

## Clinical trial results:

### A Phase I/II, Open-Label, Multicenter Study to Evaluate the Safety, Tolerability, Pharmacokinetics and Anti-Tumor Activity of YH25448 in Patients with EGFR Mutation Positive Advanced Non-Small Cell Lung Cancer (NSCLC)

#### Summary

EudraCT number	2019-003106-28
Trial protocol	GB ES
Global end of trial date	14 November 2022

#### Results information

Result version number	v1 (current)
This version publication date	26 November 2023
First version publication date	26 November 2023

#### Trial information

##### Trial identification

Sponsor protocol code	73841937NSC2001
-----------------------	-----------------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04075396
WHO universal trial number (UTN)	-

Notes:

#### Sponsors

Sponsor organisation name	Janssen Research & Development, LLC
Sponsor organisation address	920 Route 202, South Raritan, New Jersey, United States, 08869

Scientific contact	Clinical Registry Group, Janssen Research & Development, LLC, ClinicalTrialsEU@its.jnj.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	14 November 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	14 November 2022
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The main objective of this trial was to evaluate the safety, tolerability, and pharmacokinetics (PK) of YH25448 when given orally to subjects with epidermal growth factor receptor single activating mutation positive (EGFRm+) locally advanced or metastatic non-small cell lung cancer (NSCLC).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practices and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	06 November 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 18
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	United States: 9
Worldwide total number of subjects	28
EEA total number of subjects	18

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	16
From 65 to 84 years	12

85 years and over	0
-------------------	---

## Subject disposition

### Recruitment

Recruitment details: -

### Pre-assignment

Screening details:

A total of 29 subjects from outside Korea were enrolled in the study, out of which 28 subjects received study treatment and none completed the study.

### Period 1

Period 1 title	Overall Period (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Lazertinib 240 mg

Arm description:

Subjects with epidermal growth factor receptor single activating mutation positive (EGFRm+) advanced non-small cell lung cancer (NSCLC) with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 240 milligrams (mg) orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 32.7 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.

Arm type	Experimental
Investigational medicinal product name	Lazertinib
Investigational medicinal product code	
Other name	YH25448
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received lazertinib 240 mg tablet once daily.

<b>Arm title</b>	Lazertinib 320 mg
------------------	-------------------

Arm description:

Subjects with EGFRm+ advanced NSCLC with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 320 mg orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 8.3 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.

Arm type	Experimental
Investigational medicinal product name	Lazertinib
Investigational medicinal product code	
Other name	YH25448
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received lazertinib 320 mg tablet once daily.

<b>Number of subjects in period 1</b>	Lazertinib 240 mg	Lazertinib 320 mg
Started	15	13
Completed	0	0
Not completed	15	13
Adverse event, serious fatal	11	9
Consent withdrawn by subject	1	2
Protocol v 11.0 implementation	3	2

## Baseline characteristics

### Reporting groups

Reporting group title	Lazertinib 240 mg
-----------------------	-------------------

Reporting group description:

Subjects with epidermal growth factor receptor single activating mutation positive (EGFRm+) advanced non-small cell lung cancer (NSCLC) with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 240 milligrams (mg) orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 32.7 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.

Reporting group title	Lazertinib 320 mg
-----------------------	-------------------

Reporting group description:

Subjects with EGFRm+ advanced NSCLC with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 320 mg orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 8.3 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.

## End points

### End points reporting groups

Reporting group title	Lazertinib 240 mg
Reporting group description:	
Subjects with epidermal growth factor receptor single activating mutation positive (EGFRm+) advanced non-small cell lung cancer (NSCLC) with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 240 milligrams (mg) orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 32.7 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.	
Reporting group title	Lazertinib 320 mg
Reporting group description:	
Subjects with EGFRm+ advanced NSCLC with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 320 mg orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 8.3 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.	

### Primary: Part D: Number of Subjects With Treatment-emergent Adverse Events (TEAEs)

End point title	Part D: Number of Subjects With Treatment-emergent Adverse Events (TEAEs) <sup>[1]</sup>
End point description:	
An adverse event (AE) is any untoward medical occurrence in a clinical study subject administered a medicinal (investigational or non-investigational) product. An AE does not necessarily have a causal relationship with the intervention. TEAEs were defined as AEs that started on or after the first dose of study medication and prior to 28-day follow-up period. All TEAEs including serious and non-serious events are reported in this endpoint. The safety analysis population included all subjects who received at least 1 dose of investigational product (IP).	
End point type	Primary
End point timeframe:	
From Day 1 up to 32.7 months	
Notes:	
[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.	
Justification: Only descriptive data was planned to be analyzed for this endpoint.	

End point values	Lazertinib 240 mg	Lazertinib 320 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	13		
Units: Subjects	15	13		

### Statistical analyses

No statistical analyses for this end point

### Primary: Part D: Number of Subjects With Clinically Significant Abnormalities in Vital Signs

End point title	Part D: Number of Subjects With Clinically Significant Abnormalities in Vital Signs <sup>[2]</sup>
-----------------	--

**End point description:**

Number of subjects with clinically significant abnormalities in vital signs were reported. Vital signs included pulse rate, systolic blood pressure, diastolic blood pressure, body temperature, height, weight, and body mass index (BMI). Baseline was defined as last non-missing measurement taken prior to reference start date. The safety analysis population included all subjects who received at least 1 dose of IP.

End point type	Primary
----------------	---------

**End point timeframe:**

Baseline up to 32.7 months

**Notes:**

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be analyzed for this endpoint.

End point values	Lazertinib 240 mg	Lazertinib 320 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	13		
Units: Subjects	0	0		

**Statistical analyses**

No statistical analyses for this end point

**Primary: Part D: Number of Subjects With Clinically Significant Abnormalities in Physical Examination**

End point title	Part D: Number of Subjects With Clinically Significant Abnormalities in Physical Examination <sup>[3]</sup>
-----------------	---

**End point description:**

Number of subjects with clinically significant abnormalities in physical examination was reported. Physical examination included general appearance, skin, head and neck (including ears, eyes, nose and throat), respiratory, cardiovascular, abdomen, lymph nodes, thyroid, muscular-skeletal (including spine and extremities) and neurological systems. Baseline was defined as last non-missing measurement taken prior to reference start date. Safety analysis population: all subjects who received at least 1 dose of IP.

End point type	Primary
----------------	---------

**End point timeframe:**

Baseline up to 32.7 months

**Notes:**

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: Only descriptive data was planned to be analyzed for this endpoint.

End point values	Lazertinib 240 mg	Lazertinib 320 mg		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	15	13		
Units: Subjects	11	5		

**Statistical analyses**

**Primary: Part D: Number of Subjects With Greater Than or Equal to ( $\geq$ ) Grade 4 Toxicity in Laboratory Tests Based on National Cancer Institute Common Toxicity Criteria for Adverse Events (NCI-CTCAE) Version 4.03**

End point title	Part D: Number of Subjects With Greater Than or Equal to ( $\geq$ ) Grade 4 Toxicity in Laboratory Tests Based on National Cancer Institute Common Toxicity Criteria for Adverse Events (NCI-CTCAE) Version 4.03 <sup>[4]</sup>
-----------------	---

## End point description:

Number of subjects with  $\geq$  Grade 4 toxicity in laboratory tests based on NCI-CTCAE version 4.03 were reported. Safety laboratory assessments included clinical chemistry, hematology and urinalysis. As per NCI-CTCAE version 4.03: Grade 1 = mild; Grade 2 = moderate; Grade 3 = severe; Grade 4 = life-threatening; Grade 5 = death. Baseline was defined as last non-missing measurement taken prior to reference start date. The safety analysis population included all subjects who received at least 1 dose of IP.

