----------------	--

End point description:

An adverse event (AE): any unfavorable & unintended sign (including an abnormal assessment such as an abnormal laboratory value), symptom, or disease temporally associated with use of an investigational product, whether or not related to investigational product. SAE: any untoward medical occurrence that at any dose resulted in death, in view of Investigator, placed participant at immediate risk of death, required inpatient hospitalization or prolongation of existing hospitalization, resulted in persistent or significant disability/incapacity, resulted in a birth defect. AE and SAEs were regarded as treatment-emergent if it was present prior to receiving first dose of nusinersen in current study and subsequently worsened in severity or was not present prior to receiving first dose of nusinersen and subsequently

appeared Part A: safety analysis set. Part C: ITT set. Safety set and ITT set included all participants who received at least one dose of nusinersen in the current study.

End point type	Primary
----------------	---------

End point timeframe:

Part A: From the first dose of the study drug up to Day 389, Part C: From the first dose of the study drug up to Day 361

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned for this endpoint.

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Parts A and C arms were planned to be analysed for this end point.

End point values	Part A: 28/28 Milligrams (mg) Nusinersen	Part C: 50/28 mg Nusinersen

Primary: Parts A and C: Number of Participants With Shifts From Baseline in Clinical Laboratory Parameters (Blood Chemistry Parameters)

End point title	Parts A and C: Number of Participants With Shifts From Baseline in Clinical Laboratory Parameters (Blood Chemistry Parameters) ^{[5][6]}
-----------------	--

End point description:

Blood chemistry parameters included protein, albumin, creatinine, blood urea nitrogen, bilirubin (total and direct), alkaline phosphatase, alanine aminotransferase, aspartate aminotransferase, gamma-glutamyl transferase, glucose, calcium, phosphorus, bicarbonate, chloride, sodium, potassium, cystatin C, and creatine kinase. Parameters were flagged as low, normal/ high relative to normal range/ as unknown if no result was available, by Investigator. Here, shift to low indicates values that were normal, high/ unknown at baseline and shifted to low values postbaseline. Shift to high indicates values that were normal, low or unknown at baseline and shifted to high postbaseline. Categories with at least one participant with shift from baseline are reported. Part A: safety analysis set. Part C: ITT set. Safety and ITT set included all participants who received at least one dose of nusinersen. Number analyzed 'n' is number of participants evaluable for analysis of the specified parameter.

End point type	Primary
----------------	---------

End point timeframe:

Parts A and C: Baseline up to Day 302

Notes:

[5] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned for this endpoint.

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Parts A and C arms were planned to be analysed for this end point.

End point title	Parts A and C: Number of Participants With Shifts From Baseline in Clinical Laboratory Parameters (Hematology Parameters) ^{[7][8]}
-----------------	---

End point description:

Hematology parameters included complete blood cell count, with differential and platelet count, and absolute neutrophil count. These parameters were flagged as low, normal, or high relative to parameter's normal range or as unknown if no result was available, by the Investigator. Here, shift to low indicates values that were normal, high or unknown at baseline and shifted to low values postbaseline. Shift to high indicates values that were normal, low or unknown at baseline and shifted to high postbaseline. The categories with at least one participant with shift from baseline in these parameters are reported. Part A: safety analysis set. Part C: ITT set. Safety set and ITT set included all participants who received at least one dose of nusinersen in the current study. 'Number analysed (n)' indicates the number of participants evaluable for the specified hematology parameter.

End point type	Primary
----------------	---------

End point timeframe:

Parts A and C: Baseline up to Day 302

Notes:

[7] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive statistics were planned for this endpoint.

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Parts A and C arms were planned to be analysed for this end point.

Secondary: Part B Infantile-onset SMA: Percentage of Hammersmith Infant Neurological Examination (HINE) Section 2 Motor Milestone Responders for 50/28mg Nusinersen Versus CS3B Matched Sham Control Group

End point title	Part B Infantile-onset SMA: Percentage of Hammersmith Infant Neurological Examination (HINE) Section 2 Motor Milestone Responders for 50/28mg Nusinersen Versus CS3B Matched Sham Control Group ^[47]
-----------------	---

End point description:

Section 2 of HINE was used to assess motor milestones of participants. It's composed of 8 motor milestone categories: voluntary grasp, ability to kick in supine position, head control, rolling, sitting, crawling, standing, & walking. Motor milestone responder: a participant that demonstrated atleast a 2-point increase in ability to kick category or increase to maximal score on that category or a 1-point increase in motor milestones category of head control, rolling, sitting, crawling, standing, or walking & demonstrated improvement in more categories than worsening. Participants who died or withdrew from study were considered as non-responders. A matched sham set was defined per protocol for analysis of this outcome measure. Matched sham set comprised of sham control participants of CS3B study (2013-004422-29) identified by a matching algorithm& all of 50/28 mg participants in the ITT set.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline up to Day 183

Notes:

[47] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Part B Infantile-onset SMA arms were planned to be analysed for this end point.

