

Clinical trial results:

A proof of concept study to evaluate the efficacy, safety and tolerability of secukinumab 300 mg over 32 weeks in adult patients with biopsy-proven forms of lichen planus not adequately controlled with topical therapies - PRELUDE

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	03 May 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	03 May 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The primary objective was to demonstrate the clinical efficacy of secukinumab 300 mg every 4 weeks (Q4W) in subjects with cutaneous lichen planus (CLP), mucosal lichen planus (MLP), or lichen planopilaris (LPP) inadequately controlled by topical therapies, with respect to improvement in Investigator's Global Assessment.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 28
Country: Number of subjects enrolled	Germany: 34
Country: Number of subjects enrolled	United States: 49
Worldwide total number of subjects	111
EEA total number of subjects	62

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	87

From 65 to 84 years	24
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

163 subjects (3 cohorts) were screened and 111 were randomized. Subjects in the AIN457 300 mg Q4W group in TP1 continued on AIN457 300mg Q4W in TP2. Subjects in the Placebo group in TP1 received AIN457 300mg Q2W in TP2. Patients in the Placebo group with spontaneous remission at Week 16 entered the Follow-up period.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Data analyst, Assessor

Arms

Are arms mutually exclusive?	No
Arm title	AIN457 300 mg Q4W - TP 1 - CLP cohort

Arm description:

AIN457 300 mg every 4 weeks up to 16 weeks administered via a pre-filled syringe

Arm type	Experimental
Investigational medicinal product name	secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

300 mg every 4 weeks (Q4W)

Arm title	Placebo - TP 1 - CLP cohort
------------------	-----------------------------

Arm description:

Matching placebo administered every 4 weeks up to 16 weeks via a pre-filled syringe

Arm type	Placebo
Investigational medicinal product name	Matching placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection/infusion in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Matching placebo every 4 weeks (Q4W)

Secondary: Number (%) of subjects with Dermatology Life Quality Index response (DLQI 0/1) up to Week 32 - CLP cohort - Entire treatment period (FAS)

End point title	Number (%) of subjects with Dermatology Life Quality Index response (DLQI 0/1) up to Week 32 - CLP cohort - Entire treatment period (FAS) ^[6]
-----------------	--

End point description:

The DLQI is a 10-item general dermatology disability index designed to assess health-related quality of life (HRQoL) in adult subjects with skin diseases such as eczema, psoriasis, acne, and viral warts (Finlay and Khan 1994). The measure is self-administered and includes domains of daily activities, leisure, personal relationships, symptoms and feelings, treatment, and work/school. The recall period is the last week, and the instrument requires 1 to 2 minutes for completion. Each item has four response categories ranging from 0 (not at all) to 3 (very much). "Not relevant" is also a valid response and is scored as 0. The DLQI total score is a sum of the 10 questions. Scores range from 0 to 30, with higher scores indicating greater HRQoL impairment.

Secondary: Summary of baseline score and change from baseline in Oral Lichen Planus Symptom Severity Measure (OLPSSM) - MLP Cohort - (BOCF) – Entire treatment period

End point title	Summary of baseline score and change from baseline in Oral Lichen Planus Symptom Severity Measure (OLPSSM) - MLP Cohort - (BOCF) – Entire treatment period ^[15]
-----------------	--

End point description:

OLPSSM is a self-administered assessment of the symptom experience of subjects with oral LP in clinical studies. It includes 7 triggers contributing to soreness of oral lichen planus: Brushing teeth, eating food, drinking liquids, smiling, breathing through mouth, talking and touching. These 7 items contributed equally to a total OLP symptom severity score, ranging from 0 to 28, with higher scores indicating worse severity.

End point type	Secondary

Secondary: Summary of baseline score and change from baseline for Scalpdex – LPP cohort (BOCF) (FAS)

End point title	Summary of baseline score and change from baseline for Scalpdex – LPP cohort (BOCF) (FAS) ^[18]
-----------------	---

End point description:

Scalpdex is a self-administered, health-related quality of life instrument originally developed for scalp dermatitis. This survey includes 23 items, each item scored on a scale of 0-100, where 0=never, 25=rarely, 50=sometimes, 75=often and 100=all the time. The 23 items pertain to 3 domains: symptom, emotions and functioning. Subjects were asked to score themselves on how true each of the 23 statements has been for them over the past four weeks. the total score is the average of the scores of the 23 items. A higher total score indicated a higher impairment in quality of life.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
08 April 2020	IGA score specifications were updated to make them more specific regarding certain aspects of the disease, for easier clinical application and to cover additional cases. The use of historical biopsies (if available) was allowed at screening for subjects with all 3 subtypes of LP instead of allowing it for the LPP cohort only. This made the study more subject friendly and reduced the need for biopsies. The protocol was adapted to pandemic/epidemic related challenges and the long term impact on clinical studies and to reduce the risk of infectious disease transmission. The protocol was amended to allow for home shipment of study drug and urine pregnancy tests as well as safety assessment by telephone.
26 October 2020	The use of biopsies assessed by local pathologists was allowed.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

EudraCT system limitation does not accept blank data fields: 999 entered for blank mean data. 0 entered for blank countable data for Wk 20-32 (Placebo arm) and Wk 2-12 (Placebo to AIN457 arm) indicating no participants evaluated for that timepoint

Notes:
