

## Clinical trial results:

### A PHASE 1B/2 OPEN-LABEL STUDY EVALUATING TAZEMETOSTAT IN COMBINATION WITH ENZALUTAMIDE OR ABIRATERONE/PREDNISONE IN CHEMOTHERAPY NAIVE SUBJECTS WITH METASTATIC CASTRATION RESISTANT PROSTATE CANCER

#### Summary

EudraCT number	2019-003649-14
Trial protocol	BE
Global end of trial date	04 November 2024

#### Results information

Result version number	v2 (current)
This version publication date	01 May 2026
First version publication date	19 November 2025
Version creation reason	<ul style="list-style-type: none"><li>• Correction of full data set</li></ul> EudraCT results are updated to maintain consistency between EudraCT results and ClinicalTrials.gov results.

#### Trial information

##### Trial identification

Sponsor protocol code	EZH-1101
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04179864
WHO universal trial number (UTN)	-
Other trial identifiers	IND: 143032

Notes:

#### Sponsors

Sponsor organisation name	Epizyme, Inc.
Sponsor organisation address	400 Technology Square, 4th Floor, Cambridge, MA, United States, 02139
Public contact	Medical Director, Ipsen, clinical.trials@ipсен.com
Scientific contact	Medical Director, Ipsen, clinical.trials@ipсен.com

Notes:

#### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	04 November 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	04 November 2024
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

Phase Ib: To determine the safety and tolerability of each of the combinations (tazemetostat with enzalutamide or tazemetostat with abiraterone/prednisone); To select the recommended phase 2 doses (RP2Ds) of tazemetostat for each combination treatment based on pharmacokinetic (PK) and pharmacodynamic (PD) parameters as well as efficacy and the overall tolerability of each of the combinations (tazemetostat with enzalutamide or tazemetostat with abiraterone/prednisone).

Phase II: To determine the benefit of combining tazemetostat with enzalutamide when compared to enzalutamide monotherapy, as assessed by radiographic progression-free survival (rPFS) according to Prostate Cancer Clinical Trials Working Group 3 (PCWG3) criteria for progression in bone or in soft tissue (the latter by Response Evaluation Criteria in Solid Tumours 1.1 [RECIST 1.1]).

Protection of trial subjects:

The study was conducted under the provisions of the Declaration of Helsinki, following the International Conference on Harmonisation (ICH) Consolidated Guideline on Good Clinical Practice (GCP) and in compliance with IECs/IRBs, informed consent regulations and the sponsor's policy on bioethics.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 November 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Belgium: 1
Country: Number of subjects enrolled	Spain: 17
Country: Number of subjects enrolled	United States: 84
Worldwide total number of subjects	102
EEA total number of subjects	18

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0

Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	29
From 65 to 84 years	69
85 years and over	4

## Subject disposition

### Recruitment

Recruitment details:

This Phase 1b/2, 2-part, open-label study was conducted at 21 sites in asymptomatic or mildly symptomatic participants with progressive, metastatic castration resistant prostate cancer (mCRPC).

### Pre-assignment

Screening details:

The study consisted of 2 parts: Phase 1b (dose-escalation) and Phase 2 (randomized). The study was terminated early as Sponsor decided to discontinue the development of tazemetostat in mCRPC and the primary endpoint was not met for this study. There were no safety concerns.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Phase 1b: Tazemetostat 400 mg + Enzalutamide

Arm description:

Participants received tazemetostat 400 milligrams (mg) tablet orally twice daily (BID) from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally once daily (OD) from Cycle 1 Day 1 until death, disease progression (PD), development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Arm type	Experimental
Investigational medicinal product name	Tazemetostat
Investigational medicinal product code	EPZ-6438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received tazemetostat 400 mg tablet orally BID in continuous 28-day cycles.

Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received enzalutamide 160 mg capsule orally OD in continuous 28-day cycles.

