

## Clinical trial results:

### A Randomized, Double-blind, Parallel-group Trial to Investigate the Safety and Efficacy of GWP42003-P Versus Placebo as Adjunctive Therapy in Participants with Schizophrenia Experiencing Inadequate Response to Ongoing Antipsychotic Treatment

#### Summary

EudraCT number	2019-003369-16
Trial protocol	ES PL
Global end of trial date	16 March 2022

#### Results information

Result version number	v2 (current)
This version publication date	09 July 2023
First version publication date	01 April 2023
Version creation reason	<ul style="list-style-type: none"><li>New data added to full data set</li></ul> New data were included in the Adverse Event section

#### Trial information

##### Trial identification

Sponsor protocol code	GWAP19030
-----------------------	-----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04421456
WHO universal trial number (UTN)	-

Notes:

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	16 March 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	16 March 2022
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

- To evaluate the efficacy of GWP42003 P versus placebo after 12 weeks of treatment
- To evaluate the safety and tolerability of GWP42003 P

Protection of trial subjects:

This study was conducted in accordance with the protocol and consensus ethical principles derived from international guidelines including the Declaration of Helsinki, the ICH Harmonised Guideline: Integrated Addendum to ICH E6(R1): Guideline for GCP E6(R2), the EU Clinical Trials Directive, the EU GCP Directive and the clinical study regulations adopting European Commission Directives into national legislation.

The protocol, protocol amendments, informed consent form, Investigator's Brochure, and other relevant documents (eg, advertisements) were submitted to the Institutional Review Board/Independent Ethics Committee (IRB/IEC) by the investigator and reviewed and approved by the IRB/IEC before the study was initiated.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 August 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Spain: 3
Country: Number of subjects enrolled	United States: 68
Country: Number of subjects enrolled	Serbia: 21
Worldwide total number of subjects	95
EEA total number of subjects	6

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0

Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	95
From 65 to 84 years	0
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

A total of 95 participants who met all inclusion and no exclusion criteria were enrolled in the study and were randomized to the Placebo Run-in Period. Eighteen participants failed the Placebo Run-in Period. A total of 77 participants were randomized to 1 of 2 GWP42003-P doses or placebo treatment at a 2:2:1:1 ratio at 33 clinic centers.

### Pre-assignment

Screening details:

Once enrolled, participants were randomized to treatment following a single-blind, 2-week Placebo Run-in Period. A total of 95 participants were included the Placebo Run-in Period; 18 participants failed the Placebo Run-in Period. A total of 77 participants were randomized to the Treatment Period.

### Period 1

Period 1 title	Randomized Placebo Run-in Period
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

### Arms

<b>Arm title</b>	Pooled Placebo
------------------	----------------

Arm description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo per day for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

Dosage and administration details:

Oral dose of matched placebo

<b>Number of subjects in period 1</b>	Pooled Placebo
Started	95
Completed	77
Not completed	18
Placebo run-in failures	18

**Period 2**

Period 2 title	Randomized Treatment Period
Is this the baseline period?	Yes <sup>[1]</sup>
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

**Arms**

Are arms mutually exclusive?	Yes
------------------------------	-----

<b>Arm title</b>	GWP42003-P 300 mg
------------------	-------------------

## Arm description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 300 milligrams (mg) per day for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

## Dosage and administration details:

Oral dose of GWP42003-P 150 mg administered twice daily

<b>Arm title</b>	GWP42003-P 1000 mg
------------------	--------------------

## Arm description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 1000 milligrams (mg) per day for 12 weeks.

Arm type	Experimental
Investigational medicinal product name	GWP42003-P
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

## Dosage and administration details:

Oral dose of GWP42003-P 500 mg administered twice daily

<b>Arm title</b>	Pooled Placebo
------------------	----------------

## Arm description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo per day for 12 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Oral solution
Routes of administration	Oral use

## Dosage and administration details:

Oral dose of matched placebo

## Notes:

[1] - Period 1 is not the baseline period. It is expected that period 1 will be the baseline period.

Justification: The baseline period is the Treatment Period where patients were randomized to either GWP42003-P (300 mg or 1000 mg) or placebo.

<b>Number of subjects in period 2<sup>[2]</sup></b>	<b>GWP42003-P 300 mg</b>	<b>GWP42003-P 1000 mg</b>	<b>Pooled Placebo</b>
Started	27	24	26
Completed	23	19	19
Not completed	4	5	7
Withdrawal of parent/legal representative consent	1	-	1
Adverse event, non-fatal	-	1	-
Not specified	-	1	3
Lost to follow-up	2	2	1
Participant non-compliance	1	1	2

Notes:

[2] - The number of subjects reported to be in the baseline period are not the same as the worldwide number enrolled in the trial. It is expected that these numbers will be the same.

Justification: The worldwide number of patients included 95 participants who were enrolled in the study and randomized to the Placebo Run-in Period. Eighteen participants failed the Placebo Run-in Period. Therefore, a total of 77 participants were randomized to the Treatment Period and is considered the baseline period.

## Baseline characteristics

### Reporting groups

Reporting group title	GWP42003-P 300 mg
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 300 milligrams (mg) per day for 12 weeks.	
Reporting group title	GWP42003-P 1000 mg
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 1000 milligrams (mg) per day for 12 weeks.	
Reporting group title	Pooled Placebo
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo per day for 12 weeks.	

Reporting group values	GWP42003-P 300 mg	GWP42003-P 1000 mg	Pooled Placebo
Number of subjects	27	24	26
Age categorical Units: Subjects			
In utero	0	0	0
Preterm newborn infants (gestational age < 37 wks)	0	0	0
Newborns (0-27 days)	0	0	0
Infants and toddlers (28 days-23 months)	0	0	0

Female	20		
Male	57		

## End points

### End points reporting groups

Reporting group title	Pooled Placebo
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo per day for 12 weeks.	
Reporting group title	GWP42003-P 300 mg
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 300 milligrams (mg) per day for 12 weeks.	
Reporting group title	GWP42003-P 1000 mg
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 1000 milligrams (mg) per day for 12 weeks.	
Reporting group title	Pooled Placebo
Reporting group description: Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo per day for 12 weeks.	

### Primary: Least Square Mean Change From Baseline in the Positive and Negative Symptoms Scale Total (PANSS-T) Score

End point title	Least Square Mean Change From Baseline in the Positive and Negative Symptoms Scale Total (PANSS-T) Score
End point description: The PANSS-T is a medical scale used for measuring symptom severity of participants with schizophrenia or related psychotic disorder. It is a 30-item rating instrument that assesses the positive and negative symptoms of schizophrenia as well as symptoms of general psychopathology. Individual items are rated on a 7-point scale, where 1 = absent and 7 = extreme. A PANSS-T score is derived from the sum of the 30 items and the total score ranges from 30 to 210, where higher scores represent worse outcome. The least square mean change from baseline is being reported and negative values indicate an improvement in outcome.	
End point type	Primary
End point timeframe: Baseline up to Week 12	

End point values	GWP42003-P 300 mg	GWP42003-P 1000 mg	Pooled Placebo	
Subject group type	Reporting group	Reporting group	Reporting group	
Number of subjects analysed	23	19	19	
Units: units on a scale				
least squares mean (standard error)				
PANSS-T Score	-10.49 (± 1.64)	-10.69 (± 1.75)	-8.74 (± 1.78)	

## Statistical analyses

<b>Statistical analysis title</b>	GWP42003-P 300 mg vs Pooled placebo
Comparison groups	GWP42003-P 300 mg v Pooled Placebo
Number of subjects included in analysis	42
Analysis specification	Pre-specified
Analysis type	superiority <sup>[1]</sup>
P-value	= 0.4528
Method	Mixed-effects repeated measures model
Parameter estimate	Least square mean difference
Point estimate	-1.75
Confidence interval	
level	95 %
sides	2-sided
lower limit	-6.35
upper limit	2.84
Variability estimate	Standard error of the mean
Dispersion value	2.33

Notes:

[1] - The repeated measures model includes stratification factors (sex and region), associated baseline, visit, randomised treatment arm and visit by treatment arm interaction as fixed effects and visit repeated within each participant as a repeated effect. For the PANSS-T score, baseline PANSS-P, baseline PANSS-N, and baseline PANSS-G are included in the model as fixed effects for the associated baseline instead of baseline PANSS-T.

