Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-001119-PIP02-12
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	Yes

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	17 August 2023
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	17 August 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate whether lenvatinib in combination with ifosfamide and etoposide (Arm A) was superior to ifosfamide and etoposide alone (Arm B) in improving PFS based on IIR assessments (hereafter referred to as "per IIR") using Response Evaluation Criteria in Solid Tumors (RECIST) 1.1, in children, adolescents, and young adults with relapsed or refractory osteosarcoma.

Protection of trial subjects:

This study was conducted in accordance with standard operating procedures (SOPs) of the sponsor (or designee), which are designed to ensure adherence to Good Clinical Practice (GCP) guidelines as required by the following: - Principles of the World Medical Association Declaration of Helsinki (World Medical Association, 2008) - International Council on Harmonisation (ICH) E6 Guideline for GCP (CPMP/ICH/135/95) of the European Agency for the Evaluation of Medicinal Products, Committee for Proprietary Medicinal Products, International Council for Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use - Title 21 of the United States (US) Code of Federal Regulations (US 21 CFR) regarding clinical studies, including Part 50 and Part 56 concerning informed subject consent and Institutional Review Board (IRB) regulations and applicable sections of US 21 CFR Part 312 - European Good Clinical Practice Directive 2005/28/EC and Clinical Trial Directive 2001/20/EC for studies conducted within any European Union (EU) country. All suspected unexpected serious adverse reactions were reported, as required, to the Competent Authorities of all involved EU member states. - Article 14, Paragraph 3, and Article 80-2 of the Pharmaceutical Affairs Law (Law No. 145, 1960) for studies conducted in Japan, in addition to Japan's GCP Subject Information and Informed Consent.

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	13
Adolescents (12-17 years)	47
Adults (18-64 years)	21
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Subjects took part in the study at 84 investigative sites in Austria, Australia, Belgium, Hong Kong, Korea, New Zealand, Singapore, Taiwan, Czech Republic, Finland, France, Israel, Ireland, Italy, Netherlands, Spain, Sweden, Switzerland, United Kingdom, Canada, and the United States.

Pre-assignment

Screening details:

A total of 99 subjects were screened, 18 failed screening. 81 subjects were enrolled and randomized, out of which 78 received the study treatment.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Treatment Arm A: Lenvatinib + Ifosfamide + Etoposide

Arm description:

Subjects received lenvatinib 14 milligrams per square meter (mg/m^2), capsules, orally, once daily, plus ifosfamide 3000 milligrams per square meter per day ($\text{mg}/\text{m}^2/\text{day}$), intravenously and etoposide 100 $\text{mg}/\text{m}^2/\text{day}$, intravenously. Ifosfamide and etoposide were administered on Days 1 to 3 of each 21-day cycle for up to 5 cycles. Lenvatinib was administered in continuous 21-day cycles. Treatment continued until disease progression (PD), development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first.

Arm type	Experimental
Investigational medicinal product name	Lenvatinib
Investigational medicinal product code	
Other name	E7080
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Subjects received lenvatinib 14 mg/m^2 , capsules, orally, once daily in continuous 21-day cycles until PD, development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received etoposide 100 $\text{mg}/\text{m}^2/\text{day}$, intravenously on Days 1 to 3 of each 21-day cycle for up to 5 cycles.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received ifosfamide 3000 $\text{mg}/\text{m}^2/\text{day}$, intravenously on Days 1 to 3 of each 21-day cycle for up to 5 cycles.

Arm title	Treatment Arm B: Ifosfamide + Etoposide
Arm description: Subjects received ifosfamide 3000 mg/m ² /day, intravenously and etoposide 100 mg/m ² /day, intravenously on Days 1 to 3 of each 21-day cycle for up to 5 cycles. Subjects who had PD per RECIST version (v) 1.1 were eligible for an optional lenvatinib treatment (14 mg/m ² , capsules, orally, once daily in continuous 21-day cycles until next PD, development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first) plus any remaining cycles of chemotherapy if 5 cycles were not completed prior to PD.	
Arm type	Active comparator
Investigational medicinal product name	Lenvatinib
Investigational medicinal product code	
Other name	E7080
Pharmaceutical forms	Capsule, hard
Routes of administration	Oral use

Dosage and administration details:

Subjects who had PD per RECIST v1.1 were eligible for an optional lenvatinib treatment 14 mg/m², capsules, orally, once daily in continuous 21-day cycles until next PD, development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first plus any remaining cycles of chemotherapy if 5 cycles were not completed prior to PD.

Investigational medicinal product name	Ifosfamide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received ifosfamide 3000 mg/m²/day, intravenously on Days 1 to 3 of each 21-day cycle for up to 5 cycles.

Investigational medicinal product name	Etoposide
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Subjects received etoposide 100 mg/m²/day, intravenously on Days 1 to 3 of each 21-day cycle for up to 5 cycles.

