Results analysis stage

Analysis stage	Final
Date of interim/final analysis	20 December 2023
Is this the analysis of the primary completion data?	No

Global end of trial reached?	Yes
Global end of trial date	20 December 2023
Was the trial ended prematurely?	Yes

Notes:

General information about the trial

Main objective of the trial:

The main objective of this trial was to evaluate the effect of macitentan 75 milligrams (mg) versus placebo on exercise capacity at Week 28 in subjects with chronic thromboembolic pulmonary hypertension (CTEPH).

Protection of trial subjects:

This study was conducted in accordance with the ethical principles that have their origin in the Declaration of Helsinki and that are consistent with Good Clinical Practice and applicable regulatory requirements.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	23 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Adults (18-64 years)	56
From 65 to 84 years	71
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Study comprised of screening, double-blind (DB), open-label (OL) and safety follow-up (FU) periods. The DB period started with an 8-week up-titration phase and lasted until all subjects either completed the Week 28 visit or prematurely discontinued the study.

Period 1

Period 1 title	DB Period: Day 1 up to EODBT
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator

Blinding implementation details:

Double blind

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Double Blind (DB) Period: Macitentan
------------------	--------------------------------------

Arm description:

During the 8-week up-titration phase, subjects received macitentan doses orally once daily (QD): 10 mg tablet for 4 weeks followed by 37.5 mg tablet for another 4 weeks prior to reaching the target maintenance phase dose of macitentan 75 mg QD. Subjects were to remain on double-blind maintenance treatment until the last subject randomised completed the Week 28 visit. Subjects who prematurely discontinued DB study treatment prior to Week 28 but did not withdraw consent were asked to enter post-treatment observation period (PTOP) from DB period last dose until Week 28. Median exposure to DB treatment was 24.50 weeks (minimum: 3.9 weeks; maximum: 160.4 weeks).

Arm type	Experimental
Investigational medicinal product name	Macitentan
Investigational medicinal product code	ACT-064992
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received macitentan 10 mg QD for 4 weeks followed by macitentan 37.5 mg QD for another 4 weeks during the up-titration phase, prior to reaching the target maintenance dose of macitentan 75 mg QD. Subject remained on DB maintenance treatment until the last subject randomised completed the Week 28 visit.

Arm title	DB Period: Placebo
------------------	--------------------

Arm description:

Subjects received placebo matched to macitentan dose levels during the DB treatment period. Subjects who prematurely discontinued DB study treatment prior to Week 28 but did not withdraw consent were asked to enter PTOPTOP from DB period last dose until Week 28. Median exposure to DB treatment was 44 weeks (minimum: 4 weeks; maximum: 147.9 weeks).

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects received placebo matched to macitentan dose levels during the DB treatment period.

Number of subjects in period 1	Double Blind (DB) Period: Macitentan	DB Period: Placebo
Started	64	63
Completed	1	1
Not completed	63	62

Period 2

Period 2 title	OL Period:Day 1 upto End of OL Treatment
Is this the baseline period?	No
Allocation method	Non-randomised - controlled
Blinding used	Not blinded

Blinding implementation details:

not applicable

Arms

Are arms mutually exclusive?	Yes
Arm title	Open Label (OL) Period: DB Macitentan

Arm description:

Subjects who were treated with macitentan in the DB period and had reached the target dose of macitentan 75 mg and completed the DB period as per protocol were considered eligible to transition into the 104-week OL period and they continued macitentan 75 mg tablet orally QD from end of double blind treatment (EODBT) until study termination. Subjects who experienced a clinical worsening event confirmed by the clinical event committee (CEC), were allowed to transition to the OL period at any time after Week 28. Median exposure to OL treatment was 72 weeks (minimum: 8.1 weeks; maximum: 84.6 weeks).

Arm type	Experimental
Investigational medicinal product name	Macitentan
Investigational medicinal product code	ACT-064992
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects continued macitentan 75 mg QD from EODBT until study termination.

