

## Clinical trial results:

### A RANDOMIZED, DOUBLE-BLIND, PLACEBO-CONTROLLED TRIAL TO EVALUATE THE EFFICACY AND SAFETY OF LEBRIKIZUMAB IN PATIENTS WITH MODERATE-TO-SEVERE ATOPIC DERMATITIS

#### Summary

EudraCT number	2019-002932-10
Trial protocol	LT ES PL EE FR LV
Global end of trial date	03 May 2022

#### Results information

Result version number	v2
This version publication date	21 August 2022
First version publication date	06 July 2022
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> Corrections to outcome measures per CT.gov Quality Review.

#### Trial information

##### Trial identification

Sponsor protocol code	J2T-DM-KGAB, DRM06-AD04
-----------------------	-------------------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04146363
WHO universal trial number (UTN)	-
Other trial identifiers	Trial Number: 17801

Notes:

#### Sponsors

Sponsor organisation name	Eli Lilly and Company
Sponsor organisation address	Lilly Corporate Center, Indianapolis, IN, United States, 46285
Public contact	Available Mon - Fri 9 AM - 5 PM EST, Eli Lilly and Company, 1 877-CTLilly,
Scientific contact	Available Mon - Fri 9 AM - 5 PM EST, Eli Lilly and Company, 1 877-285-4559,

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	21 June 2021
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 June 2021
Global end of trial reached?	Yes
Global end of trial date	03 May 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective of this study is to evaluate the safety and efficacy of lebrikizumab compared with placebo in participants with moderate-to-severe atopic dermatitis.

Protection of trial subjects:

This study was conducted in accordance with International Conference on Harmonization (ICH) Good Clinical Practice, and the principles of the Declaration of Helsinki, in addition to following the laws and regulations of the country or countries in which a study is conducted.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	24 September 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	France: 7
Country: Number of subjects enrolled	Estonia: 8
Country: Number of subjects enrolled	Latvia: 11
Country: Number of subjects enrolled	Lithuania: 18
Country: Number of subjects enrolled	Poland: 81
Country: Number of subjects enrolled	Australia: 39
Country: Number of subjects enrolled	Canada: 23
Country: Number of subjects enrolled	Korea, Republic of: 34
Country: Number of subjects enrolled	United States: 190
Country: Number of subjects enrolled	Spain: 13
Worldwide total number of subjects	424
EEA total number of subjects	138

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0

Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	55
Adults (18-64 years)	338
From 65 to 84 years	29
85 years and over	2

## Subject disposition

### Recruitment

Recruitment details:

Reported are results for the Induction Period (Baseline to Week16), data for Maintenance Period (Week 16 to Week 52) will be posted at the time of final results reporting.

### Pre-assignment

Screening details:

No Text Entered

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Induction Period (Baseline-Week 16): Two subcutaneous (SC) injections of Placebo as a loading dose at Baseline and Week 2 followed by a single injection every 2 weeks (Q2W) from Week 4 until Week 14.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

Two subcutaneous (SC) injections of Placebo as a loading dose at Baseline and Week 2 followed by a single injection every 2 weeks (Q2W) from Week 4 until Week 14.

<b>Arm title</b>	Lebrikizumab Q2W
------------------	------------------

Arm description:

Induction Period (Baseline-Week 16):

500 milligram (mg) Lebrikizumab (2 x 250 mg) SC injections as a loading dose at Baseline and Week 2 visits followed by a single 250 mg Lebrikizumab injection Q2W from Week 4 until Week 14.

Arm type	Experimental
Investigational medicinal product name	Lebrikizumab
Investigational medicinal product code	LY3650150
Other name	
Pharmaceutical forms	Injection
Routes of administration	Subcutaneous use

Dosage and administration details:

500 milligram (mg) Lebrikizumab (2 x 250 mg) SC injections as a loading dose at Baseline and Week 2 visits followed by a single 250 mg Lebrikizumab injection Q2W from Week 4 until Week 14.

<b>Number of subjects in period 1</b>	Placebo	Lebrikizumab Q2W
Started	141	283
Received at Least One Dose of Study Drug	141	282
Completed	120	263
Not completed	21	20
Started systemic dexamethasone	1	-
Positive quantiferon test	-	1
Adverse event, non-fatal	1	2
Due to Epidemic/Pandemic	1	1
Withdrawal by Subject	6	4
Lost to follow-up	1	4
Lack of efficacy	6	2
Protocol deviation	5	6

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Induction Period (Baseline-Week 16): Two subcutaneous (SC) injections of Placebo as a loading dose at Baseline and Week 2 followed by a single injection every 2 weeks (Q2W) from Week 4 until Week 14.

Reporting group title	Lebrikizumab Q2W
-----------------------	------------------

Reporting group description:

Induction Period (Baseline-Week 16):

500 milligram (mg) Lebrikizumab (2 x 250 mg) SC injections as a loading dose at Baseline and Week 2 visits followed by a single 250 mg Lebrikizumab injection Q2W from Week 4 until Week 14.

Reporting group values	Placebo	Lebrikizumab Q2W	Total
Number of subjects	141	283	424
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0
Children (2-11 years)	0	0	0
Adolescents (12-17 years)	18	37	55
Adults (18-64 years)	113	225	338
From 65-84 years	10	19	29
85 years and over	0	2	2
Gender categorical Units: Subjects			
Female	73	141	214
Male	68	142	210
Race Units: Subjects			
American Indian or Alaska Native	0	7	7
Asian	31	39	70
Native Hawaiian or Other Pacific Islander	0	2	2
Black or African American	16	33	49
White	93	196	289
More than one race	1	4	5
Unknown or Not Reported	0	2	2
Region of Enrollment Units: Subjects			
Canada	7	16	23
South Korea	13	21	34
Lativa	6	5	11
United States	62	128	190
Poland	25	56	81
Australia	13	26	39

France	0	7	7
Lithuania	7	11	18
Spain	4	9	13
Estonia	4	4	8

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Induction Period (Baseline-Week 16): Two subcutaneous (SC) injections of Placebo as a loading dose at Baseline and Week 2 followed by a single injection every 2 weeks (Q2W) from Week 4 until Week 14.	
Reporting group title	Lebrikizumab Q2W
Reporting group description:	
Induction Period (Baseline-Week 16): 500 milligram (mg) Lebrikizumab (2 x 250 mg) SC injections as a loading dose at Baseline and Week 2 visits followed by a single 250 mg Lebrikizumab injection Q2W from Week 4 until Week 14.	

### Primary: Percentage of Participants With an Investigator Global Assessment (IGA) Score of 0 or 1 and a Reduction $\geq 2$ Points From Baseline to Week 16

End point title	Percentage of Participants With an Investigator Global Assessment (IGA) Score of 0 or 1 and a Reduction $\geq 2$ Points From Baseline to Week 16
End point description:	
The IGA measures the investigator's global assessment of the participant's overall severity of their Atopic Dermatitis (AD), based on a static, numeric 5-point scale from 0 (clear skin) to 4 (severe disease). The score is based on an overall assessment of the degree of erythema, papulation/induration, oozing/crusting, and lichenification.	
Analysis Population Description (APD): All randomized participants, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol. Markov Chain Monte Carlo Multiple Imputation (MCMC-MI) was used to handle missing data.	
End point type	Primary
End point timeframe:	
Baseline to Week 16	

End point values	Placebo	Lebrikizumab Q2W		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	141	283		
Units: Percentage of Participants				
number (confidence interval 95%)	12.8 (7.0 to 18.6)	43.0 (37.1 to 49.0)		

### Statistical analyses

Statistical analysis title	IGA Baseline to Week 16
Comparison groups	Placebo v Lebrikizumab Q2W

Number of subjects included in analysis	424
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.000001
Method	Cochran-Mantel-Haenszel
Parameter estimate	Risk difference (RD)
Point estimate	29.6
Confidence interval	
level	95 %
sides	2-sided
lower limit	21.4
upper limit	37.8

### Primary: Percentage of Participants Achieving Eczema Area And Severity Index (EASI-75) ( $\geq 75\%$ Reduction in EASI Score) From Baseline to Week 16

