Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	25 October 2022
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	25 October 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary purpose of this study was to evaluate the safety and efficacy of PF-06480605 in participants with moderate to severe active ulcerative colitis (UC).

Protection of trial subjects:

All study subjects were required to read and sign an Informed Consent Form (ICF).

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 December 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 5
Country: Number of subjects enrolled	Belgium: 3
Country: Number of subjects enrolled	Bulgaria: 1

Worldwide total number of subjects	245
EEA total number of subjects	90

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	232
From 65 to 84 years	13
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 246 participants with moderate to severe UC took part in the study at 114 investigative sites across 23 countries from 19 December 2019 to 25 October 2022. The study consisted of a 12-week induction period and a 40-week chronic therapy period.

Pre-assignment

Screening details:

Participants were randomized in 2:2:2:2:3:1:1:1 to 1 of 9 treatment sequences to receive PF-06480605 50 milligrams (mg), 150 mg, 450 mg or a matched placebo during the induction & chronic therapy periods. 1 participant in PF-06480605 450 mg arm was enrolled but did not receive any treatment & hence was not presented in the subject disposition.

Period 1

Period 1 title	Induction Period
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Induction Period: Placebo

Arm description:

Participants received PF-06480605 matching placebo, as a subcutaneous (SC) injection, every 4 weeks (Q4W) up to Week 12.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

PF-06480605 matching placebo, as a SC injection, Q4W up to Week 12.

Arm title	Induction Period: PF-06480605 50 mg
------------------	-------------------------------------

Arm description:

Participants received PF-06480605, 50 mg, as a SC injection, Q4W up to Week 12.

Arm type	Experimental
Investigational medicinal product name	PF-06480605
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection
Routes of administration	Subcutaneous use

Dosage and administration details:

PF-06480605, 50 mg, as a SC injection, Q4W up to Week 12.

Arm title	Induction Period: PF-06480605 150 mg
------------------	--------------------------------------

Arm description:

Participants received PF-06480605, 150 mg, as a SC injection, Q4W up to Week 12.

Primary: Induction Period: Percentage of Participants Who Achieved Clinical Remission at Week 14

End point title	Induction Period: Percentage of Participants Who Achieved Clinical Remission at Week 14
End point description:	
Clinical remission was defined as total Mayo Score ≤ 2 , with no individual subscore > 1 . Mayo Score was a tool designed to measure disease activity for UC. The score ranges from 0 – 12 and was a composite of the four following assessments of disease activity: stool frequency subscore, rectal bleeding subscore, endoscopy subscore, and physician's global assessment (PGA) subscore. Each of the four assessments was rated with a score from 0 to 3, with higher scores indicating more severe disease activity. Percentages have been rounded off to the nearest whole number. Evaluable population ITT included all participants randomly assigned to investigational product (IP) and who took at least one dose of IP in induction period. Participants were analyzed according to the product they received. Number analyzed is the number of participants with data available for analysis.

Primary: Induction Period: Number of Participants With Treatment-Emergent Adverse Events (TEAEs)

End point title	Induction Period: Number of Participants With Treatment-Emergent Adverse Events (TEAEs) ^[4]
-----------------	--

End point description:

TEAEs was defined as all events that started on or after the first dosing day and time, but before the last dose plus the lag time. An adverse event (AE) was any untoward medical occurrence in a clinical study participant, temporally associated with the use of study intervention, whether or not considered related to the study intervention. An AE can therefore be any unfavorable and unintended sign (including an abnormal laboratory finding), symptom, or disease (new or exacerbated) temporally associated with the use of study intervention. Safety analysis population included all participants who received at least one dose of IP during the induction period. Participants were analyzed according to the product they received. Results may differ from publications that used Week 14 as the end of the AE reporting timeframe.

End point type	Primary
----------------	---------

End point timeframe:

From initiation of study treatment to either first dose in the chronic period or end of safety follow-up, whichever occurs first. (Approximately 16 weeks plus 12-week safety follow-up, if applicable.)

Notes:

Statistical analyses

Secondary: Induction and Chronic Periods: Percentage of Participants Who Achieved Remission as per Food and Drug Administration (FDA) Definition 1 (Modified Remission 1)

End point title	Induction and Chronic Periods: Percentage of Participants Who Achieved Remission as per Food and Drug Administration (FDA) Definition 1 (Modified Remission 1)
-----------------	--

End point description:

Modified remission 1 was defined as an endoscopic subscore = 0 (normal or inactive disease) or 1 (mild disease), stool frequency subscore = 0 (normal number of stools per day), and rectal bleeding subscore = 0 (no blood seen) at Week 14/Week 56. Mayo Score was a tool designed to measure disease activity for UC. The score ranges from 0 – 12 and was a composite of the four following assessments of disease activity: stool frequency subscore, rectal bleeding subscore, endoscopy subscore, and PGA subscore. Each of the four assessments was rated with a score from 0 to 3, with higher scores indicating more severe disease activity. Percentages have been rounded off to the nearest whole number. Evaluable ITT and mITT populations included all participants randomly assigned to IP and who took at least one dose of IP in induction and chronic, respectively. Number analyzed is the number of participants with data available for analysis.