End point values	Part B: Infantile-Onset SMA: 50/28 mg Nusinersen	CS3B Matched Sham Control Group		
Subject group type	Reporting group	Subject analysis set

Secondary: Part B Infantile-onset SMA: Change From Baseline in CHOP-INTEND Total Score for 50/28mg Nusinersen Versus 12/12mg Nusinersen

End point title	Part B Infantile-onset SMA: Change From Baseline in CHOP-INTEND Total Score for 50/28mg Nusinersen Versus 12/12mg Nusinersen ^[48]
-----------------	--

End point description:

The CHOP-INTEND test was designed to evaluate the motor skills of infants with significant motor weakness. It included 16 items (capturing neck, trunk, and proximal and distal limb strength), nine of which were scored 0, 1, 2, 3, or 4, five were scored as 0, 2, or 4, one was scored as 0, 1, 2, or 4, and one as 0, 2, 3, or 4 with greater scores indicating greater muscle strength. Total scores ranged from 0 (worst possible score) and 64 (best possible score). The change from baseline to Day 302 in the CHOP-INTEND total score was analyzed using the joint-rank methodology to account for mortality. ITT set included all participants who were randomized and received at least one dose of nusinersen.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Day 302

Notes:

[48] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Part B Infantile-onset SMA arms were planned to be analysed for this end point.

-----------------	---

End point description:

RULM test was developed to assess upper limb functional abilities. RULM test: total 20 items. First item assessed on 7-point scale (0:No useful function to 6-Can abduct both arms simultaneously, elbows in extension in full circle until they touch above head). This item did not contribute to total score. For remaining 19 items, 18 items assessed on 3-point scale: 0-Unable to achieve independently; 1-Modified method but achieves goal independent of physical assistance from another person; 2-Normal -achieves goal without any assistance. One remaining item, assessed as 0 or 1. For each item, score was collected on left & right side. Derived total score=summing scores of 19 individual items ranging from 0-if participant fails all activities to 37-if participant achieves all activities. Higher scores=increased upper limb function. ITT set included all participants who were randomized and received at least one dose of nusinersen.

Secondary: Part B Later-onset SMA: Number of New World Health Organization (WHO) Motor Milestones for 50/28mg Nusinersen Versus 12/12mg Nusinersen

End point title	Part B Later-onset SMA: Number of New World Health Organization (WHO) Motor Milestones for 50/28mg Nusinersen Versus 12/12mg Nusinersen ^[64]
-----------------	---

End point description:

The WHO motor milestones were a set of six milestones in motor development: sitting without support, standing with assistance, hands and knees crawling, walking with assistance, standing alone and walking alone. The examiner recorded an overall rating of the participant's emotional state and then for each milestone one of the following four classifications: no (inability) - child tried but failed to perform the milestone, no (refusal) - child refused to perform despite being calm and alert, yes - child was able to perform the milestone, unable to test - could not be tested because of irritability, drowsiness or sickness. Mean of number of new milestones achieved was calculated and reported in this outcome measure. ITT set included all participants who were randomized and received at least one dose of nusinersen. 'Subjects analysed' signifies number of participants evaluable for this outcome measure.

End point type	Secondary

Secondary: Part B Later-onset SMA: Change From Baseline in Assessment of Caregiver Experience with Neuromuscular Disease (ACEND) for 50/28mg Nusinersen Versus 12/12mg Nusinersen

End point title	Part B Later-onset SMA: Change From Baseline in Assessment of Caregiver Experience with Neuromuscular Disease (ACEND) for 50/28mg Nusinersen Versus 12/12mg Nusinersen ^[65]
-----------------	--

End point description:

ACEND instrument was designed to quantify caregiver impact experienced by parents/caregivers of children affected with severe neuromuscular diseases, including children with SMA. The ACEND included a total of seven domains assessing physical impact (including feeding/grooming/dressing, sitting/play, transfers, and mobility) and general caregiver impact (including time, emotion, and finance, and each domain comprised several items. The total score for each domain was calculated on a scale of 0 to 100, with a higher score indicating a decreased caregiver burden. A negative change from baseline indicates an increased caregiver burden. ITT set included all participants who were randomized and received at least one dose of nusinersen.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Day 302

Notes:

[65] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Part B Later-onset SMA arms were planned to be analysed for this end point.

End point values	Part B: Later-Onset SMA: 12/12 mg Nusinersen	Part B: Later-Onset SMA: 50/28 mg Nusinersen		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	8	16		
Units: score on scale				
least squares mean (confidence interval 95%)				
Feeding/Grooming/Dressing Total Score	7.9 (-4.8 to 20.6)	8.3 (-0.2 to 16.7)		
Sitting/Play Total Score	10.3 (0.6 to 20.0)	10.1 (3.6 to 16.6)		
Transfers Total Score	-0.0 (-10.9 to 10.9)	9.9 (2.6 to 17.2)

Secondary: Part B Later-onset SMA: Change From Baseline in Pediatric Quality of Life Inventory™ (PedsQL) for 50/28mg Nusinersen Versus 12/12mg Nusinersen

End point title	Part B Later-onset SMA: Change From Baseline in Pediatric Quality of Life Inventory™ (PedsQL) for 50/28mg Nusinersen
-----------------	--

End point description:

PedsQL was used to measure health related quality of life (HRQOL) in children & adolescents. PedsQL generic core scale included assessment of physical functioning, emotional functioning, social functioning, and school functioning [PedsQL Inventory total score (PQLI)] and PedsQL Neuromuscular Module [Neuromuscular total score (PQLN)] measured HRQOL dimensions specific to with neuromuscular disorders, including SMA. Four dimensions were collected, each item scored on a 5-point ordinal scale (0=Never to 4=Almost Always). Items were reversed scored and were linearly transformed to a 0-100 scale. Total scale score was calculated as sum of all items over number of items answered on all scales. If more than 50% of items or more were missing, scale score was not computed. Higher scores indicated better health related quality of life. ITT set. Subjects analysed: number of participants evaluable for this endpoint. 'Number analysed (n)': number of participants evaluable for this endpoint.

Statistical analyses

No statistical analyses for this end point

Secondary: Part B: Number of Participants With Shift From Baseline in ECGs

End point title	Part B: Number of Participants With Shift From Baseline in ECGs ^[74]
-----------------	---

End point description:

The ECGs were assessed by the investigator to be normal, abnormal and abnormal AE. The number of participants with ECG shifts from normal to each of the categorical values denoting an abnormal scan (abnormal not AE, abnormal AE) was assessed. Shift from baseline to worst post-baseline values were reported. The categories with at least one participant with shift from baseline in ECG are reported. Safety set included all participants who received at least one dose of nusinersen.

End point type	Secondary

Secondary: Parts A, B and C: Number of Participants With Clinical Global Impression of Change (CGIC)

End point title	Parts A, B and C: Number of Participants With Clinical Global Impression of Change (CGIC)
-----------------	---

End point description:

The CGIC scale was a 7 point scale that required the clinician to assess how much the participant's illness had changed relative to a baseline state at the beginning of the intervention, where 1=very much improved, 2=much improved, 3=minimally improved, 4=no change, 5=minimally worse, 6=much worse, 7=very much worse. Higher rating indicates worsening of the condition. A separate CGIC assessment was performed by the Investigator (I) and caregiver (C). The categories with at least one participant having a CGIC score was reported. ITT set included all participants who received at least one dose of nusinersen in the current study. 'Subjects analysed' signifies number of participants evaluable for this endpoint. Number analysed 'n' indicates the number of participants evaluable for the specified category.

Secondary: Part A: Change From Baseline in the Parent Assessment of Swallowing Ability (PASA) Scale

End point title	Part A: Change From Baseline in the Parent Assessment of Swallowing Ability (PASA) Scale ^[93]
-----------------	--

End point description:

PASA was assessed using a questionnaire. Caregivers were asked a series of questions regarding mealtime behavior of participant. PASA questionnaire was developed to assess signs & symptoms of dysphagia. It included 33 items across 4 domains: general feeding, drinking liquids, eating solid foods, & assessment of swallowing concerns. Items in domains general feeding, drinking liquids, & eating solid foods assessed with 5 levels of response scored as 4-Never,3-Rarely,2-Sometimes,1-Often,&0-Always. Domain for assessing swallowing concerns has 4 levels of responses scored as: 3-Strongly Disagree, 2-Disagree, 1-Agree, 0-Strongly Agree. Higher score= improvement. Negative change from baseline=decrease in swallowing ability. From domains 'drinking liquids' and 'eating solid foods', 2 items (attempted to drink liquids and eat solid foods) were assessed as "Yes"/"No", reported in another outcome measure. ITT set. 'Number analysed' =number of subjects evaluable for specified parameter.

End point description:

Section 2 of the HINE was used to assess motor milestones of the participants. Its composed of 8 motor milestone categories: voluntary grasp, ability to kick in supine position, head control, rolling, sitting, crawling, standing, and walking. Within each of these categories, participants can progress from complete absence of a motor ability (the lowest level in each category) through multiple milestones (2 to 4 levels in each category) to the highest level within the category. The 8 categories of HINE Section 2 can be summed to give a total score that ranges from 0 to 26. Safety set included all participants who received at least one dose of nusinersen. Subjects analysed signifies number of participants evaluable for this endpoint. '99999' signifies that since only one participant was evaluable, standard deviation (SD) was not estimated.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Day 302

Notes:

[104] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Part C arm was planned to be analysed for this endpoint.

End point values	Part C: 50/28 mg Nusinersen			
Subject group type	Reporting group			
Number of subjects analysed	1			
Units: score on scale				
arithmetic mean (standard deviation)	2.0 (± 99999)			

Statistical analyses

No statistical analyses for this end point

Secondary: Part A: Number of Participants With Shift From Baseline in PASA Scale Items-Attempted to Drink Liquids and Attempted to Eat Solid Foods

End point title	Part A: Number of Participants With Shift From Baseline in PASA Scale Items-Attempted to Drink Liquids and Attempted to Eat Solid Foods ^[105]
-----------------	--

End point description:

PASA was assessed using a questionnaire. Caregivers were asked a series of questions regarding the mealtime behavior of the participant. The PASA questionnaire was developed to assess the signs and symptoms of dysphagia. It included 33 items across 4 domains that cover general feeding, drinking liquids, eating solid foods, and assessment of swallowing concerns. The 2 items of domains drinking liquids (attempted to drink liquids), eating solid foods (attempted to eat solid foods) were assessed as "Yes"/"No". Data for the 2 items were summarized in terms of the shift from baseline. ITT set included all participants who received at least one dose of nusinersen.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Part A: From first dose of the study up to Day 389 Part B: From first dose of the study up to Day 399

Part C: From first dose of the study up to Day 361

Adverse event reporting additional description:

Safety set included all participants who received at least a dose of nusinersen. MedDRA version 24.0 was applied for Part A, MedDRA version 26.1 was applied for Part B, and MedDRA version 26.0 was applied for Part C.

Assessment type	Systematic

Reporting groups

Reporting group title	Part A: Nusinersen 28/28 Milligrams (mg)
-----------------------	--

Reporting group description:

Participants with later-onset SMA received 3 loading doses of 28 mg of nusinersen, intrathecally (IT), on Days 1, 15 and 29 followed by 2 maintenance doses of 28 mg on Days 149 and 269.

Reporting group title	Part B: Infantile-Onset SMA: 12/12 mg Nusinersen
-----------------------	--

Reporting group description:

Participants with infantile-onset SMA received 4 loading doses of 12 mg of nusinersen intrathecally on Days 1, 15, 29, and 64 followed by 2 maintenance doses of 12 mg on Days 183 and 279. Sham procedure was administered on Day 135.

Reporting group title	Part B: Infantile-Onset SMA: 50/28 mg Nusinersen
-----------------------	--

Reporting group description:

Participants with infantile-onset SMA received 2 loading doses of 50 mg of nusinersen intrathecally on Days 1 and 15 followed by 2 maintenance doses of 28 mg on Days 135 and 279. Sham procedure was administered on Days 29, 64 and 183.