<b>Arm title</b>	Phase 1b: Tazemetostat 600 mg + Enzalutamide
------------------	--

Arm description:

Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Arm type	Experimental
Investigational medicinal product name	Tazemetostat
Investigational medicinal product code	EPZ-6438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:	
Participants received tazemetostat 600 mg tablet orally BID in continuous 28-day cycles.	
Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Participants received enzalutamide 160 mg capsule orally OD in continuous 28-day cycles.	
<b>Arm title</b>	Phase 1b: Tazemetostat 800 mg + Enzalutamide
Arm description:	
Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Arm type	Experimental
Investigational medicinal product name	Tazemetostat
Investigational medicinal product code	EPZ-6438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received tazemetostat 800 mg tablet orally BID in continuous 28-day cycles.	
Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Participants received enzalutamide 160 mg capsule orally OD in continuous 28-day cycles.	
<b>Arm title</b>	Phase 1b: Tazemetostat 1200 mg + Enzalutamide
Arm description:	
Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Arm type	Experimental
Investigational medicinal product name	Tazemetostat
Investigational medicinal product code	EPZ-6438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use
Dosage and administration details:	
Participants received tazemetostat 1200 mg tablet orally BID in continuous 28-day cycles.	
Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details:	
Participants received enzalutamide 160 mg capsule orally OD in continuous 28-day cycles.	
<b>Arm title</b>	Phase 1b: Tazemetostat 1600 mg + Enzalutamide
Arm description:	
Participants received tazemetostat 1600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160	

mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Arm type	Experimental
Investigational medicinal product name	Tazemetostat
Investigational medicinal product code	EPZ-6438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received tazemetostat 1600 mg tablet orally BID in continuous 28-day cycles.

Investigational medicinal product name	Enzalutamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Participants received enzalutamide 160 mg capsule orally OD in continuous 28-day cycles.

<b>Arm title</b>	Phase 1b: Tazemetostat 400 mg + Abiraterone/prednisone
------------------	--

Arm description:

Participants received tazemetostat 400 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Arm type	Experimental
Investigational medicinal product name	Tazemetostat
Investigational medicinal product code	EPZ-6438
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received tazemetostat 400 mg tablet orally BID in continuous 28-day cycles.

Investigational medicinal product name	Abiraterone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received abiraterone 1000 mg tablet orally OD in continuous 28-day cycles.

Investigational medicinal product name	Prednisone
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received prednisone 5 mg tablet orally BID in continuous 28-day cycles.

<b>Arm title</b>	Phase 1b: Tazemetostat 600 mg + Abiraterone/prednisone
------------------	--

Arm description:

Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

## Baseline characteristics

### Reporting groups

Reporting group title	Phase 1b: Tazemetostat 400 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 400 milligrams (mg) tablet orally twice daily (BID) from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally once daily (OD) from Cycle 1 Day 1 until death, disease progression (PD), development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 600 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 800 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 1200 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 1600 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 1600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 400 mg + Abiraterone/prednisone
Reporting group description: Participants received tazemetostat 400 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 600 mg + Abiraterone/prednisone
Reporting group description: Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 800 mg + Abiraterone/prednisone
Reporting group description: Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 2: Tazemetostat 1200 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 2: Enzalutamide
Reporting group description: Participants received enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

## End points

### End points reporting groups

Reporting group title	Phase 1b: Tazemetostat 400 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 400 milligrams (mg) tablet orally twice daily (BID) from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally once daily (OD) from Cycle 1 Day 1 until death, disease progression (PD), development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 600 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 800 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 1200 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 1600 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 1600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 400 mg + Abiraterone/prednisone
Reporting group description: Participants received tazemetostat 400 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 600 mg + Abiraterone/prednisone
Reporting group description: Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 800 mg + Abiraterone/prednisone
Reporting group description: Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 2: Tazemetostat 1200 mg + Enzalutamide
Reporting group description: Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 2: Enzalutamide
Reporting group description: Participants received enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	

Subject analysis set title	Phase 1b: Tazemetostat Dose-escalation
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received tazemetostat 400 mg, 600 mg, 800 mg, 1200 mg and 1600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1; Participants received tazemetostat 400 mg, 600 mg and 800 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Subject analysis set title	Phase 1b: Tazemetostat + Enzalutamide
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received tazemetostat 400 mg, 600 mg, 800 mg, 1200 mg and 1600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Subject analysis set title	Phase 1b: Tazemetostat + Abiraterone/prednisone
Subject analysis set type	Safety analysis
Subject analysis set description: Participants received tazemetostat 400 mg, 600 mg and 800 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Subject analysis set title	Phase 2: Tazemetostat 1200 mg + Enzalutamide
Subject analysis set type	Intention-to-treat
Subject analysis set description: Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Subject analysis set title	Phase 2: Enzalutamide
Subject analysis set type	Intention-to-treat
Subject analysis set description: Participants received enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	

### **Primary: Phase 1b: Number of Participants With Treatment-Emergent non-Serious Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)**