Arm title	OL Period: DB Placebo
------------------	-----------------------

Arm description:

Subjects who were treated with placebo in the DB period and had completed the DB period as per protocol were considered eligible to transition into the 104-week OL period and were up-titrated to the target dose of macitentan 75 mg (macitentan 10 mg for 4 weeks, followed by macitentan 37.5 mg for another 4 weeks). Subjects who experienced a clinical worsening event confirmed by the CEC, were allowed to transition to the OL period at any time after Week 28. Median exposure to OL treatment was 72 weeks (minimum: 8.1 weeks; maximum: 84.6 weeks).

Arm type	Experimental
Investigational medicinal product name	Macitentan
Investigational medicinal product code	ACT-064992
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Subjects were up-titrated to the target dose of macitentan 75 mg (macitentan 10 mg for 4 weeks, followed by macitentan 37.5 mg for another 4 weeks).

Primary: Change From Baseline in 6-minute Walk Distance (6MWD) at Week 28

End point title	Change From Baseline in 6-minute Walk Distance (6MWD) at Week 28
End point description: Change from baseline in 6MWD as measured by 6-minute walk test (6MWT)) at Week 28 was reported. The purpose of the 6MWT was to quantify exercise tolerance and capacity. This standardized test measured the distance an individual was able to walk over a total of six minutes on a hard, flat surface with no obstacles. The goal was for the individual to walk as far as possible in 6 minutes. Full analysis set (FAS) included all randomised subjects assigned to a study intervention and were analysed according to the intervention they had been assigned to via interactive web response system (IWRS). Here, 'N' (number of subjects analysed) signifies number of subjects evaluable for this end point.

Secondary: Change From Baseline to Week 28 in Pulmonary Arterial Hypertension - Symptoms and Impact (PAH-SYMPACT) - Cardiopulmonary Symptom Domain Score

End point title	Change From Baseline to Week 28 in Pulmonary Arterial Hypertension - Symptoms and Impact (PAH-SYMPACT) - Cardiopulmonary Symptom Domain Score
-----------------	---

End point description:

The cardiopulmonary symptoms domain consisted 6 items: dyspnea, fatigue, lack of energy, swelling in ankles/legs/stomach area and cough, on a scale from 0 no symptom at all) to 4 (very severe symptoms). The symptoms part of the PAH-SYMPACT was administered daily over a 7-day period. The recall period of symptom items was the last 24 hours. An average cardiopulmonary symptoms domain score was determined based on daily scores of the 6 items. The mean individual symptom item score was determined for each of 6 items and domain score was calculated by summing the mean individual symptom item scores, dividing by number of items, ranged from 0=no cardiopulmonary symptoms, 4=severe cardiopulmonary symptoms. Higher score indicated severe symptoms. FAS: all randomised subjects assigned to a study intervention and analysed according to the intervention received via IWRS. Per change in planned analysis, data for this endpoint was not collected and analysed due to study termination.

Statistical analyses

Secondary: Number of Subjects with Improvement in World Health Organisation Functional Class (WHO FC) From Baseline to Week 28

End point title	Number of Subjects with Improvement in World Health Organisation Functional Class (WHO FC) From Baseline to Week 28
-----------------	---

End point description:

Number of subjects with improvement in WHO FC from baseline to Week 28 were reported. Improvement (decrease) in WHO FC from baseline to Week 28 was calculated for each subject. WHO FC test was used to assess disease severity. Four FC were defined from FC I (no limitation of physical activity) to FC IV (inability to carry out any physical activity without symptoms). For analysis purpose, these WHO FC class values were transformed to a scale with scores ranged from 1 to 4; where a score 1 corresponded to WHO FC Class I and a score 4 corresponded to WHO FC Class IV. The higher scores indicated greater symptom severity or worse impact. Improvement was considered when a subject changed from a higher class to a lower class. FAS: all randomised subjects assigned to a study intervention and were analysed according to the intervention they had been assigned to via IWRS. Here, 'N' (number of subjects analysed) signifies number of subjects evaluable for this endpoint.