Reporting group title	Part B: Later-Onset SMA: 12/12 mg Nusinersen
-----------------------	--

Reporting group description:

Participants with later-onset SMA received 4 loading doses of 12 mg of nusinersen intrathecally on Days 1, 15, 29, and 64 followed by 2 maintenance doses of 12 mg on Days 183 and 279. Sham procedure was administered on Day 135.

Reporting group title	Part B: Later-Onset SMA: 50/28 mg Nusinersen
-----------------------	--

Reporting group description:

Participants with later-onset SMA received 2 loading doses of 50 mg of nusinersen intrathecally on Days 1 and 15 followed by 2 maintenance doses of 28 mg on Days 135 and 279. Sham procedure was administered on Days 29, 64 and 183.

Reporting group title	Part C: Nusinersen 50/28 mg
-----------------------	-----------------------------

Reporting group description:

Participants with infantile and later-onset SMA who had been receiving the approved dose of 12 mg for at least 1 year prior to entry, received a single bolus dose of 50 mg of nusinersen intrathecally on Day 1 (4 months after their most recent maintenance dose of 12 mg) followed by 2 maintenance doses of 28 mg on Days 121 and 241.

Serious adverse events	Part A: Nusinersen 28/28 Milligrams (mg)	Part B: Infantile-Onset SMA: 12/12 mg Nusinersen	Part B: Infantile-Onset SMA: 50/28 mg Nusinersen

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 December 2019	<ul style="list-style-type: none">- Clarified that the primary objective for Part B was to examine efficacy, as measured by the change from baseline in CHOP INTEND total score.- Clarified that the remaining assessments that were used to evaluate the clinical efficacy of nusinersen for participants in Part B were secondary endpoints related to a secondary objective.- A separate table for Parts A and C objectives and endpoints was added to emphasize the differences between Part B and Parts A and C, and to clarify that safety was the primary objective for Parts A and C.
05 June 2020	<ul style="list-style-type: none">- Made revision to the study stopping rules to clarify that they only apply to the primary safety portions of the study.- The footnotes regarding ECG monitoring in schedule of activities (SoA) tables were revised to adjust the postdose ECG timing and address abnormal ECG results.- The loading dose visit windows for Parts A and B of Study 232SM203 were clarified and revised.- A footnote was added to SoA tables to ensure that efficacy assessments (CHOP INTEND, HFMSE, and RULM) were conducted twice prior to the first dose of study treatment.- Guidance was added on the number of participants with scoliosis and/or severe contractures to be included in Part C of the study.- The study duration was extended, in order to align the requirements of contraception use and reporting, the follow-up period of the study was extended for those participants who require contraception use and an assessment was added on Day 410, Day 420, and Day 382 for Part A, Part B, and Part C, respectively.- Inclusion and exclusion criteria was updated.- A new section was added to the protocol to provide additional details on ventilation use.
05 August 2020	<ul style="list-style-type: none">- Made revision to the study stopping rules so that they apply to all participants in Parts A and B of the study.- Language was added to the protocol regarding remote monitoring of study sites during the global coronavirus disease (COVID-19) pandemic.
01 October 2021	<ul style="list-style-type: none">- Increased the sample size by including an additional cohort of up to approximately 20 adult participants in Part C to allow collection of clinical data in adults transitioning from the currently approved nusinersen dosing regimen to a higher dose.- The timepoints for collection of vital signs, neurological examinations, and ECGs and the collection windows for plasma PK samples were updated for Parts B and C.- A schedule of activities table specifically for Part C Cohort 2 was added.- A new table was added for participants in Part B who discontinued study treatment but agreed to remain in the study for follow-up.- Inclusion and exclusion criteria was updated for Parts A,B and C.- Added details on contracture assessment, to update the information on PedsQL for the adult participants who enrolled in Cohort 2 of Part C.- Updated growth parameters to allow for measurement of length for participants with later-onset SMA who were not able to have height measured.

05 May 2022	<ul style="list-style-type: none"> - Reduced the sample size for Part B infantile onset participants to 75. As a result, the total sample size for the study was adjusted to 145 participants. - Part B exclusion criteria was updated. - The PedsQL Measurement 4.0 Generic Core Scales and 3.0 Neuromuscular Module for participants ≥ 26 years of age were added. - Language was updated in laboratory safety assessments to further specify that total protein would be measured for the CSF local laboratory sample. - All references to an interim analysis being performed to assess the feasibility of borrowing participant data from Study CS3B were removed
-------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