End point title	Phase 1b: Number of Participants With Treatment-Emergent non-Serious Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs) <sup>[1][2]</sup>
End point description: AE: untoward medical occurrence in a participant or clinical investigation participant administered a medicinal product and which did not necessarily have a causal relationship with this study drug. SAE: AE which occurred during any study phase and at any dose of study drug, that fulfilled 1 or more of the following: resulted in death, was life-threatening, required hospitalization or prolongation of existing hospitalization, resulted in disability or incapacity, was a congenital abnormality or birth defect, or was an important medical event that might jeopardize participant or might require medical intervention to prevent one of the outcomes listed above. TEAEs: AEs that started or worsened in severity on or after date of first dose of study drug through 30 days after end of study drug, or prior to initiation of another investigational agent or cytotoxic chemotherapy. Safety population: all participants who received any dose of study drugs. TE non-serious AEs are presented with a frequency threshold of 5%.	
End point type	Primary
End point timeframe: From first dose of study drug (Day 1) up to either 30 days after last dose of study drug or until the initiation of subsequent anticancer therapy or end of treatment visit. Assessed up to 149 weeks	

#### **Notes:**

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.  
Justification: The endpoint was evaluated for only Phase 1b arms.

## Statistical analyses

No statistical analyses for this end point

### Primary: Phase 2: Radiographic Progression-Free Survival

End point title	Phase 2: Radiographic Progression-Free Survival <sup>[4]</sup> <sup>[5]</sup>
-----------------	---

End point description:

rPFS was defined as the time from date of randomization (phase 2)/date of first dose of study drug (phase 1b) to the first objective evidence of radiographic progression using RECIST 1.1 (soft tissue) and PCWG3 (bone), or death from any cause, whichever occurred first. The radiographic PD for soft tissue lesion was determined based on computed tomography (CT) or magnetic resonance imaging (MRI) per RECIST 1.1 criteria and no confirmatory scan was required for soft tissue PD; for bone lesion was determined by 2 or more new bone lesions on bone scan per PCWG3 criteria (i.e., the appearance of 2 or more new bone lesions on bone scan) and the 2 scans (i.e., the confirmatory scan is required for bone disease progression) should be at least 6 weeks apart from each other. The intent-to-treat (ITT) population included all participants who were randomized into the study.

End point type	Primary
----------------	---------

End point timeframe:

Assessments performed at screening (within 4 weeks of randomization) and every 8 weeks for first 6 months and then every 12 weeks thereafter, until death, PD, unacceptable toxicity, consent withdrawal, or termination of study. Approximately 200 weeks

Notes:

[4] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

[5] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was evaluated for only Phase 2 arms.

End point values	Phase 2: Tazemetostat 1200 mg + Enzalutamide	Phase 2: Enzalutamide		
Subject group type	Reporting group	Reporting group

### Secondary: Phase 1b and 2: Percentage of Participants With Confirmed Prostate-Specific Antigen $\geq$ 50% (PSA50) Response

End point title	Phase 1b and 2: Percentage of Participants With Confirmed Prostate-Specific Antigen $\geq$ 50% (PSA50) Response
-----------------	---

**End point description:**

Blood samples were collected for evaluation of PSA. Confirmed PSA50 response was defined as  $\geq 50\%$  decline of PSA from baseline at any time on study for participants with a baseline PSA  $\geq 1.0$  microgram per liter (mcg/L) (nanogram/milliliter [ng/mL]) per PCWG3 criteria. Baseline was defined as: Phase 1b: last value recorded for a variable prior to or on the date the participant received the first dose of study drug; Phase 2: last value recorded for a variable prior to or on the date of randomization. Phase 1b: The safety population included all participants who received any dose of the study drugs. Phase 2: The ITT population included all participants who were randomized into the study. As pre-specified in statistical analysis plan (SAP), efficacy results for phase 1b were performed by "treatment group" for Phase 1b which refers to 1) Tazemetostat + Enzalutamide and 2) Tazemetostat + Abiraterone/Prednisone regardless of dose level, hence pooled data for Phase 1b is presented.