End point title	Percentage of Participants Achieving Eczema Area And Severity Index (EASI-75) ( $\geq 75\%$ Reduction in EASI Score) From Baseline to Week 16
-----------------	---

#### End point description:

The EASI assesses objective physician estimates of 2 dimensions of atopic dermatitis - disease extent, i.e., percentage of skin affected: 0 = 0%; 1 = 1-9%; 2 = 10-29%; 3 = 30-49%; 4 = 50-69%; 5 = 70-89%; 6 = 90-100% and the severity of 4 clinical signs: (1) erythema, (2) edema/papulation, (3) excoriation, and (4) lichenification each on a scale of 0 to 3 (0 = none, absent; 1 = mild; 2 = moderate; 3 = severe) at 4 body sites (head/neck, trunk, upper limbs, and lower limbs). Half scores are allowed between severities 1, 2, and 3. The final EASI score was obtained by weight-averaging these 4 scores and will range from 0 (none) to 72 (severe).

The EASI-75 responder is defined as a participant who achieves a  $\geq 75\%$  improvement from baseline in the EASI score.

APD: All randomized participants, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol. MCMC-MI was used to handle missing data.

## Secondary: Percent Change in Pruritus Numerical Rating Scale (NRS) Score From Baseline to Week 16

End point title	Percent Change in Pruritus Numerical Rating Scale (NRS) Score From Baseline to Week 16
-----------------	--

### End point description:

Pruritus NRS is an 11-point scale used by participants to rate their worst itch severity over the past 24 hours with 0 indicating "No itch" and 10 indicating "Worst itch imaginable." Least Squares (LS) Mean was calculated using analysis of covariance (ANCOVA) model with treatment and randomization strata (region, disease severity, age) as fixed factors and baseline value as covariate.

APD: All randomized participants, with a Baseline Pruritus NRS score >0, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol. MCMC-MI was used to handle missing data.

## Secondary: Change From Baseline in Percent Body Surface Area (BSA) at Week 16

End point title	Change From Baseline in Percent Body Surface Area (BSA) at Week 16
-----------------	--

### End point description:

The BSA affected by AD will be assessed for 4 separate body regions: head and neck, trunk (including genital region), upper extremities, and lower extremities (including the buttocks). Each body region will be assessed for disease extent ranging from 0% to 100% involvement. BSA was calculated using the participant's palm using the 1% rule, 1 palm was equivalent to 1% with estimates of the number of palms it takes to cover the affected AD area. Maximum number of palms were 10 palms for head and neck (10%), 20 palms for upper extremities (20%), 30 palms for trunk, including axilla and groin (30%), 40 palms for lower extremities, including buttocks (40%). Percent of BSA for a body region was calculated as = total number of palms in a body region \* % surface area equivalent to 1 palm. Overall percent BSA of all 4 body regions ranges from 0% to 100 % with higher values representing greater severity of AD.

MMRM was used to handle all missing data.

End point type	Secondary
----------------	-----------

### End point timeframe:

Baseline, Week 16

APD: All randomized participants, with observed BSA data, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol.

End point values	Placebo	Lebrikizumab Q2W		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	77	236		
Units: percentage of body surface area				
least squares mean (standard error)	-11.77 (± 1.856)	-30.23 (± 1.310)		

## Statistical analyses

### Secondary: Percentage of Participants Achieving EASI-90 From Baseline to Week 4

End point title	Percentage of Participants Achieving EASI-90 From Baseline to Week 4
-----------------	--

#### End point description:

The EASI assesses objective physician estimates of 2 dimensions of atopic dermatitis - disease extent, i.e., percentage of skin affected: 0 = 0%; 1 = 1-9%; 2 = 10-29%; 3 = 30-49%; 4 = 50-69%; 5 = 70-89%; 6 = 90-100% and the severity of 4 clinical signs: (1) erythema, (2) edema/papulation, (3) excoriation, and (4) lichenification each on a scale of 0 to 3 (0 = none, absent; 1 = mild; 2 = moderate; 3 = severe) at 4 body sites (head/neck, trunk, upper limbs, and lower limbs). Half scores are allowed between severities 1, 2, and 3. The final EASI score was obtained by weight-averaging these 4 scores and will range from 0 (none) to 72 (severe).

