

Clinical trial results:

MRX-503: An Open-label Extension Study to Evaluate the Long-term Safety and Efficacy of Maralixibat in the Treatment of Subjects with Progressive Familial Intrahepatic Cholestasis (PFIC)

Summary

EudraCT number	2019-003395-39
Trial protocol	DE GB BE PL FR HU AT IT
Global end of trial date	23 April 2025

Results information

Result version number	v1
This version publication date	09 November 2025
First version publication date	09 November 2025

Trial information

Trial identification

Sponsor protocol code	MRX-503

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001475-PIP03-17
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	23 April 2025
Is this the analysis of the primary completion data?	Yes
Primary completion date	23 April 2025
Global end of trial reached?	Yes
Global end of trial date	23 April 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective of the study is to evaluate the long-term safety and tolerability of maralixibat.

Protection of trial subjects:

All study participants (caregivers as applicable) were required to read and sign an Informed Consent Form (ICF). Participants were re-consented to the most current version of the ICF(s) during their participation in the study.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	16 December 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 5
Country: Number of subjects enrolled	United Kingdom: 2
Country: Number of subjects enrolled	Austria: 2
Country: Number of subjects enrolled	Belgium: 2
Country: Number of subjects enrolled	France: 3
Country: Number of subjects enrolled	Germany: 2
Country: Number of subjects enrolled	Italy: 5
Country: Number of subjects enrolled	Argentina: 3
Country: Number of subjects enrolled	Brazil: 10
Country: Number of subjects enrolled	Canada: 2
Country: Number of subjects enrolled	Colombia: 5
Country: Number of subjects enrolled	Lebanon: 13
Country: Number of subjects enrolled	Mexico: 8
Country: Number of subjects enrolled	Singapore: 2
Country: Number of subjects enrolled	Türkiye: 2
Country: Number of subjects enrolled	United States: 18
Worldwide total number of subjects	84
EEA total number of subjects	19

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	18
Children (2-11 years)	62
Adolescents (12-17 years)	4
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 84 participants were enrolled at 28 sites across 17 countries (Argentina, Austria, Belgium, Brazil, Canada, Colombia, France, Germany, Italy, Lebanon, Mexico, Poland, Singapore, Turkey, United Kingdom, United States)

Pre-assignment

Screening details:

MRX-503, screening starts after signing the ICF and confirming eligibility. It overlaps with the MRX-502 end-of-treatment (EOT) visit: if the MRX-503 baseline visit occurs the same day or within 30 days of the MRX-502 EOT visit, those prior evaluations count as the MRX-503 baseline assessments.

Period 1

Period 1 title	Open-Label extension (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	Open Label Extension
-----------	----------------------

Arm description:

This open-label, extension study comprised one continuous treatment period, including:

- Dose-escalation (4-6 weeks)
- Stable-dosing (until the sponsor or the subject terminates the study, discontinues/ transitions to commercial product)
- Safety follow-up phases.

Subjects were analyzed in two cohorts:

- The Primary Cohort (non-truncated PFIC2)
- The Secondary Cohort (other PFIC subtypes, including PFIC1, PFIC3, truncated PFIC2, or incomplete response after PEBD)

Arm type	Experimental
Investigational medicinal product name	Maralixibat
Investigational medicinal product code	
Other name	LIVMARLI™
Pharmaceutical forms	Oral solution in bottle
Routes of administration	Oral use

Dosage and administration details:

Maralixibat was administered orally as a ready-to-use oral solution (5, 10, 15, or 20 mg/mL) based on individual body weight, up to 600 µg/kg twice daily (BID).

Dosing followed a weekly escalation schedule over 4–6 weeks as follows:

- Week 1: 150 µg/kg BID
- Week 2: 300 µg/kg BID
- Week 3: 450 µg/kg BID
- Week 4 and onward: 600 µg/kg BID (maximum tolerated dose)

Doses were taken approximately 30 minutes before breakfast and the evening meal.

Subjects unable to tolerate 150 µg/kg BID were discontinued.

The maximum tolerated dose established by Week 6 was maintained for the Stable Dosing period until study termination or transition to commercial product.

Number of subjects in period 1	Open Label Extension
Started	84
Completed	48
Not completed	36
Consent withdrawn by subject	7
Physician decision	3
Disease progression	2
Rolled over under drug interruption.	1
Adverse event, non-fatal	5
Liver transplant	17
Lost to follow-up	1

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From the first dose through 14 days after the last dose of maralixibat.

Adverse event reporting additional description:

Adverse events were systematically collected from all participants at each scheduled visit and through continuous monitoring from first dose to 14 days after last dose. Investigators were required to actively elicit and record all new or worsening events, with assessment of severity, relationship, and outcome.

Assessment type	Systematic

occurrences (all)	5		

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
15 June 2020	This amendment clarified the study design and baseline transition from MRX-502 to MRX-503, refined dosing and packaging details, and aligned the safety-monitoring baseline with the previous study to ensure consistency. It introduced provisions for home or remote visits to maintain study conduct during COVID-19 restrictions and added the Work Productivity and Activity Impairment Questionnaire (WPAI:PFIC) to capture quality-of-life data. Secondary endpoints were expanded to include serum bile acid control and time to liver-associated events, and Appendix 9 was added to guide pandemic-related procedures. These changes were made to improve operational flexibility, maintain patient safety and data integrity during public-health disruptions, and refine the efficacy assessments based on emerging clinical experience and regulatory feedback.
18 November 2021	This amendment updated the protocol to reflect maralixibat's approval and evolving regulatory standards. Terminology was revised from ASBT to IBAT, and background sections were aligned with the current Investigator's Brochure. The stable dosing period was extended indefinitely to allow continued treatment until study termination or transition to commercial supply. A new "All PFIC" analysis cohort was introduced, and efficacy and safety sections were reorganized with updated endpoints and statistical methods. Electronic SAE reporting via the EDC system was implemented, safety monitoring and liver-function follow-up were strengthened, and new guidance for dose interruptions, PEBD, and COVID-19 vaccination was added. These updates were made to expand patient access, modernize safety oversight, and align the study with post-approval and electronic data-capture requirements.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
