

association statistic vs OINTMENT vehicle was 0.0484 ($p=0.8258$). Approximately half of the subjects (57.14%) in the ATx201 OINTMENT 7% group achieved EASI50 with value of the general association statistic vs OINTMENT vehicle of 0.4209 ($p=0.5165$).

n: number of patients with characteristics; N: number of patients in the ITT population with respective treatment and available information for the respective visit; %: Calculated using the number of patients in the ITT population with respective treatment and available information for the respective visit as the denominator ($n/N \times 100$). Missing values are imputed using the LOCF
