

## Clinical trial results:

### A Phase 3, Double-Blind, Randomized, Placebo-Controlled, Parallel-Group, Flexible-Dose, 27-Week Trial to Evaluate the Efficacy, Safety, and Tolerability of Tavapadon as Adjunctive Therapy for Parkinson's Disease in Levodopa-Treated Adults With Motor Fluctuations (TEMPO-3 Trial)

#### Summary

EudraCT number	2019-002951-40
Trial protocol	DE CZ ES FR HU BG IT
Global end of trial date	15 February 2024

#### Results information

Result version number	v1 (current)
This version publication date	23 February 2025
First version publication date	23 February 2025

#### Trial information

##### Trial identification

Sponsor protocol code	CVL-751-PD-003
-----------------------	----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	-
WHO universal trial number (UTN)	-
Other trial identifiers	IND number: 118,647

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	15 February 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	15 February 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The purpose of this study is to assess the effect of tavapadon on the change from baseline in total daily hours of "on" time without troublesome dyskinesia in L-Dopa-treated participants with Parkinson's Disease (PD) who are experiencing motor fluctuations.

Protection of trial subjects:

The investigator or his/her representative explained the nature of the trial to the participant or his/her legally authorized representative and answered all questions regarding the trial. Participants were informed that their participation was voluntary. Participants were required to sign a statement of informed consent that met the requirements of 21 CFR 50, local regulations, ICH guidelines, HIPAA requirements, where applicable, and the IRB/IEC or trial center. A copy of the ICF was provided to the participant or the participant's legally authorized representative.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 September 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Australia: 27
Country: Number of subjects enrolled	Canada: 4
Country: Number of subjects enrolled	Israel: 11
Country: Number of subjects enrolled	Serbia: 15
Country: Number of subjects enrolled	Ukraine: 46
Country: Number of subjects enrolled	United States: 139
Country: Number of subjects enrolled	Poland: 104
Country: Number of subjects enrolled	Spain: 20
Country: Number of subjects enrolled	Bulgaria: 39
Country: Number of subjects enrolled	Czechia: 24
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 49
Country: Number of subjects enrolled	Hungary: 3
Country: Number of subjects enrolled	Italy: 22
Worldwide total number of subjects	507
EEA total number of subjects	265

Notes:

<b>Subjects enrolled per age group</b>	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	223
From 65 to 84 years	284
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

In this Phase 3, Double-Blind study, a total of 507 subjects with Parkinson's Disease(PD) were randomized in a 1:1 ratio to receive Tavapadon (5 mg to 15 mg) or Placebo once daily (QD) for 27 Weeks.

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst

Blinding implementation details:

Treatment assignments were blinded to the investigators and other trial site personnel, the subjects, and all sponsor personnel who are involved in the conduct of the trial (including trial monitoring, data management, and data analysis). Access to the treatment codes were restricted to personnel who are responsible for generating and maintaining the randomization code, packaging the IMPs, operating the IVRS/IWRS, analyzing the PK blood samples, or reporting SAEs or AESI to regulatory agency.

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Placebo

Arm description:

Participants will receive placebo matching to tavapadon tablet QD orally for 27 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants will receive placebo matching to tavapadon QD orally for 27 weeks.

<b>Arm title</b>	Tavapadon
------------------	-----------

Arm description:

Participants will be randomized to receive tavapadon 5 to 15 mg tablet QD orally for 27 weeks.

Arm type	Experimental
Investigational medicinal product name	Tavapadon
Investigational medicinal product code	
Other name	PF-06649751, CVL-751
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants will be randomized to receive tavapadon 5 to 15 mg tablet QD orally for 27 weeks.

