Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	12 July 2022
Is this the analysis of the primary completion data?	Yes
Primary completion date	04 October 2021
Global end of trial reached?	Yes
Global end of trial date	30 November 2021
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of EDP-305 compared to placebo on liver histology in non-cirrhotic NASH subjects with stage 2 or 3 fibrosis.

NOTE:

The pre-planned first interim analysis of a subjects through Week 12 provided meaningful information on dose selection and characterization for the compound. Enanta made a business decision to prioritize combination approaches for further development of the EDP-305. Therefore, this study on monotherapy was discontinued.

Protection of trial subjects:

Independent Ethics Committee or Institutional Review Board:

Written approval of the protocol, the final informed consent document, relevant supporting material and subject recruitment information was obtained from the independent ethics committee (IEC)/institutional review board (IRB) prior to study initiation.

Ethical Conduct of the Study:

This study was conducted in accordance with current applicable regulations, International Conference on Harmonisation (ICH) guidelines, and local legal requirements. It complies with the ethical principles described in the 18th World Medical Assembly (Helsinki 1964) and amendments of the 29th (Tokyo 1975), 35th (Venice 1983), the 41st (Hong Kong 1989) and the 48th (South Africa 1996) World Medical Assemblies, Declaration of Helsinki

Subject Information and Consent:

Informed consent was obtained from each subject before the subject was admitted to the study. The Investigator did not undertake any investigation specifically required for the clinical study until valid consent had been obtained. The terms of the consent and the date and time of day when it was obtained were documented in the case report form (CRF). The consent form, with the date and time of day when it was signed, was retained by the Investigator as part of the study records. A copy of the signed informed consent form (ICF) was given to the subject.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	27 January 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 3
Country: Number of subjects enrolled	United States: 92
Country: Number of subjects enrolled	Argentina: 1
Country: Number of subjects enrolled	Canada: 1
Worldwide total number of subjects	97
EEA total number of subjects	0

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	76
From 65 to 84 years	21
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

Male and female subjects with liver biopsy proven NASH between the ages of 18 and 75 years, inclusive, and with a NAS of 4 or greater with a score of at least 1 in each component of the NAS (steatosis scored 0-3, lobular inflammation scored 0-3, ballooning scored 0-2) and fibrosis stage 2 or 3 using the NASH (CRN) Histologic scoring system.

Pre-assignment

Screening details:

Screening assessments were to be conducted within 70 days prior to the first dose of study drug (i.e., Study Days -70 to -1). They were to be performed sequentially as follows: a) medical history and other noninvasive assessments, b) laboratory assessments, c) MRI-PDFF and MRE and, lastly, d) liver biopsy.

Period 1

Period 1 title	Overall Treatment Period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Placebo orally for 72 weeks.

Matching placebo, which was identical in appearance to the test product except that it contained no active ingredient.

Arm type	Placebo
Investigational medicinal product name	Placebo EDP-305
Investigational medicinal product code	EDP-305
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Once a day orally for 72 weeks.

Arm title	EDP-305 1.5 mg
------------------	----------------

Arm description:

EDP-305 1.5 mg orally for 72 weeks (one 0.5 mg tablet and one 1.0 mg tablet).

Arm type	Experimental
Investigational medicinal product name	EDP-305 1.5 mg
Investigational medicinal product code	EDP-305
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral EDP-305 tablets, 1.5 mg administered once daily.

Arm title	EDP-305 2 mg
------------------	--------------

Arm description:

EDP-305 2.0 mg orally for 72 weeks (two 1.0 mg tablets).

Arm type	Experimental
Investigational medicinal product name	EDP-305 2 mg
Investigational medicinal product code	EDP-305
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Oral EDP-305 tablets, 2.0 mg administered once daily.

Number of subjects in period 1	Placebo	EDP-305 1.5 mg	EDP-305 2 mg
Started	32	32	33
Completed	32	32	33

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
28 May 2020	<ul style="list-style-type: none">• Inclusion criterion 11 was updated to make clear that the intention was that antihypertensive subjects would be on a stable antihypertensive regimen during the study.• The following exclusion criteria were revised to the text as given in the CSR to capture the target subject population: exclusion criteria 5, 9, 12, 13, 14, 17, 19, 20, 25, 26. Text in other parts of the CSP were updated as appropriate to reflect changes in the exclusion criteria.• Additional information on concomitant medications was added as follows: Generic substitutions of all stable medications for underlying diseases were allowed during the study. Changing a medication within the same therapeutic class was also permitted during the study. Any subject who initiated a high dose or increased to a higher dose of Vitamin E (≥ 800 IU/day) during the course of the study had to undergo ET procedures (including liver biopsy and imaging if beyond Week 36).• Changes were made to update the NCI CTCAE version and provide clarification around documenting and reporting of AEs.• At home pregnancy tests were added at Weeks 52, 60, and 68 for females of childbearing potential. Due to the 8-week timeframe between clinic visits at Weeks 48, 56, and 72, these at home pregnancy tests were added to confirm subjects did not become pregnant during the extended time between visits. To determine the results of the pregnancy tests, additional phone contacts were added• The number of laboratory tests conducted to assess lipids and cardiovascular risk were reduced. These were no longer deemed necessary based on data readouts from previous studies.
21 March 2021	<p>The screening time was extended from 8 to 10 weeks because additional time was needed to allow more flexibility for completion of all screening procedures in a sequential manner</p> <ul style="list-style-type: none">• The inclusion criteria for MRI-PDFF $\geq 8\%$ and AST >30 IU/L were added to further refine the subject population eligible for study entry and thus increase the probability of resulting in eligible liver biopsy criteria• To avoid unnecessary burden on potential subjects, the inclusion criteria were modified to specify that screening assessments should be performed in a sequential manner and the liver biopsy should only be performed once the subject satisfied all other eligibility criteria• To avoid confusion noted by the sites with regard to the duration of a month (i.e., 28, 30, or 31 days), durations were changed from months to corresponding weeks throughout the CSP• Wording on Screening and use of concomitant medications was clarified with regard to rescreening options for subjects who required a medically necessary dose modification with an existing medication• The schedule of assessments was modified so that for subjects who discontinued between Weeks 10 and 12, the MRI/MRE that would have been conducted at Week 12 was to be conducted at the EOT visit• The wording of ECG requirements was revised to clarify ECG repeat requirements because the original language was proving to be confusing to sites. Normal ranges for ECG assessments were provided.• Due to the COVID 19 pandemic, provisions were added to clarify options for rescreening subjects who were affected by COVID 19• Wording regarding the reporting of AEs was revised to simplify the recording requirements for AEs and all AEs collected would be entered into the eCRF• Clarified that DLQI was only to be completed at each in-clinic visit as opposed to all visits• The wording was revised to emphasize the need for reviewing eligibility criteria and detailing the definition of women childbearing potential.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? Yes

Date	Interruption	Restart date
04 October 2021	Enanta Pharmaceuticals, Inc. made the strategic decision to discontinue the ARGON-2 study to prioritize combination treatment approaches. This decision was not based on safety concerns.	-

Notes:

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

No limitations reported for the study.