End point type	Secondary
----------------	-----------

**End point timeframe:**

From Cycle 1 Day 1 (Baseline) up to either 30 days after last dose of study drug or until initiation of subsequent anticancer therapy or end of treatment visit. Assessed up to 149 weeks and 191 weeks for Phase 1b and Phase 2 respectively

End point values	Phase 1b: Tazemetostat + Enzalutamide	Phase 1b: Tazemetostat + Abiraterone/pr ednisone	Phase 2: Tazemetostat 1200 mg + Enzalutamide	Phase 2: Enzalutamide

**Secondary: Phase 1b and 2: Objective Response Rate (ORR)**

End point title	Phase 1b and 2: Objective Response Rate (ORR)
-----------------	---

**End point description:**

ORR was defined as the percentage of participants with complete response (CR) or partial response (PR). CR was defined as disappearance of all target lesions, any pathological lymph nodes (LN) must be  $< 10$  millimeter (mm) in the short axis. PR was defined as at least a 30% decrease in the sum of the diameters of target lesions, taking as a reference, the baseline sum of the diameters. Phase 1b: The safety population included all participants who received any dose of the study drugs. Phase 2: The ITT population included all participants who were randomized into the study. Only those participants with response are reported. As pre-specified in SAP, efficacy results for phase 1b were performed by "treatment group" for Phase 1b which refers to 1) Tazemetostat + Enzalutamide and 2) Tazemetostat + Abiraterone/Prednisone regardless of dose level, hence pooled data for Phase 1b is presented.

End point type	Secondary
----------------	-----------

**End point timeframe:**

Tumor assessments performed at screening (within 4 weeks of randomization) and every 8 weeks for first 6 months and then every 12 weeks thereafter, until death, PD, unacceptable toxicity, consent withdrawal, or termination of study. Approximately 259 weeks

End point values	Phase 1b: Tazemetostat + Enzalutamide	Phase 1b: Tazemetostat + Abiraterone/pr ednisone	Phase 2: Tazemetostat 1200 mg + Enzalutamide	Phase 2: Enzalutamide

End point title	Phase 2: Change From Baseline in Functional Assessment of Cancer Therapy-Prostrate (FACT-P): Functional Wellbeing Subscale (FWB) and Prostate Cancer Subscale (PCS) Scores <sup>[15]</sup>
-----------------	--

End point description:

FACT-P questionnaire included subscales: physical well-being (PWB) (Questions [Q] GP1 to GP7), social/family well-being subscale (SWB) (Q GS1 to GS7), emotional well-being subscale (EWB) (Q GE1 to GE6), functional well-being subscale (FWB) (Q GF1 to GF7) & prostate cancer subscale (PCS) (Q C2, C6, P1 to P8, BL2 and BL5). Each question had 5 responses, 0: "not at all", 1: "a little bit", 2: "somewhat", 3: "quite a bit" & 4: "very much". Scores ranged: 0 ("not at all") to 4 ("very much") for positively phrased questions. Negatively phrased questions had reverse scoring, from 0 ("very much") to 4 ("not at all"). Q that were reversed (via subtraction of response from 4) were: GP1-7, GE1, GE3-6, C2, P1-3, P6-P8 & BL2. Total FACT-P score: sum of scores of all sub-scales (PWB, SWB, EWB, FWB & PCS). Higher scores: better quality of life. Baseline: last value recorded for variable prior to or on date of randomization. "99999": not estimable for 1 participant. "99999": no participants analyzed. Participants discontinued as they progressed in study.

## Statistical analyses

No statistical analyses for this end point

## Secondary: Phase 2: Time to Definitive Deterioration (TDD) in Prostate Symptoms as Assessed by the Functional Assessment of Cancer Therapy-Prostrate: Prostate Cancer Subscale Score

End point title	Phase 2: Time to Definitive Deterioration (TDD) in Prostate Symptoms as Assessed by the Functional Assessment of Cancer Therapy-Prostrate: Prostate Cancer Subscale Score <sup>[16]</sup>
-----------------	---

### End point description:

TTD: interval from date of randomization until date of first clinically meaningful deterioration (3 points or more decline for subscale score, 10 points or more decline for total score) that was confirmed at subsequent visit at least 3 weeks apart with no improvement in between visits or death (by any cause) in absence of a clinically meaningful deterioration, regardless of whether participant discontinued study drug(s) prior to deterioration. PCS included Q C2, C6, P1 to P8, BL2 and BL5. Each question had 5 responses, 0: "not at all", 1: "a little bit", 2: "somewhat", 3: "quite a bit" and 4: "very much". Scores ranged: 0 ("not at all") to 4 ("very much") for positively phrased Q. Negatively phrased Q: reverse scoring, from 0 ("very much") to 4 ("not at all"). Total FACT-P: sum of scores of all subscales (PWB, SWB, EWB, FWB and PCS). Higher scores: better quality of life. TDD in prostate symptoms as assessed by FACT-P: PCS score is presented. "99999": not estimable due to insufficient participants with events.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline (Day 1) up to Cycle 24 Day 1261

Notes:

[16] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The endpoint was evaluated for only Phase 2 arms.

