

Clinical trial results:

A Phase 3, Multicenter, Randomized, Double-Blind, Placebo-controlled, Parallel-Group Study to Evaluate the Efficacy, Safety, and Tolerability of Oral Atogepant for the Prophylaxis of Migraine in Participants With Episodic Migraine Who Have Previously Failed 2 to 4 Classes of Oral Prophylactic Treatments (ELEVATE)

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 August 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 August 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

This study assessed the safety, tolerability, and efficacy of Atogepant 60 milligrams (mg) compared with placebo in episodic migraines in subjects who previously failed 2 to 4 classes of oral prophylactic treatments.

Protection of trial subjects:

All subjects were required to read and sign an Informed Consent Form.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	05 March 2021
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Canada: 12
Country: Number of subjects enrolled	Czechia: 125
Country: Number of subjects enrolled	Denmark: 2
Country: Number of subjects enrolled	France: 4
Country: Number of subjects enrolled	Germany: 36
Country: Number of subjects enrolled	Hungary: 14
Country: Number of subjects enrolled	Italy: 15
Country: Number of subjects enrolled	Netherlands: 6
Country: Number of subjects enrolled	Poland: 49
Country: Number of subjects enrolled	Russian Federation: 15
Country: Number of subjects enrolled	Spain: 6
Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	United States: 28

EEA total number of subjects	257

Notes:

Subjects enrolled per age group

In utero	0
----------	---

Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	311
From 65 to 84 years	4
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 315 subjects were randomised to receive atogepant-matching placebo or atogepant in a double-blind treatment period, and 313 subjects received at least 1 dose of study intervention (safety population).

Pre-assignment

Screening details:

From the 295 subjects who completed the double-blind period 87 subjects entered the follow-up period. Subjects who rolled over directly at Week 12 to study 3101-312-002 [NCT04686136] did not enter the safety-follow up period.

Period 1

Period 1 title	Double-blind Treatment (Up to Week 12)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received atogepant-matching placebo tablets, orally, once daily (QD) for up to 12 weeks in a double-blind (DB) treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Atogepant matching placebo tablets.

Arm title	Atogepant 60 mg
------------------	-----------------

Arm description:

Subjects received atogepant 60 mg, orally, QD for up to 12 weeks in a DB treatment period.

Arm type	Experimental
Investigational medicinal product name	Atogepant 60 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Atogepant tablets.

Number of subjects in period 1	Placebo	Atogepant 60 mg
Started	158	157
Safety Population	157	156
Modified intent-to-treat Population	154	151
Off-treatment Hypothetical Estimand	155	154
Completed	151	144
Not completed	7	13
Adverse event, non-fatal	2	4
Pregnancy	-	1
Withdrawal by Subject	2	2
Protocol deviation	3	5
Lack of efficacy	-	1

Period 2

Period 2 title	Follow-up Period (Week 13 to Week 16)
Is this the baseline period?	No
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Subjects received atogepant-matching placebo tablets, orally, once daily (QD) for up to 12 weeks in a double-blind (DB) treatment period.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Atogepant matching placebo tablets.

Arm title	Atogepant 60 mg
------------------	-----------------

Arm description:

Subjects received atogepant 60 mg, orally, QD for up to 12 weeks in a DB treatment period.

Arm type	Experimental
Investigational medicinal product name	Atogepant 60 mg
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:
Atogepant tablets.

Number of subjects in period 2^[1]	Placebo	Atogepant 60 mg
Started	43	44
Completed	42	44
Not completed	1	0
Withdrawal by Subject	1	-

Notes:

[1] - The number of subjects starting the period is not consistent with the number completing the preceding period. It is expected the number of subjects starting the subsequent period will be the same as the number completing the preceding period.

Justification: Of 295 subjects who completed the double-blind period, 87 subjects entered the follow-up period. Subjects who rolled over directly at Week 12 to study 3101-312-002 [NCT04686136] did not enter the safety-follow up period.

Monthly Migraine Days in mITT Population			
A migraine day was any calendar day on which the subject experienced a migraine headache. The monthly (4-week) migraine days was defined as the total number of reported migraine days in diary divided by total number of days with diary records during each 4-week period and multiplied by 28. mITT population included all randomised subjects who received at least 1 dose of study treatment, had an evaluable baseline period of eDiary data, and had at least 1 evaluable post-baseline 4-week period of eDiary data during the double-blind treatment period.			
Units: Migraine days per month

Each 4-week period was averaged. Baseline: number of headache days during the last 28 days prior to the randomisation date. Negative change from baseline indicates improvement. MMRM was used for analysis. OTHE population: all randomised subjects who received at least 1 dose of study intervention, had an evaluable baseline period of eDiary data, and had at least 1 evaluable postbaseline 4-week period (Weeks 1 to 4, 5 to 8, 9 to 12) of eDiary data, regardless of whether on study intervention or off study intervention.

Secondary: Number of Subjects With At Least a 50% Reduction in 3-Month Average of Monthly Migraine Days Across the 12- week Treatment Period in OTHE Population

End point title	Number of Subjects With At Least a 50% Reduction in 3-Month Average of Monthly Migraine Days Across the 12- week Treatment Period in OTHE Population
-----------------	--

End point description:

Data is reported for 50% responders averaged at each 4-week period. 50% responders are subjects with at least a 50% reduction from baseline in 3-month average of monthly migraine days. Subjects recorded daily duration of migraine in a diary. A migraine day was any calendar day on which the subject experienced a migraine headache. The monthly (4-week) migraine days are equal to total number of reported migraine days in diary divided by total number of days with diary records in each 4-week period multiplied by 28. OTHE population consisted of all randomised subjects who received at least 1 dose of study intervention, had an evaluable baseline period of eDiary data, and had at least 1 evaluable postbaseline 4-week period (Weeks 1 to 4, 5 to 8, 9 to 12) of eDiary data, regardless of whether on study intervention or off study intervention.