Number of subjects in period 1	Treatment Arm A: Lenvatinib + Ifosfamide + Etoposide	Treatment Arm B: Ifosfamide + Etoposide
Started	40	41
Treated (Safety Analysis Set)	39	39
Optional Lenvatinib (Arm B only)	0	16
Completed	0	0
Not completed	40	41
Consent withdrawn by subject	4	6
Death	25	25
Other	11	10

Subject analysis set title	Subjects from Treatment Arm A and B: Lenvatinib Suspension
----------------------------	--

Subject analysis set type	Sub-group analysis
---------------------------	--------------------

Subject analysis set description:

Subjects who were unable to swallow capsules received lenvatinib as an extemporaneous suspension prepared from the capsule. Subjects received lenvatinib 14 mg/m² once daily in continuous 21-day cycles until PD, development of unacceptable toxicity, subject request, withdrawal of consent, or discontinuation of study by the sponsor.

Primary: Progression-free Survival (PFS) by Independent Imaging Review (IIR) Assessment

End point title	Progression-free Survival (PFS) by Independent Imaging Review (IIR) Assessment
-----------------	--

End point description:

PFS as assessed by IIR was defined as the time from the date of randomization to the date of the first documentation of PD or date of death (whichever occurred first), as determined using RECIST v1.1. PD was defined as at least a 20 percent (%) increase or 5 millimeter (mm) increase in the sum of diameters of target lesions (taking as reference the smallest sum on study) recorded since the treatment started or the appearance of 1 or more new lesions. PFS was analyzed using Kaplan-Meier method. FAS included all randomized subjects regardless of the treatment actually received.

End point type	Primary
----------------	---------

End point timeframe:

From the date of randomization to the date of the first documentation of PD or date of death, whichever occurred first (up to 20.5 months)

Secondary: Treatment Arm A: Plasma Concentration of Lenvatinib

End point title	Treatment Arm A: Plasma Concentration of Lenvatinib ^[8]
-----------------	--

End point description:

Plasma concentration of lenvatinib in subjects from Treatment Arm A (Lenvatinib + Ifosfamide + Etoposide) at different time points were reported. As planned, data for this endpoint was analyzed for treatment arm A only. Lenvatinib concentration in plasma was quantified using a validated liquid chromatography tandem mass spectrometry (LC-MS/MS) method. Population Pharmacokinetic (PK) Analysis Set included those subjects who received at least 1 dose of lenvatinib and had documented dose administration history and measurable plasma concentrations of lenvatinib. Here "number of subjects analyzed" signifies subjects who were evaluable for this endpoint. Here "n" signifies subjects who were evaluable for this endpoint at given time points.

End point type	Secondary
----------------	-----------

End point timeframe:

Cycle 1 Day 1: 0.5-4 hours and 6-10 hours post-dose; Cycle 1 Day 15: Pre-dose, 0.5-4 hours and 6-10 hours post-dose; Cycle 2 Day 1: Pre-dose (each Cycle length = 21 days)

Notes:

[8] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: This endpoint was planned for treatment Arm A only.

End point values	Treatment Arm A: Lenvatinib + Ifosfamide + Etoposide			
Subject group type	Reporting group			
Number of subjects analysed	37			
Units: nanograms per milliliter (ng/mL)				
arithmetic mean (standard deviation)				
Cycle 1, Day 1: 0.5-4 hours post-dose (n=37)	147.9 (± 194.61)			
Cycle 1, Day 1: 6-10 hours post-dose (n=35)	217.8 (± 99.54)			
Cycle 1, Day 15: Pre-dose (n=36)	70.7 (± 43.48)			
Cycle 1, Day 15: 0.5-4 hours post-dose (n=37)	222.3 (± 203.07)			
Cycle 1, Day 15: 6-10 hours post-dose (n=35)	310.9 (± 106.79)			
Cycle 2, Day 1: Pre-dose (n=37)	70.2 (± 67.95)

Secondary: Change From Baseline in PedsQL Scale: Cancer Module Scale Score at Month 4

End point title	Change From Baseline in PedsQL Scale: Cancer Module Scale Score at Month 4
End point description: HRQoL: PedsQL 3.0 Cancer Module Scale measured pediatric cancer-specific HRQoL. It included assessment of 8 dimensions: pain and hurt (2 items), nausea (5 items), procedural anxiety (3 items), treatment anxiety (3 items), worry (3 items), cognitive problems (3 items - toddlers [aged 2-4], 4 items - young children [aged 5-7]; 5 items for children aged ≥ 8 years, adults), perceived physical appearance (3 items), communication (3 items). Each item was reported using a 5-point Likert scale, items were then reverse-scored and linearly transformed to a 0 to 100 scale. Cancer Module total score: sum of all items divided by the number of items answered on all the scales. Total score ranges from 0 to 100, where higher scores=better HRQoL, lower scores=worse HRQoL. HRQoL Analysis Set included all subjects who had received at least 1 dose of study drug and had completed at least 1 postbaseline PRO assessment. "Number of subjects analyzed" signifies subjects who were evaluable for this endpoint.	
End point type	Secondary