<b>End point values</b>	Phase 2: Tazemetostat 1200 mg + Enzalutamide	Phase 2: Enzalutamide		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	16	21		
Units: months				
median (confidence interval 95%)	11.2 (3.9 to 9999)	3.7 (2.5 to 11.1)		

## Statistical analyses

No statistical analyses for this end point

## Adverse events

### Adverse events information

Timeframe for reporting adverse events:

TEAEs: first dose of study drug (Day 1) up to either 30 days after last dose or until initiation of subsequent anticancer therapy or end of treatment. Up to 149 and 191 weeks for Phases 1b and 2 respectively. Deaths: From Day 1 up to approximately 259 weeks.

Adverse event reporting additional description:

The safety population included all participants who received any dose of the study drugs.

Assessment type	Systematic

### Reporting groups

Reporting group title	Phase 1b: Tazemetostat 400 mg + Enzalutamide
-----------------------	--

Reporting group description:

Participants received tazemetostat 400 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 1b: Tazemetostat 600 mg + Enzalutamide
-----------------------	--

Reporting group description:

Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 2: Enzalutamide
-----------------------	-----------------------

Reporting group description:

Participants received enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 1b: Tazemetostat 400 mg + Abiraterone/prednisone
-----------------------	--

Reporting group description:

Participants received tazemetostat 400 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 1b: Tazemetostat 600 mg + Abiraterone/prednisone
-----------------------	--

Reporting group description:

Participants received tazemetostat 600 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 1b: Tazemetostat 800 mg + Abiraterone/prednisone
-----------------------	--

Reporting group description:

Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and abiraterone 1000 mg tablet orally OD/prednisone 5 mg tablet orally BID from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 2: Tazemetostat 1200 mg + Enzalutamide
-----------------------	--

Reporting group description:

Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 1b: Tazemetostat 1200 mg + Enzalutamide
-----------------------	---

Reporting group description:

Participants received tazemetostat 1200 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity,

withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

Reporting group title	Phase 1b: Tazemetostat 800 mg + Enzalutamide
Reporting group description:	
Participants received tazemetostat 800 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.	
Reporting group title	Phase 1b: Tazemetostat 1600 mg + Enzalutamide
Reporting group description:	
Participants received tazemetostat 1600 mg tablet orally BID from Cycle 1 Day 2 and enzalutamide 160 mg capsule orally OD from Cycle 1 Day 1 until death, PD, development of unacceptable toxicity, withdrawal of consent, or termination of the study. Each cycle duration was 28 days.