The EASI-90 responder is defined as a participant who achieves a  $\geq 90\%$  improvement from baseline in the EASI score.

APD: All randomized participants, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol. MCMC-MI was used to handle missing data.

## Secondary: Change From Baseline in Dermatology Life Quality Index (DLQI) at Week 16

End point title	Change From Baseline in Dermatology Life Quality Index (DLQI) at Week 16
-----------------	--

### End point description:

The DLQI is a 10-item, validated questionnaire used to assess the impact of skin disease on the quality of life of an affected person. The 10 questions cover the following topics: symptoms, embarrassment, shopping and home care, clothes, social and leisure, sport, work or study, close relationships, sex, and treatment, over the previous week. Response categories include "Not at all," "A little," "A lot," and "Very much," with corresponding scores of 0, 1, 2, and 3 respectively. Questions 3-10 also have an additional response category of "Not relevant" which is scored as "0". Questions are scored from 0 to 3, giving a possible total score range from 0 (no impact of skin disease on quality of life) to 30 (maximum impact on quality of life). A high score is indicative of a poor quality of life.

LS Mean was calculated using the ANCOVA model with treatment, baseline value, and stratification factors of geographic region, age group, baseline IGA (3 versus 4) score as fixed factors.

End point type	Secondary

## Secondary: Percent Change in SCORing Atopic Dermatitis (SCORAD) From Baseline to Week 16

End point title	Percent Change in SCORing Atopic Dermatitis (SCORAD) From Baseline to Week 16
-----------------	---

### End point description:

The SCORAD index uses the rule of nines to assess disease extent and evaluates 6 clinical characteristics to determine disease severity: (1) erythema, (2) edema/papulation, (3) oozing/crusts, (4) excoriation, (5) lichenification, and (6) dryness on a scale of 0 to 3 (0=absence, 1=mild, 2=moderate, 3=severe). The SCORAD index also assesses subjective symptoms of pruritus and sleep loss with VAS where 0 is no itching or no trouble sleeping and 10 is unbearable itching or a lot of trouble sleeping. These 3 aspects: extent of disease (A: 0-1-2), disease severity (B: 0-18), & subjective symptoms (C: 0-20) combine using  $A/5 + 7*B/2 + C$  to give a maximum possible score of 103, where 0 = no disease and 103 = severe disease.

LS Mean was calculated using the ANCOVA model with treatment group and stratification factors of geographic region, age group, baseline IGA (3 versus 4) score as fixed factors and baseline value as covariate. Missing Values were imputed using LOCF method.

End point type	Secondary
----------------	-----------

### End point timeframe:

Baseline, Week 16

### Secondary: Change From Baseline in European Quality of Life-5 Dimensions-5 Levels (EQ-5D-5L) at Week 16 - Health State Index

End point title	Change From Baseline in European Quality of Life-5 Dimensions-5 Levels (EQ-5D-5L) at Week 16 - Health State Index
-----------------	---

#### End point description:

The EQ-5D-5L is a 2-part measurement. The first part is comprised of the following 5 participant-reported dimensions: mobility, self-care, usual activities, pain/discomfort, and anxiety/depression. Each dimension has 5 levels: no problems, slight problems, moderate problems, severe problems, and extreme problems. The responses are used to derive the health state index scores using the United Kingdom (UK) algorithm, with scores ranging from -0.594 to 1, and the United States (US) algorithm, with scores ranging from -0.109 to 1, with higher score indicating better health state. LS Mean was calculated using the ANCOVA model with treatment and stratification factors of geographic region, age group, baseline IGA (3 versus 4) score as fixed factors and baseline value as covariate. Missing Values were imputed using last observation carried forward (LOCF) method.