Secondary: Change From Baseline to Week 28 in Accelerometer-assessed Proportion of Time Spent in Moderate to Vigorous Physical Activity

End point title	Change From Baseline to Week 28 in Accelerometer-assessed Proportion of Time Spent in Moderate to Vigorous Physical Activity
-----------------	--

End point description:

Change from baseline to week 28 in accelerometer-assessed proportion of time spent in moderate to vigorous physical activity were assessed. The daily life physical activity of the subject was assessed using an accelerometer which was provided to the subject at screening and was worn daily during walking hours up to Week 28. For each scheduled visit, the 14 days prior to the visit was considered as the assessment period for physical activity. A complete day was defined as a record of at least 7 waking hours of data. During these periods, the time spent in different level of activity: sedentary/light/moderate/vigorous was determined based on activity counts per minutes and expressed as proportion relative to the period duration. FAS: all randomised subjects assigned to a study intervention and were analysed according to the intervention they had been assigned to via IWRS. Per change in planned analysis, data for this endpoint was not collected and analysed due to study termination.

Secondary: Change from Baseline to Week 28 in Euro Quality of life-5-Dimension-5-Level (EQ-5D-5L) Utility Score

End point title	Change from Baseline to Week 28 in Euro Quality of life-5-Dimension-5-Level (EQ-5D-5L) Utility Score
-----------------	--

End point description:

The EQ-5D-5L was a generic measure of health status, a 5-item questionnaire that assessed 5 domains including mobility, self-care, usual activities, pain/discomfort and anxiety/depression plus a visual analog scale (VAS). Each questionnaire had 5 response levels: 1 =no problems, 2 =slight problems, 3 =moderate problems, 4 =severe problems and 5 =extreme problems. The scores for the 5 questionnaires were used to compute a single utility score ranged from 0 to 1 representing the general health status of the individual. Higher score indicated better health status. FAS included all randomised subjects assigned to a study intervention and were analysed according to the intervention they had been assigned to via IWRS. Per change in planned analysis, data for this endpoint was not collected and analysed due to study termination.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

DB period: DB Day 1 to 30 days post EODBT (median exposure[ME]:24.5 weeks[wks], [min 3.9 wks; max 160.4 wks] on macitentan, ME:44 wks [min 4 wks; max 147.9 wks] on placebo); OL period: OL Day 1 to study termination (ME:72 wks [min 8.1 wks; max 84.6 wks]).

Adverse event reporting additional description:

Safety analysis was based on safety analysis set which included all participants who received at least one dose of study intervention in this study and were analysed according to the intervention they actually received.

Assessment type	Non-systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
22 April 2020	The purpose of this amendment was to ensure that all subjects, for whom standard of care with riociguat was appropriate, received riociguat in the study. Furthermore, information on the ongoing drug-drug interaction (DDI) study with riociguat was provided, and the criteria for concomitant riociguat therapy (in the absence of a clinically relevant DDI) to be permitted without the need for a substantial amendment were defined.
13 July 2020	The purpose of this amendment was to update the exclusion criteria and concomitant therapy sections pertaining to new information regarding a DDI of macitentan 75 mg with moderate dual Cytochrome (CYP)3A4 and CYP2C9 inhibitors or co-administration of a combination of moderate CYP3A4 inhibitors and moderate CYP2C9 inhibitors.
05 August 2020	The purpose of this amendment was to 1. include the changes related to the use of riociguat and the DDI study that were mandated by voluntary harmonisation procedure (VHP), 2. to implement changes due to an urgent safety measure (USM) (that is, exclusion of subjects treated with dual moderate CYP3A4/CYP2C9 inhibitors), 3. to allow the use of subcutaneous (SC) treprostinil as background pulmonary hypertension (PH)-specific therapy, since it had received marketing authorisation in the European Union (EU) in April 2020, 4. to update the statistical section based on European Medicines Agency (EMA) Scientific Advice as well as to make minor updates and corrections and perform editorial document formatting revisions.
15 December 2020	The purpose of this amendment was to modify the study design for increasing the double-blind (DB) follow-up time. This increase in the DB follow-up time improved the statistical power for the key secondary endpoint (time to clinical worsening). Also, a new substudy was added to provide additional safety data of chronic treatment with macitentan on testicular function in patients with pulmonary arterial hypertension (PAH) or chronic thromboembolic pulmonary hypertension (CTEPH). Specific requirements for Japanese sites were added. Minor corrections and editorial revisions were also being implemented.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Limitations of the trial such as small numbers of participants analysed or technical problems leading to unreliable data.
