Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial is to evaluate tolerability, feasibility of pevonedistat, to define and describe toxicities, and to characterize the pharmacokinetics (PK) of pevonedistat.

Protection of trial subjects:

All the participants or parents or patient's guardian were required to read and sign the informed consent form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 May 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Subject disposition

Recruitment

Recruitment details:

Participants took part in the study at approximately 19 investigative sites in the United States of America from 16 May 2019 up to 22 September 2020.

Pre-assignment

Screening details:

Pediatric participants diagnosed with relapsed or refractory acute myeloid leukemia or myelodysplastic syndrome were enrolled in the single group to receive pevonedistat 20 mg/m² in combination with other chemotherapeutic agents.

Period 1

Period 1 title	Overall Study (overall period)

Dose-limiting hematological and non-hematological toxicities were defined differently. All Grade 3 or greater non-hematological toxicity not clearly related to the underlying disease and attributable to protocol therapy will be considered a DLT. Hematological DLT attributable to protocol therapy was defined as failure to recover to a peripheral absolute neutrophil count (ANC) > 500 per meter cube (/m³) and platelets > 20,000 per millimeter square (/mm²) by 50 days from the start of fludarabine and cytarabine administration, not due to presence of leukemia or severe infection.