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
29 July 2019	The potential dose level of tazemetostat was increased up to 1600 mg BID when given in combination with enzalutamide. Addition of death of any cause as an event in the definition of the rPFS endpoint and an assessment of the PK of enzalutamide and abiraterone/prednisone when administered in combination with tazemetostat. Participants with human immunodeficiency virus (HIV) or hepatitis who met specific criteria for immune function and HIV or hepatitis treatment were included. Criteria for dose-limiting toxicities (DLTs) was adjusted. The tazemetostat dose modification levels for combination treatment-related toxicities when administered with abiraterone/prednisone was corrected.
10 January 2020	The abiraterone/prednisone arm in the phase 2 portion of the study was removed. Clarifications provided regarding participants treated in phase Ib and AEs collection procedures. The location for the phase Ib portion of the study was expanded from the United States to global. Clinical experience information and the anticipated tazemetostat safety profile updated. Secondary objectives pertaining to CTCs, inclusion and exclusion criteria refined and exploratory objectives were expanded. Dose reduction amounts were modified for abiraterone-related toxicity to align with the package insert and clarified dose reduction procedures for tazemetostat. Instructions and guidance added for dosing in case of vomiting investigational drug and for the treatment of overdose and clarified permitted concomitant medications. Mandatory paired pre- and post-treatment biopsies were added for the additional participants to be enrolled at the RP2D in the phase 1 portion and allowed baseline biopsies from archival tumour sample if the sample was obtained less than 1 year before enrolment. PK sampling removed at 10 and 12 hours post-dose and deleted the CTC sample collection at Cycle 6. An optional chest ultrasound at screening and every 8 weeks at the investigator's discretion and an annual blood sample for PK assessment for tazemetostat-treated participants added. Corrections made in the errors in the schedule of assessments, names and roles of safety committees and removed erroneously stated plans for an independent data monitoring committee. Analysis procedure and wording of record retention requirements revised.
05 June 2020	Since the original protocol was written, the sponsor had completed aggregate analysis of cumulative safety data for two New Drug Application submissions in the US and their subsequent safety updates. These analyses were supplemented by data from participants enrolled in 5 different dose-escalation cohort levels in the EZH-1101 trial with no observed DLTs. A review of cumulative safety data demonstrates a stable AE profile of tazemetostat managed by dose interruption and, uncommonly, by dose reduction or discontinuation. Based on this data, the sponsor reassessed the need for the additional number of participants considered for this study. Accordingly, the modified 3 + 3 dose-escalation design had been adjusted such that the RP2D could be determined based on the first three participants treated at any dose level if no DLTs occurred among them, without an additional three participants for added safety and PK information. Cohort expansion occurred only if a DLT was observed at any given cohort level. The availability of PK data in this study was adequate to characterize the PK of tazemetostat in the combination setting without additional participants (to a total of 12 at the RP2D) in the phase Ib portion of the study; the addition of these participants, therefore, was removed. The annual PK assessment that had been required for participants receiving tazemetostat was removed. The current information was updated on the medications to be used with caution and prohibited medications. A whole blood sample was added for potential genotype analysis at the 30-day follow-up visit to correct an oversight. Simplified, updated and applied consistency with other Epizyme documents and industry standards in safety reporting definitions, management and instructions.

27 December 2020	Declared the RP2D of tazemetostat when given in combination with enzalutamide. The total number of participants planned in the phase II randomized component of the study was increased from 32 per arm to 40 per arm (a total increase of 16 participants) in order to achieve 80% power and account for a 10% dropout rate; a critical boundary was also added. Reflection of the prevalence of measurable disease in the population (approximately 60%) was achieved by capping the enrolment of participants without measurable disease at 15 participants per treatment arm, as necessary. Updated to require tumour biopsies, when safe and feasible, from 12-20 participants randomized to receive tazemetostat plus enzalutamide in the phase II portion of the study. Included additional health-related quality of life measures. PK sample collection time points adjusted in phase 2 to coincide with efficacy assessments. Language to clarify safety/adverse event of special interest definitions adjusted. An exploratory objective was added.
14 April 2022	The name of the responsible medical officer and contact information in case of emergency was updated. The cap of 15 participants per treatment group without measurable disease in phase 2 was removed. Adjusted the phase 2 study duration from approximately 30 months to approximately 38 months and the estimated date of last participant completion from August 2023 to February 2024 and the timeframe for participants who discontinued treatment for reasons other than confirmed radiographic progression from up to 2 years post last dose to up to 18 months post last dose. Follow-up procedures and pregnancy prevention wording for participants' partners who were females of childbearing potential revised. PK sample collection was specified in phase 2. Added that Epizyme would request available archival tumour samples from all participants who did not provide matched biopsies at screening, to allow randomization of phase 2 participants to occur before Cycle 1 Day 1. Any second-generation androgen targeted agents as a class in phase 2 was excluded. Herbal remedies from the list of prohibited concomitant medications and the 400 mg formulation of tazemetostat from the list of available formulations was removed. The order of presentation was adjusted and additional details clarification was provided concerning secondary and exploratory endpoint definitions and planned statistical analyses. Clarification provided for the detection of myeloid malignancies in study participants. Safety information was updated to align with the current Investigator's Brochure (IB). Serum chromogranin A assessment at screening and to include a section on the future use of biosamples was removed.
31 August 2022	Background and clinical information regarding tazemetostat was updated to align with the updated tazemetostat IB (IB v12.0). The requirement of scans for confirmation of progression in soft tissue at Week 9 based on RECIST 1.1 criteria was removed. The list of responsible personnel and emergency contact information was updated. Internal conflict errors introduced in Protocol Amendment #5 was corrected and concomitant medication and supplement advice was clarified.

Notes:

## Interruptions (globally)

Were there any global interruptions to the trial? No

## Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

The study was terminated early as Sponsor decided to discontinue the development of tazemetostat in mCRPC and the primary endpoint was not met for this study. There were no safety concerns.