<b>Statistical analysis title</b>	GWP42003-P 1000 mg vs Pooled placebo
Comparison groups	GWP42003-P 1000 mg v Pooled Placebo
Number of subjects included in analysis	38
Analysis specification	Pre-specified
Analysis type	superiority <sup>[2]</sup>
P-value	= 0.4226
Method	Mixed-effects repeated measures model
Parameter estimate	Least square mean difference
Point estimate	-1.96
Confidence interval	
level	95 %
sides	2-sided
lower limit	-6.76
upper limit	2.85
Variability estimate	Standard error of the mean
Dispersion value	2.44

Notes:

[2] - The repeated measures model includes stratification factors (sex and region), associated baseline, visit, randomised treatment arm and visit by treatment arm interaction as fixed effects and visit repeated within each participant as a repeated effect. For the PANSS-T score, baseline PANSS-P, baseline PANSS-N, and baseline PANSS-G are included in the model as fixed effects for the associated baseline instead of baseline PANSS-T.

## Primary: Least Square Mean Change From Baseline in the PANSS Positive Subscale (PANSS-P) Score

End point title	Least Square Mean Change From Baseline in the PANSS Positive Subscale (PANSS-P) Score
-----------------	---------------------------------------------------------------------------------------

End point description:

The PANSS 'P' Scale was calculated as the sum of the items prefixed with an P, 7 items in total, i.e. delusions, conceptual disorganization, hallucinatory behavior, excitement, grandiosity, suspiciousness/persecution and hostility. Individual items are rated on a 7-point scale, where 1 = absent

and 7 = extreme. The least square mean change from baseline is being reported and negative values indicate an improvement in outcome.

End point type	Primary
End point timeframe:	
Baseline up to Week 12

### **Primary: Number of Participants With Minimally or Better Clinical Global Impression of Improvement (CGI-I) Score at Week 12**

End point title	Number of Participants With Minimally or Better Clinical Global Impression of Improvement (CGI-I) Score at Week 12
-----------------	--------------------------------------------------------------------------------------------------------------------

End point description:

The CGI-I is a 7-point scale used to rate the improvement of participants' condition at the time of assessment. Compared to the patient's condition at baseline, the participants' condition was rated as 1 = very much improved since initiation of treatment; 2 = much improved; 3 = minimally improved; 4 = no change from baseline; 5 = minimally worse; 6 = much worse; 7 = very much worse since the initiation of treatment. Higher scores indicate a worse outcome. The number of participants with minimally or better improvements (score of 3 or better) are being reported.

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

All adverse events (AEs) were collected from baseline up to end of study, approximately 1 year 8 months.

Assessment type	Systematic
-----------------	------------

### Dictionary used

Dictionary name	MedDRA
-----------------	--------

Dictionary version	24.1
--------------------	------

### Reporting groups

Reporting group title	GWP42003-P 300 mg
-----------------------	-------------------

Reporting group description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 300 milligrams (mg) per day for 12 weeks.

Reporting group title	GWP42003-P 1000 mg
-----------------------	--------------------

Reporting group description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive an oral dose of GWP42003-P 1000 milligrams (mg) per day for 12 weeks.

Reporting group title	Pooled Placebo (Treatment Period)
-----------------------	-----------------------------------

Reporting group description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo per day for 12 weeks.

Reporting group title	Pooled Placebo (Placebo Run-in Period)
-----------------------	----------------------------------------

Reporting group description:

Clinically stable schizophrenia participants experiencing inadequate response to antipsychotic treatment who were randomized to receive a matching placebo for 2 weeks (including participants who failed the placebo run-in period).