<b>Number of subjects in period 1</b>	Placebo	Tavapadon
Started	255	252
Completed	206	159
Not completed	49	93
Treatment with Prohibited Concomitant Medications	1	-
Consent withdrawn by subject	12	33
Physician decision	-	1
Non- Compliance with Study Drug	-	2
Failure to Meet Continuation Criteria	-	1
Adverse event, non-fatal	23	43
Not specified	2	2
Site Terminated by Sponsor	3	5
Lost to follow-up	3	4
Lack of efficacy	5	2

## Baseline characteristics

### Reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants will receive placebo matching to tavapadon tablet QD orally for 27 weeks.	
Reporting group title	Tavapadon
Reporting group description:	
Participants will be randomized to receive tavapadon 5 to 15 mg tablet QD orally for 27 weeks.	

Reporting group values	Placebo	Tavapadon	Total
Number of subjects	255	252	507
Age categorical			
Units: Subjects			

Age continuous			
Units: years			
arithmetic mean	64.1	65.6	-
standard deviation	± 8.52	± 8.42	-
Gender categorical			
Units: Subjects			
Female	85	101	186
Male	170	151	321
ON Time (hours) Without Troublesome Dyskinesia at Baseline			
Units: hours			
arithmetic mean	10.148	9.884	-
standard deviation	± 2.637	± 2.569	-
OFF Time (hours) at Baseline			
Units: hours			
arithmetic mean	5.408	5.638	-
standard deviation	± 2.484	± 2.246	-
MDS-UPDRS Score at Baseline (Part I)			
The MDS-UPDRS is a multidimensional scale that assesses the motor and non-motor impacts of PD across 4 parts. Each item of all the parts will be rated on a scale from 0 to 4 on which 0 = normal, 1=slight, 2=mild, 3=moderate, and 4=severe.			
Units: units on a scale			
arithmetic mean	7.5	8.0	-
standard deviation	± 4.93	± 5.13	-
MDS-UPDRS Score at Baseline (Part II)			
The MDS-UPDRS is a multidimensional scale that assesses the motor and non-motor impacts of PD across 4 parts. Each item of all the parts will be rated on a scale from 0 to 4 on which 0 = normal, 1=slight, 2=mild, 3=moderate, and 4=severe.			
Units: units on a scale			
arithmetic mean	12.5	13.3	-
standard deviation	± 7.05	± 6.54	-
MDS-UPDRS Score at Baseline (Part III)			
The MDS-UPDRS is a multidimensional scale that assesses the motor and non-motor impacts of PD across 4 parts. Each item of all the parts will be rated on a scale from 0 to 4 on which 0 = normal, 1=slight, 2=mild, 3=moderate, and 4=severe.			
Units: units on a scale			

arithmetic mean	32.4	32.6	
standard deviation	± 14.26	± 14.34	-

## End points

### End points reporting groups

Reporting group title	Placebo
Reporting group description:	
Participants will receive placebo matching to tavapadon tablet QD orally for 27 weeks.	
Reporting group title	Tavapadon
Reporting group description:	
Participants will be randomized to receive tavapadon 5 to 15 mg tablet QD orally for 27 weeks.	

### Primary: Change From Baseline in the Total "On" Time Without Troublesome Dyskinesia Based on the 2-day Average of the Self-completed Home Diary for Motor Function Status (Hauser Diary)

End point title	Change From Baseline in the Total "On" Time Without Troublesome Dyskinesia Based on the 2-day Average of the Self-completed Home Diary for Motor Function Status (Hauser Diary)
End point description:	
The Hauser diary assesses participant-defined clinical status over a period of time and provides a tool for assessment of the change in "off" time and "on" time with troublesome dyskinesia (which is a more accurate reflection of clinical response than "off" time alone). The Hauser diary asks participants to rate their mobility for each 30-minute period and to record their status for the majority of the period in 1 of 5 categories as: "on" time without dyskinesia, "on" time with nontroublesome dyskinesia, "on" time with troublesome dyskinesia, "off" time, or asleep. The total "on" time without troublesome dyskinesia will be assessed and reported at endpoint.	
End point type	Primary
End point timeframe:	
Week 26	

End point values	Placebo	Tavapadon		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	201	153		
Units: Hours				
least squares mean (standard error)	0.619 ( $\pm$ 0.188)	1.721 ( $\pm$ 0.207)		

### Statistical analyses

Comparison groups	Placebo v Tavapadon
Number of subjects included in analysis	487
Analysis specification	Pre-specified
Analysis type	superiority
P-value	< 0.0001 <sup>[16]</sup>
Method	Mixed-effect Model Repeated Measurement
Parameter estimate	LS Mean of Difference
Point estimate	-1.024
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.528
upper limit	-0.52
Variability estimate	Standard error of the mean
Dispersion value	0.256

Notes:

[16] - LS Means, SE, difference from placebo, and confidence intervals are estimated using a mixed effects repeated measures model with fixed effects for treatment group, visits, and treatment by visit interaction and baseline as a covariate.

<b>Statistical analysis title</b>	Week 22: Placebo, Tavapadon

## Statistical analyses

<b>Statistical analysis title</b>	Part I: Placebo, Tavapadon
Comparison groups	Placebo v Tavapadon
Number of subjects included in analysis	487
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.3265 <sup>[19]</sup>
Method	Mixed-effect Model Repeated Measurement
Parameter estimate	LS Mean of Difference
Point estimate	0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-0.4
upper limit	1.2
Variability estimate	Standard error of the mean
Dispersion value	0.4

Notes:

[19] - LS Means, SE, difference from placebo, and confidence intervals are estimated using a mixed effects repeated measures model with fixed effects for treatment group, visits, and treatment by visit interaction and baseline as a covariate.

<b>Statistical analysis title</b>	Part II: Placebo, Tavapadon
Comparison groups	Placebo v Tavapadon
Number of subjects included in analysis	487
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0203 <sup>[20]</sup>
Method	Mixed-effect Model Repeated Measurement
Parameter estimate	LS Mean of Difference
Point estimate	-1.2
Confidence interval	
level	95 %
sides	2-sided
lower limit	-2.2
upper limit	-0.2

Variability estimate	Standard error of the mean
Dispersion value	0.52

Notes:

[20] - LS Means, SE, difference from placebo, and confidence intervals are estimated using a mixed effects repeated measures model with fixed effects for treatment group, visits, and treatment by visit interaction and baseline as a covariate.

<b>Statistical analysis title</b>	Part III: Placebo, Tavapadon
Comparison groups	Tavapadon v Placebo
Number of subjects included in analysis	487
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.0118 <sup>[21]</sup>
Method	Mixed-effect Model Repeated Measurement
Parameter estimate	LS Mean of Difference
Point estimate	-2.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-4.3
upper limit	-0.5
Variability estimate	Standard error of the mean
Dispersion value	0.96

Notes:

[21] - LS Means, SE, difference from placebo, and confidence intervals are estimated using a mixed effects repeated measures model with fixed effects for treatment group, visits, and treatment by visit interaction and baseline as a covariate.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All-cause mortality were reported from enrollment to the end of study, median time on follow up (median time subjects were followed) was 190 and 189 days for Placebo and Tavapadon, respectively.

Adverse event reporting additional description:

Treatment-emergent adverse events and serious adverse events were collected from first dose of study drug until 4 weeks after the last dose of study drug; mean duration on study drug was 169.6 and 151.7 days for Placebo and Tavapadon, respectively.

Assessment type	Systematic

Dictionary version	26.1
--------------------	------

### Reporting groups

Reporting group title	Placebo
-----------------------	---------

Reporting group description:

Participants will receive placebo matching to tavapadon tablet QD orally for 27 weeks.

Reporting group title	Tavapadon
-----------------------	-----------

Reporting group description:

Participants will be randomized to receive tavapadon 5 to 15 mg tablet QD orally for 27 weeks.

Serious adverse events	Placebo	Tavapadon
