

Clinical trial results:

A prospective, Phase 3, multi-center, single-arm, imaging study investigating the safety and diagnostic performance of rhPSMA-7.3 (18F) PET ligand in men with newly diagnosed prostate cancer

Summary

EudraCT number	2019-003381-40
Trial protocol	DE FI NL
Global end of trial date	21 June 2021

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	18 February 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	21 June 2021
Global end of trial reached?	Yes
Global end of trial date	21 June 2021
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To assess the sensitivity and specificity of rhPSMA-7.3 (18F) positron emission tomography (PET) in detecting N1 disease (as determined by the central blinded image evaluation [BIE]) on a patient level compared to the histopathology of pelvic lymphatic tissue removed during radical prostatectomy (RP) and pelvic lymph node dissection (PLND). At least one positive pelvic LN on PET (N1) and one positive lymph node (LN) as determined by histopathology (pN1) on the same side of the pelvis (left or right) will be deemed a True Positive (TP) at the patient level.

Protection of trial subjects:

This study was conducted according to the principles of the Declaration of Helsinki and in accordance with the International Council for Harmonisation (ICH) guidelines on Good Clinical Practice (GCP). In addition, all relevant regulations and guidance were followed, including United States (US), European Union (EU) and national legislation. As this study was conducted during the coronavirus disease 2019 (COVID-19) global pandemic, relevant guidance from the Food and Drug Administration (FDA) and European Medicines Agency (EMA) was followed, including, but not limited to, the FDA Guidance for Industry, Investigators, and Institutional Review Boards - Conduct of Clinical Trials of Medical Products During the COVID-19 Public Health Emergency (March 2020; updated 30 Aug 21) and the EMA Guidance on the Management of Clinical Trials During the COVID-19 (Coronavirus) Pandemic (Version 4, 04 Feb 21). Prior to study initiation in each country, the study was authorized by the relevant Regulatory Agency/Competent Authority. All applicable privacy regulations (e.g. US Health Insurance Portability and Accountability Act [HIPAA] 1996; EU General Data Protection Regulation 2018; United Kingdom [UK] Data Protection Act 2018) were adhered to.

Background therapy:

None

Evidence for comparator:

None

Actual start date of recruitment	02 March 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Finland: 18
Country: Number of subjects enrolled	Germany: 86
Country: Number of subjects enrolled	United States: 238
Country: Number of subjects enrolled	Netherlands: 14
Worldwide total number of subjects	356
EEA total number of subjects	118

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	163
From 65 to 84 years	193
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

This study was from 02 Mar 20 (first patient, screening visit) and 18 Feb 22 (database lock), with the last patient, last visit on 21 Jun 21. It was conducted at 34 activated study sites (31 recruited) in 4 countries. Of the 372 patients screened, 356 patients met all the study eligibility criteria. 16 patients were screen failures so not included

Pre-assignment

Screening details:

Baseline safety evaluations performed at screening (Visit 1) comprised vital signs, focused physical examination and recording of any adverse events (AEs) from the time of informed consent.

Period 1

Period 1 title	Single Arm (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Blinding implementation details:

Not applicable

Arms

Arm title	Single Arm
-----------	------------

Arm description:

All patients who received the rhPSMA-7.3 (18F) injection

Arm type	Experimental
Investigational medicinal product name	rhPSMA-7.3 (18F)
Investigational medicinal product code	rhPSMA-7.3 (18F)
Other name	flotufolastat F18
Pharmaceutical forms	Solution for injection
Routes of administration	Intravenous bolus use

Dosage and administration details:

All patients were planned to receive a single dose of IMP, with an administered activity of 8 mCi (296 MBq) \pm 20% of rhPSMA-7.3 (18F), delivered as an IV bolus injection followed by a 10 mL fast 0.9% sodium chloride flush. The mass dose administered was less than 100 μ g/patient. rhPSMA-7.3 (18F) was supplied as a sterile, aqueous solution for IV administration either in a multi-dose vial sealed with a synthetic rubber closure and aluminum overseal or in a single unit dose syringe depending on the manufacturing location.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All AEs were recorded throughout the study from informed consent at screening until the last study visit. AEs reported in EudraCT are treatment-emergent.

Adverse event reporting additional description:

AEs were coded using MedDRA and data listed by patient, including study site, patient identifier, age, race, AE (MedDRA SOC, PT and verbatim term), dates of onset and resolution, duration, CTCAE toxicity grade, seriousness, action taken, outcome and causality. Deaths, SAEs and AEs leading to discontinuation were also listed by patient

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
07 January 2020	<p>Several updates based on feedback from the US FDA.</p> <p>Update: studies evaluating 68Ga-PSMA-11 PET or 18F-DCFPyL-PSMA PET in the Study Rationale, including addition of point estimate ranges for the studies quoted.</p> <p>Clarify: study rationale that the study was to be performed in patients eligible for curative intent, locoregional therapy.</p> <p>Clarify: baseline conventional imaging was required if not performed in the 60 days prior to screening.</p> <p>Clarify: assessment of objectives and endpoints was based on central BIE.</p> <p>Add: exploratory objective added to "evaluate the number of PET-positive pelvic LNs by central BIE as compared to the number of pathologic positive LNs (by local histopathology analysis) in each region", with corresponding endpoint.</p> <p>Clarify: dose of IMP could be 8 mCi (296 MBq) \pm 20% rhPSMA-7.3 (18F).</p> <p>Add: to allow discussion of rhPSMA-7.3 (18F) PET results and further procedures/treatment plan to be conducted by telephone at the clinician's discretion.</p> <p>Clarify: physical examination would be focused in nature.</p> <p>Clarify: safety follow-up visit was to be conducted within 1 to 3 days post-IMP administration.</p> <p>Add: interim look at the percentage of pN1 and pN0 patients after enrollment of 150 patients.</p> <p>Amend: inclusion criterion 4 to remove primary treatment with EBRT.</p> <p>Clarify: additions to standard of care surgical treatments for patients with M0 and M1 disease on local PET interpretation.</p> <p>Clarify: added to confirmatory imaging when used as SoT.</p> <p>Define: unrelated AE updated.</p> <p>Update: sample size and number of evaluable patients required before enrollment will stop, plus the number of positive and negative cases required for enrollment to stop.</p> <p>Update: analysis sets.</p> <p>Clarify: rhPSMA-7.3 (18F) would be considered effective in detecting N1 disease if the co-primary endpoints were met by the same 2 of 3 readers.</p> <p>Other minor typographical edits and clarifications.</p>
04 June 2020	<p>Germany specific</p> <p>Several updates to implement feedback from BfArM:</p> <p>Add: text on the replacement of patients who dropout.</p> <p>Exclusion criterion added for patients with known hypersensitivity to the active substance or any excipients of the IMP.</p>

01 July 2020	<p>Patient safety and BfArM feedbackfeedback (COVID-19):</p> <p>Add: latest NCCN Guidelines.</p> <p>Combine: exploratory objectives/endpoints 2 & 3.</p> <p>Extend: screening: 28-45 days (COVID-19).</p> <p>Add: Visits 1 and 2 combined option, screening evaluation could occur on day of rhPSMA-7.3 (18F) administration (COVID-19) and clarify that the procedure was to combine IMP manufacture visits.</p> <p>Extend: safety follow-up visit to within 1-5 days (COVID-19).</p> <p>Extend: period from Visit 2 to the scheduled surgery and/or follow up procedures up to 60 (COVID-19).</p> <p>Clarify: study population to be treatment naïve and receive standard of care and clarifications added to inclusion criteria risk definitions.</p> <p>Add: exclusion criterion for patients with hypersensitivity to active substance or any IMP excipient.</p> <p>Add: baseline conventional imaging to be performed at least 24 hours prior to the investigational rhPSMA-7.3 (18F) PET scan.</p> <p>Add: focused physical examination could be performed by a clinician and could be by telephone.</p> <p>Specify: when collected, pre-sacral LNs to be placed in a separate packet from other specimens prior to pathology assessment.</p> <p>Increase: from 2-3 central readers for the rhPSMA-7.3 (18F) PET scans and the information they were provided add: Independent Review Charter.</p> <p>Clarify: conventional imaging performed at non-participating institutions allowed if scans were reviewed by study site.</p> <p>Add: text on replacement of dropouts.</p> <p>Amend: time from end of injection of rhPSMA-7 (18F) to imaging start from 50-90 mins to 50-70 mins.</p> <p>Update: SAE reporting email address and clarify SAEs to be reported immediately.</p> <p>Add: criteria to temporarily halt/stop enrollment.</p> <p>Add: exclude patients with known hypersensitivity to the active substance or any IMP excipient.</p> <p>Add: option for remote study monitoring (COVID-19).</p> <p>Clarify: urgent safety measures may include amendments made due to the COVID-19 pandemic to ensure patient safety by minimizing SARS-CoV-2 exposure.</p> <p>Minor typographical edit.</p>
29 September 2020	<p>Updates to implement feedback from BfArM:</p> <p>Remove: reference to remote consent and pre-screening via telephone contact, which were not permitted in Germany.</p> <p>Administrative change to update the Medical Monitor details.</p>

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

None

Notes:
