

Clinical trial results:

An Open-label, non-Comparative Study to Evaluate the Steady-State Pharmacokinetics, Safety, and Efficacy of Mexiletine in Adolescents and Children with Myotonic Disorders

Summary

EudraCT number	2019-003757-28
Trial protocol	FR
Global end of trial date	13 June 2024

Results information

Result version number	v1 (current)
This version publication date	25 December 2024
First version publication date	25 December 2024

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	Yes
EMA paediatric investigation plan number(s)	EMA-002012-PIP01-16
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 October 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	13 June 2024
Global end of trial reached?	Yes
Global end of trial date	13 June 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Primary

- To evaluate the safety of mexiletine in adolescents (aged 12 to <18 years) and children (aged 6 to <12 years) for the treatment of myotonia
- To evaluate the efficacy of mexiletine for the treatment of myotonia

Secondary

- To evaluate the efficacy of mexiletine for the treatment of myotonia as assessed by patient-reported outcomes
- To evaluate efficacy and tolerability of mexiletine as measured by Clinical Global Impression (CGI) scale indices
- To determine changes in health-related quality-of-life as measured by the PedsQL Quality of Life and Neuromuscular module.
- To determine the steady-state pharmacokinetics (PK) of mexiletine in children (6 to <12 years) and adolescents (aged 12 to <18 years)
- To assess the acceptability of the capsule formulation.
- Palatability of alternative administration (capsule content with milk/juice or sprinkled on food) by 5-point facial hedonic

Protection of trial subjects:

The nature and purpose of the study was fully explained to each patient (or their legally responsible guardian). Before each patient was enrolled into the study, informed consent was obtained from the patient (or his/ her legally authorized representative) according to the most current applicable regulatory and legal requirements. The consent was obtained on the IEC approved and most recent version of consent form in language best comprehended by the patient.

This study was conducted in compliance with the protocol and with the International Council for Harmonisation of Technical Requirements for Pharmaceuticals for Human Use (ICH), the World Medical Association Declaration of Helsinki (2013) and in compliance to the specific local regulatory requirements wherever applicable and required. The study was conducted according to Good Clinical Practice (GCP) principles as required by Directive 2001/20/EC, as amended.

Subject Confidentiality requirements as stated in the Data Protection legislation

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	03 September 2021
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy, Ethical reason, Regulatory reason, Scientific research
Long term follow-up duration	22 Months
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	France: 12
Worldwide total number of subjects	12
EEA total number of subjects	12

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	5
Adolescents (12-17 years)	7
Adults (18-64 years)	0
From 65 to 84 years	0
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

The study was conducted at 2 sites in France.

Pre-assignment

Screening details:

The study comprised a screening period of 30 days. A total of 12 subjects were enrolled in the study treatment.

Period 1

Period 1 title	Baseline
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1

Arm description:

Patients aged 12 to < 18 years.

Arm type	Experimental
Investigational medicinal product name	Namuscla (mexiletine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Namuscla (mexiletine) was started as a once-a-day (QD) treatment regimen (weeks 1 to 2), and the dose was escalated every 2 weeks as per investigator judgement (twice daily; BID at Day 14, and thrice daily; TID at Day 28) as per body weight of the patient.

Dose selection was based on body weight.

Arm title	Cohort 2
------------------	----------

Arm description:

Patients aged 6 to < 12 years.

Arm type	Experimental
Investigational medicinal product name	Namuscla (mexiletine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Namuscla (mexiletine) was started as a once-a-day (QD) treatment regimen (weeks 1 to 2), and the dose was escalated every 2 weeks as per investigator judgement (twice daily; BID at Day 14, and thrice daily; TID at Day 28) as per body weight of the patient.

Dose selection was based on body weight.

Number of subjects in period 1	Cohort 1	Cohort 2
Started	7	5
Completed	7	5

Period 2

Period 2 title	Treatment period
Is this the baseline period?	No
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort 1

Arm description:

Patients aged 12 to < 18 years.

Arm type	Experimental
Investigational medicinal product name	Namuscla (mexiletine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Namuscla (mexiletine) was started as a once-a-day (QD) treatment regimen (weeks 1 to 2), and the dose was escalated every 2 weeks as per investigator judgement (twice daily; BID at Day 14, and thrice daily; TID at Day 28) as per body weight of the patient.

Dose selection was based on body weight.

Arm title	Cohort 2
------------------	----------

Arm description:

Patients aged 6 to < 12 years.

Arm type	Experimental
Investigational medicinal product name	Namuscla (mexiletine)
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

Namuscla (mexiletine) was started as a once-a-day (QD) treatment regimen (weeks 1 to 2), and the dose was escalated every 2 weeks as per investigator judgement (twice daily; BID at Day 14, and thrice daily; TID at Day 28) as per body weight of the patient.

Dose selection was based on body weight.

Primary: Number and frequency of serious adverse events

End point title	Number and frequency of serious adverse events ^[2]
End point description:	

A SAE is defined as, any untoward medical occurrence that at any dose:

- Results in death.
- Is life-threatening (defined as a participant at immediate risk of death at the time of the event). It does not include an event that, had it occurred in a more severe form, might have caused death.
- Requires in-patient hospitalization or prolongation of existing hospitalization
- Results in persistent or significant disability/ incapacity.
- Is a congenital anomaly/ birth defect.
- Consists of any other medically important condition.

End point type	Primary
End point timeframe:	
Throughout the study while on treatment with Namuscla

Statistical analyses

No statistical analyses for this end point

Primary: Number of adverse events (AEs)

End point title	Number of adverse events (AEs) ^[9]
-----------------	---

End point description:

An AE is defined as any untoward medical occurrence in a patient or clinical investigation patient administered a pharmaceutical product and which does not necessarily have a causal relationship with this treatment. An AE can, therefore, be any unfavourable and unintended sign, symptom or disease (including intercurrent illness), deterioration of a pre-existing illness, accident, any suspected drug reaction, or a clinically relevant change of laboratory values temporally associated with the use of a medicinal (investigation) product, whether or not related to the medicinal (investigational) product and/or study treatment.

A treatment emergent AE (TEAE) will be defined as an AE that begins or that worsens in severity after at least one dose of study drug has been administered.

Statistical analyses

No statistical analyses for this end point

Secondary: Steady-state pharmacokinetic

End point title	Steady-state pharmacokinetic
-----------------	------------------------------

End point description:

PK population.

C_{max}-ss (peak concentrations during the dosing interval at steady-state) and AUC₀-tau (area under the concentration time curve for one dosing interval at steady-state) are determined in µg/L.

If mean is equal to 0, it means results were not evaluable. The average arithmetic is presented.

Results are presented by total daily dose :

- 186 (62 mg 1 capsule 3 times per day)
- 248 (2 capsules of 62 mg twice a day)
- 249 (83 mg 1 capsule 3 times per day)
- 334 (167 mg 1 capsule twice a day)
- 372 (2 capsules of 62 mg 3 times a day)
- 501 (167 mg 1 capsule 3 times per day)

End point type	Secondary
----------------	-----------

End point timeframe:

At day 42

End point values	Cohort 1	Cohort 2

Notes:

[12] - PK results have been determined for 2 subjects in the total daily dose 248 & 501 ; 1 for 186 & 362.

[13] - PK results have been determined for 3 subjects in the total daily dose 186 ; 2 for 249.