Secondary: Induction and Chronic Periods: Percentage of Participants Who Achieved Endoscopic Remission

End point title	Induction and Chronic Periods: Percentage of Participants Who Achieved Endoscopic Remission
End point description:	<p>Endoscopic remission was defined as an endoscopic subscore of 0 (Normal or inactive disease) at Week 14/Week 56. Mayo Score was a tool designed to measure disease activity for UC. The score ranges from 0 – 12 and was a composite of the four following assessments of disease activity: stool frequency subscore, rectal bleeding subscore, endoscopy subscore, and PGA subscore. Each of the four assessments was rated with a score from 0 to 3. Higher scores indicate more severe disease activity. Percentages have been rounded off to the nearest whole number. Evaluable ITT and mITT populations included all participants randomly assigned to IP and who took at least one dose of IP in induction and chronic, respectively. Number analyzed is the number of participants with data available for analysis.</p>
End point type	Secondary

Secondary: Induction and Chronic Periods: Trough Concentration (Ctrough) of PF-06480605

End point title	Induction and Chronic Periods: Trough Concentration (Ctrough) of PF-06480605 ^[22]
-----------------	--

End point description:

Pharmacokinetic (PK) population included all participants randomly assigned to IP and received at least one dose of PF-06480605 for whom at least one concentration value was reported. Number analyzed is the number of participants with data available for analysis. n = number of participants with data available for analysis at the specified timepoint. 9999 = The mean and standard deviation (SD) was not estimable as samples were below the limit of quantification (BLQ). 99999 = No participants were analyzed at the specified timepoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Induction Period: 30 mins postdose (PD) on Day 1, Weeks (W) 4, 8, 12 and 14; Chronic Period: 30 mins PD on Weeks 16, 20, 24, 28, 32, 36, 40, 44, 48; End of Treatment (EOT) (W52) and Follow-up Visits (FUV) 1 (W56), 2 (W60) and 3 (W64)

Notes:

[22] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: Participants who received at least one dose of PF-06480605 are included here.

Secondary: Change From Baseline in Fecal Calprotectin Through the End of Study

End point title	Change From Baseline in Fecal Calprotectin Through the End of Study
-----------------	---

End point description:

Evaluable mITT population included all participants randomly assigned to IP and who took at least one dose of IP in the chronic period. Number analyzed is the number of participants with data available for analysis. n= number of participants with data available for analysis at the specified time point. As pre-specified in the statistical analysis plan (SAP), data is presented using the treatment sequence in the chronic period.

End point type	Secondary

Secondary: Chronic Period: Number of Participants With ADA and NABs to PF-06480605

End point title	Chronic Period: Number of Participants With ADA and NABs to PF-06480605
-----------------	---

End point description:

Samples were considered to be positive for ADA against PF-06480605 if the titer was ≥ 60 , and an ADA sample was considered to be negative if the titer was < 60 . Samples were considered to be positive for NAb against PF-06480605 if the titer was ≥ 5 , and an NAb sample was considered to be negative if the titer was < 5 . Evaluable mITT population included all participants randomly assigned to IP and who took at least one dose of IP in the chronic period. Number analyzed is the number of participants with data available for analysis. n= number of participants with data available for analysis at the specified timepoints. 9999 = No participants were analyzed at the specified timepoint.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Induction Period: Study treatment initiation to the first chronic dose or safety follow-up end, whichever is first. (~16 wks + 12 wk safety FU).

Chronic Period: First chronic dose to safety follow-up end. (~40 wks + 12 wk safety FU).

Adverse event reporting additional description:

Safety Population: All participants who took ≥ 1 dose of IP during induction. Evaluable mITT

Population: All randomized participants who took \geq dose of IP in the chronic period.

Induction: data may differ from publications using Week 14 as the AE reporting end. Chronic: data may differ from publications using Week 56 as the AE reporting end.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
01 September 2020	<ol style="list-style-type: none">1. Estimands regarding primary induction and chronic therapy period, related to what is considered a non-responder regarding early treatment discontinuation were clarified. Estimands section updated to reflect and clarify how a participants who discontinues study treatment prior to week 12 will be allocated regarding responder and non-responder.2. Various changes were implemented in the Schedule of Activities.3. Inclusion criterion weight, body mass index (BMI) was removed as the investigational drug was not dosed based on weight.4. Time period for collecting AE and SAE information: Protocol wording states, "through and including Visit 20; this was corrected to Visit 18.5. Mayo Scoring system for assessment of ulcerative colitis was updated: the modified endoscopic scoring system was used in this study. Friability was removed from endoscopic subscore of 1 and placed into the endoscopic subscore 2.
15 March 2022	<ol style="list-style-type: none">1. Modified estimands to permit exclusion of participants with missed visits due to COVID-19 from analysis.2. Chronic Therapy Period secondary endpoint change from baseline for fecal calprotectin, hsCRP, and sTL1A biomarkers in order to better understand the full trajectory over time was added.3. Tertiary endpoint for the Inflammatory Bowel Disease Questionnaire (IBDQ) to assess the impact of drug on a clinically meaningful threshold and more details around histopathology endpoints was added.4. Language was modified to clarify participants who withdraw from the treatment period should be followed for 3 study visits (one being the Early Withdrawal Visit) for a total of 12 weeks from the last dose of IP.4. Analysis methods were modified to align with similar analysis of binary endpoints, and to allow comparison with historical data from other studies and publications with similar endpoints on treatment effect-Return stool diary data collection tool from Early Withdrawal visit due to administrative error was removed6. Evaluable Population was updated to include ITT and mITT in order to distinguish between Induction and Chronic Period, and clarification was provided for Biomarker Analysis Population and clarified biomarker analysis population.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