End point type	Secondary

## Secondary: Change From Baseline in EQ-5D-5L at Week 16 - Visual Analog Scale (VAS)

End point title	Change From Baseline in EQ-5D-5L at Week 16 - Visual Analog Scale (VAS)
-----------------	---

### End point description:

The EQ-5D-5L is a 2-part measurement. The second part is assessed using a VAS that ranged from 0 to 100 millimeter (mm), where 0 is the worst health you can imagine and 100 is the best health you can imagine. LS Mean was calculated using the ANCOVA model with treatment and stratification factors of geographic region, age group, baseline IGA (3 versus 4) score as fixed factors and baseline value as covariate.

APD: All randomized participants, with non-missing EQ-5D-5L data at baseline, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol. Missing values were imputed using LOCF method.

End point type	Secondary

### Secondary: Change From Baseline in Patient Oriented Eczema Measure (POEM) at Week 16

End point title	Change From Baseline in Patient Oriented Eczema Measure (POEM) at Week 16
-----------------	---

End point description:

POEM is a 7-item, validated, questionnaire used by the participant to assess disease symptoms over the last week. The participant is asked to respond to 7 questions on skin dryness, itching, flaking, cracking, sleep loss, bleeding and weeping. All 7 answers carry equal weight with a total possible score from 0 to 28 (answers scored as: No days=0; 1# 2 days = 1; 3-4 days = 2; 5#6 days = 3; everyday = 4). A high score is indicative of a poor quality of life. POEM responses will be captured using an electronic diary and transferred into the clinical database. LS Mean was calculated using MMRM model using treatment, baseline value, visit, the interaction of the baseline value-by-visit, the interaction of treatment by-visit as covariates, geographic region, age group, baseline IGA (3 versus 4) score as fixed. MMRM was used to handle all missing data

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 16

APD: All randomized participants, with observed POEM data, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol.

## Secondary: Change From Baseline in Asthma Control Questionnaire (ACQ-5) Score at Week 16 in Participants Who Have Self-Reported Comorbid Asthma

End point title	Change From Baseline in Asthma Control Questionnaire (ACQ-5) Score at Week 16 in Participants Who Have Self-Reported Comorbid Asthma
-----------------	--

### End point description:

The ACQ-5 is a five-item, self-completed questionnaire, which is used as a measure of asthma control of a participant. The five questions (concerning nocturnal awakening, waking in the morning, activity limitation, shortness of breath and wheeze) enquire about the frequency and/or severity of symptoms over the previous week. The response options for all these questions range from zero (no impairment/limitation) to six (total impairment/ limitation) scale. The ACQ-5 score is the average of the individual item scores and ranges from 0 (totally controlled) to 6 (severely uncontrolled). Higher scores indicate lower asthma control.

LS Mean was calculated using ANCOVA with treatment, geographic region, age group, baseline IGA (3 versus 4) score as fixed factors and baseline value as covariate.

APD: All randomized participants, with non-missing baseline ACQ-5 score, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not f

## Secondary: Change From Baseline in Children's Dermatology Life Quality Index (CDLQI) at Week 16 - Adolescents

End point title	Change From Baseline in Children's Dermatology Life Quality Index (CDLQI) at Week 16 - Adolescents
-----------------	--

### End point description:

The CDLQI questionnaire is designed for use in children (4 to 16 years of age). It consists of 10 items that are grouped into 6 domains: symptoms & feelings, leisure, school or holidays, personal relationships, sleep, & treatment. The scoring of each question is: Very much = 3; Quite a lot = 2; Only a little = 1; Not at all = 0. CDLQI total score is calculated by summing all 10 items responses, and has a range of 0 to 30 (higher scores are indicative of greater impairment).

LS Mean was calculated using MMRM model which includes treatment, baseline value, visit, the interaction of the baseline value-by-visit as covariates, the interaction of treatment by-visit, geographic region, age group, and baseline IGA (3 versus 4) score as fixed factors.

MMRM was used to handle all missing data.

End point type	Secondary
----------------	-----------

### End point timeframe:

Baseline, Week 16

APD: All randomized, adolescent participants, with non-missing baseline CDLQI score, even if the participant does not take the assigned treatment, does not receive the correct treatment, or otherwise does not follow the protocol.
