

## Clinical trial results:

### The GOING Study: Regorafenib followed by nivolumab in patients with Hepatocellular Carcinoma progressing under sorafenib or after discontinuation of atezolizumab plus bevacizumab

#### Summary

EudraCT number	2019-003108-10
Trial protocol	ES
Global end of trial date	09 July 2024

#### Results information

Result version number	v1 (current)
This version publication date	25 July 2025
First version publication date	25 July 2025

#### Trial information

##### Trial identification

Sponsor protocol code	GOING
-----------------------	-------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04170556
WHO universal trial number (UTN)	-

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	27 April 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	09 July 2024
Global end of trial reached?	Yes
Global end of trial date	09 July 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

To evaluate the safety of regorafenib in combination with Nivolumab.

Protection of trial subjects:

All patients including in Safety set signed informed consent and meet the selection criteria. To ensure patient safety, the following procedures were performed at all study visits during treatment: Physical examination, ECOG performance status, ECG, Vital signs, Assessment of AEs/SAEs, Concomitant medications, Serum chemistry, Hematology, Coagulation and Urinalysis.

Subject protection was ensured by following high medical and ethical standards in accordance with the principles laid down in the Declaration of Helsinki, and that are consistent with Good Clinical Practice and applicable regulations.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	20 January 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 67
Worldwide total number of subjects	67
EEA total number of subjects	67

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	32
From 65 to 84 years	35

85 years and over	0
-------------------	---

## Subject disposition

### Recruitment

Recruitment details:

The screened patients were 85 and 16 of them were screening failure. Two additional patients who signed the informed consent form did not start study treatment. Finally 67 patients received study treatment, 53 in cohort A (previous sorafenib) and 14 in cohort B (previous atezolizumab+bevacizumab).

### Pre-assignment

Screening details: -

### Pre-assignment period milestones

Number of subjects started	67
Number of subjects completed	67

### Period 1

Period 1 title	Overall (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Arm title	Experimental
-----------	--------------

Arm description:

Regorafenib + Nivolumab

Arm type	Experimental
Investigational medicinal product name	Regorafenib
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Coated tablet
Routes of administration	Oral use

Dosage and administration details:

Regorafenib was initiated at full dose (160 mg/day; 3 weeks on and 1 week off) in monotherapy for the first 8 weeks and the dose was modified upon development of adverse events according to the manufacturer's recommendations. After week 8, regorafenib was continued in combination with nivolumab, until symptomatic tumor progression, unacceptable adverse events, patient decision or death. Further regorafenib dose modifications were allowed in the combination phase, according to the development of adverse events.

Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Concentrate for solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab started in combination with regorafenib after 8 weeks of regorafenib monotherapy. Nivolumab (30-minutes IV infusion every 2 weeks) was administered in the first 5 enrolled patients at the dose of 3 mg/kg to define the tolerance and, if no severe adverse event was reported, the following 5 patients received 3 mg/Kg. If no severe adverse event was reported, the following patients received 240 mg/infusion. Treatment continued until symptomatic tumor progression, unacceptable adverse events, patient decision or death. The dose of nivolumab was not modified during the treatment of each patient.