Secondary: Number of Subjects Categorized Based on Overall Palatability and Acceptability Questionnaire Responses for Suspension of Lenvatinib

End point title	Number of Subjects Categorized Based on Overall Palatability and Acceptability Questionnaire Responses for Suspension of Lenvatinib
-----------------	---

End point description:

Palatability and acceptability of lenvatinib oral suspension formulation was assessed using the Palatability Questionnaire. In questionnaire, subjects were asked to answer palatability and acceptability of lenvatinib suspension considering elements: taste, appearance, smell, how does it feel in the mouth and overall acceptability in terms of 7 responses: Super good, really good, good, may be good or may be bad, bad, really bad, super bad. In this endpoint, number of subjects were reported per their overall palatability and acceptability responses. Palatability and acceptability analysis set included all subjects who received oral suspension of lenvatinib in Treatment Arm A and who received an optional lenvatinib suspension in Treatment Arm B and who answered at least 1 question in palatability questionnaire. As planned, combined data for Lenvatinib from Treatment Arm A and B was reported for this endpoint. "Number of subjects analyzed" signifies subjects evaluable for this endpoint.

End point type	Secondary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

From first dose up to 30 days after the last dose of study drug (up to 40.8 months)

Adverse event reporting additional description:

Treatment Arm B safety data for Ifosfamide + Etoposide to Lenvatinib (optional) were reported separately. Deaths in Subject Disposition module versus Adverse Events module are different because deaths in Subject Disposition module are based on Full Analysis Set while deaths in Adverse Events module based on Safety Analysis Set.

Assessment type	Systematic

Reporting groups

Reporting group title	Treatment Arm A: Lenvatinib + Ifosfamide + Etoposide
-----------------------	--

Reporting group description:

Subjects received lenvatinib 14 mg/m², capsules, orally, once daily, plus ifosfamide 3000 mg/m²/day, intravenously and etoposide 100 mg/m²/day, intravenously. Ifosfamide and etoposide were administered on Days 1 to 3 of each 21-day cycle for up to 5 cycles. Lenvatinib was administered in continuous 21-day cycles. Treatment continued until PD, development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first.

Reporting group title	Treatment Arm B: Ifosfamide + Etoposide
-----------------------	---

Reporting group description:

Subjects received ifosfamide 3000 mg/m²/day, intravenously and etoposide 100 mg/m²/day, intravenously on Days 1 to 3 of each 21-day cycle for up to 5 cycles. Subjects who had PD per RECIST v1.1 were eligible for an optional lenvatinib treatment (14 mg/m², capsules, orally, once daily in continuous 21-day cycles until next PD, development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first) plus any remaining cycles of chemotherapy if 5 cycles were not completed prior to PD.

Reporting group title	Treatment Arm B: Ifosfamide+Etoposide to Lenvatinib (Optional)
-----------------------	--

Reporting group description:

Eligible subjects from Treatment Arm B: Ifosfamide+Etoposide who had PD per RECIST v1.1 received an optional lenvatinib treatment (14 mg/m², capsules, orally, once daily in continuous 21-day cycles until next PD, development of unacceptable toxicity, subject choice, withdrawal of consent or discontinuation of study by the sponsor, whichever occurred first) plus any remaining cycles of chemotherapy if 5 cycles were not completed prior to PD.

Serious adverse events	Treatment Arm A: Lenvatinib + Ifosfamide + Etoposide	Treatment Arm B: Ifosfamide + Etoposide	Treatment Arm B: Ifosfamide+Etoposide to Lenvatinib (Optional)

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
09 March 2020	Amendment 01: <ul style="list-style-type: none">Revised definition of adequacy of bone marrow function in inclusion criterion no. 7 Per health authority request, added exclusion criterion no. 20 on contraindication to study drugsPer health authority request, subjects who received other anticancer therapy, except as specified in the protocol, were required to discontinue study treatmentOptional pharmacodynamic blood sample collection moved from C1D8 to C1D15 to lessen subject burden.
10 September 2020	Amendment 02: <ul style="list-style-type: none">Revised primary objective and endpoint to PFS, and revised PFS rate at 4 months (PFS-4m) to be a secondary objective and endpoint; analyses updated accordinglyAdded ORR as a secondary objective and endpointAdded Exploratory objective and analysis of the difference in lesion removal between the 2 study armsUpdated and clarified definition for the Randomization PhaseClarified tumor assessment requirements at the Off- Treatment visit and during Follow-upAdded option for subjects in Arm B to cross over to treatment with lenvatinib in Arm A, provided certain eligibility criteria were metUpdated inclusion criteria nos. 2, 3, 8, 11 and 13 and exclusion criteria nos. 17 and 19Added inclusion criterion no. 14: Prior treatment with lenvatinib was not permittedPK and pharmacodynamic assessments updated per health authoritiesObjectives and Endpoints were updated to specify review based on independent and investigator assessmentAdded dental examinations to the study assessmentsAdded sections for the management of fistula formation, GI perforation, and QT prolongation.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