Secondary: Change From Baseline in Mean Monthly Acute Medication Use Days Across the 12-week Treatment Period in mITT Population

End point title	Change From Baseline in Mean Monthly Acute Medication Use Days Across the 12-week Treatment Period in mITT Population
-----------------	---

End point description:

An acute medication use day is defined as any day on which a subject reports, per eDiary, the intake of allowed medication(s) to treat an acute migraine. The monthly (4-week) acute medication use days were defined as the total number of reported acute medication use days in the diary divided by the total number of days with diary records during each 4-week period and multiplied by 28. Each 4-week period was averaged. Baseline is defined as the number of migraine days during the last 28 days prior to the randomisation date. A negative change from baseline indicates improvement. mITT population included all randomised subjects who received at least 1 dose of study treatment, had an evaluable baseline period of eDiary data, and had at least 1 evaluable post-baseline 4-week period of eDiary data during the double-blind treatment period.

Secondary: Change From Baseline in Migraine Specific Quality of Life Questionnaire (MSQ) v2.1 Role Function-Restrictive Domain Score at Week 12 in mITT Population

End point title	Change From Baseline in Migraine Specific Quality of Life Questionnaire (MSQ) v2.1 Role Function-Restrictive Domain Score at Week 12 in mITT Population
-----------------	---

End point description:

The MSQ v2.1 is a 14-item questionnaire designed to measure health-related quality of life impairments attributed to migraine in the past 4 weeks. It is divided into 3 domains: Role Function Restrictive (question numbers 1-7, score ranges 7 to 42) assesses how migraines limit one's daily social and work-related activities; Role Function Preventive (question numbers 8-11, score ranges 4 to 24) assesses how migraines prevent these activities; and the Emotional Function (question numbers 12-14, score ranges 3 to 18) domain assesses the emotions associated with migraines. Subjects respond to items using a 6-point scale ranging from none of the time to all of the time. Raw dimension scores are computed as a sum of item responses and rescaled to a 0 to 100 scale, where higher scores indicate better quality of life. MMRM was used for analysis. mITT population. Secondary: Change From Baseline in the Headache Impact Test (HIT-6) Total Score at Week 12 in OTHE Population

End point title	Change From Baseline in the Headache Impact Test (HIT-6) Total Score at Week 12 in OTHE Population
-----------------	--

End point description:

HIT-6 is a 6-question assessment used to measure the impact headaches have on a subject's ability to function on the job, at school, at home, and in social situations. It assesses the effect that headaches have on normal daily life and the subject's ability to function. Responses are based on frequency using a 5-point scale ranging from "never" to "always." The HIT-6 total score, which ranges from 36 to 78, is the sum of the responses - each of which is assigned a score ranging from 6 points (never) to 13 points (always). MMRM was used for the analyses. OTHE population consisted of all randomised subjects who received at least 1 dose of study intervention, had an evaluable baseline period of eDiary data, and had at least 1 evaluable postbaseline 4-week period (Weeks 1 to 4, 5 to 8, 9 to 12) of eDiary data, regardless of whether on study intervention or off study intervention. Adverse events

Adverse events information

Timeframe for reporting adverse events:

All-cause mortality: from enrollment to end of study; TEAEs and serious AEs (SAEs): from first dose of study drug until 30 days after last dose of study drug; mean duration on study drug: 93.5 days and 90.0 days for Placebo and Atogepa, respectively.

Adverse event reporting additional description:

All-cause mortality is reported for all subjects enrolled in the study. Serious and other adverse events are reported for safety population which consisted of all subjects who received at least 1 dose of study intervention.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
03 April 2020	The following changes were implemented with Amendment 1: - Clarified the study rationale. - Added the diagnosis of "medication overuse headache" in key exclusion criteria and synopsis. - Added "region" to the analysis model. - Updated the study design by clarifying the block randomisation procedure.
01 December 2020	The following changes were implemented with Amendment 2: -Removed the atogepant 30 mg QD treatment arm from the study and reduced the total number of subjects from 627 to 300 subjects. - Define the number of scheduled study visits. - Updated section with the results from the recently completed Phase 3 studies (Study 3101-301-002 and Study 3101-302-002) in Background section. - Revised the first 3 secondary objectives and endpoints. - Added text to clarify the previous secondary objective and endpoints of evaluating the effect of atogepant versus placebo on functioning and activity impairment by specifying the AIM-D domains of Performance of Daily Activities and Physical Impairment. Revised exploratory objectives and endpoints. - Clarification of stratification strategy. - Adjusted block size for block randomisation to accommodate the deletion of the atogepant 30 mg QD treatment arm. - Reference to Subpopulation A removed. - Added that approximately 50% of randomised subjects will have failed >2 classes of prior migraine prophylactic medications. - Defined the number of scheduled study visits for subjects who will roll over into Study 3101-312-002 (long-term extension study) and those who do not. - Updated the justification for dose section by adding results from Study 3101-301-002. - Simplified the enrolment requirements. - Revised the Exclusion criteria to clarify the use of barbiturate containing and opioid-containing analgesics on a monthly basis in the 3 months prior to Visit 1; Clarified that the use of any investigational or approved CGRP-RA is excluded. - Clarified that prior use of ubrogepant or rimegepant is not exclusionary. - Clarified possibilities for rescreening in pandemic situations (eg, COVID-19). - Added text related to the subgroup analyses. - Added text related to an Offtreatment Hypothetical Estimand. - Clarified prohibited concomitant medication. - Clarified the Schedule of Activities for remote visits.