End point type	Primary
----------------	---------

## End point timeframe:

Baseline up to 32.7 months

## Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

**Secondary: Disease Control Rate (DCR)**

---

End point title	Disease Control Rate (DCR)
-----------------	----------------------------

---

End point description:

DCR: percentage of subjects with a best overall response (BOR), extracranial and intracranial response of CR, PR or stable disease (SD). As per RECIST version 1.1 CR: disappearance of target and non-target lesions and normalization of tumour markers. Pathological lymph nodes must have short axis measures <10mm. PR:  $\geq 30\%$  decrease in sum of measures (longest diameter for tumour lesions and short axis measure for nodes) of target lesions, taking as reference baseline sum of diameters. Non-target lesions must be non-PD. PD:  $\geq 20\%$  increase in sum of diameters of target lesions, taking as reference the smallest sum on study. In addition to relative 20% increase, sum must also demonstrate  $\geq 5\text{mm}$  absolute increase. Appearance of one/more new lesions was considered progression. SD: neither sufficient shrinkage to qualify for PR nor sufficient increase to qualify for PD. Evaluable for response population: all subjects in safety analysis population who had baseline RECIST version 1.1 assessment.

## Secondary: Percentage Change from Baseline in Tumour Size

End point title	Percentage Change from Baseline in Tumour Size
-----------------	--

End point description:

Tumour size was defined as the sum lengths of the longest diameters of the target lesion. Percentage change in tumour size was determined for subjects with measurable disease at baseline. Baseline for RECIST was defined as the last evaluable assessment prior to starting treatment. Evaluable for response population: all subjects in safety analysis population who had a baseline RECIST version 1.1 assessment. Here 'N' (number of subjects analysed) refers to the number of subjects evaluable for this endpoint.

## Secondary: Progression Free Survival (PFS)

End point title	Progression Free Survival (PFS)
-----------------	---------------------------------

End point description:

PFS was defined as the time from the date of first dose of study drug to the earliest date of disease progression per RECIST version 1.1, or death due to any cause, whichever occurs first. PD = at least a 20% increase in the sum of diameters of measured lesions taking as references the smallest sum of diameters recorded on study (including baseline) and an absolute increase of  $\geq 5$  mm or appearance of at least 1 new lesion. The safety analysis population included all subjects who received at least 1 dose of IP. Here 'N' (number of subjects analysed) refers to the number of subjects evaluable for this endpoint.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All cause mortality: Day 1 up to 33.7 months; Serious and other adverse events: Day 1 up to 32.7 months

Adverse event reporting additional description:

The safety analysis population included all subjects who received at least 1 dose of investigational product (IP).

Assessment type	Non-systematic

### Reporting groups

Reporting group title	Lazertinib 320 mg
-----------------------	-------------------

Reporting group description:

Subjects with EGFRm+ advanced NSCLC with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 320 mg orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 8.3 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment

Reporting group title	Lazertinib 240 mg
-----------------------	-------------------

Reporting group description:

Subjects with epidermal growth factor receptor single activating mutation positive (EGFRm+) advanced non-small cell lung cancer (NSCLC) with or without asymptomatic brain metastasis received lazertinib tablet at a dose of 240 milligrams (mg) orally on Day 1 of Cycle 0, which spans 7 days, followed by a once daily dose in each subsequent 21-day treatment cycle, for a maximum duration of up to 32.7 months. Subjects were then followed up for safety for 28 days after the last dose of study treatment.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 July 2019	The overall reason for this amendment was to change the standard for causality assessment, time schedule for vital sign and electrocardiogram (ECG) assessment for Part D, and reflect other changes to unify protocol for Korea and outside Korea. Sponsor name for Part D was changed from Yuhan to Janssen.
13 April 2021	The overall reason for amendment was to re-insert safety assessments for Part D after primary database lock (DBL) (19 Apr 2021) to allow protocol consistency across part D countries following a request from the Medicines and Healthcare Products Regulatory Agency (MHRA).
19 November 2021	The overall reason for this amendment was to removed requirement for long-term follow-up of subjects in Part D.

Notes:

---

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study Parts A, B, and C were sponsored by Yuhan Corporation under protocol identifier (ID) YH25448-201 and Part D was sponsored by Janssen Research and Development, LLC under protocol ID 73841937NSC2001. Therefore, only Part D results are reported.
