Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	05 May 2023
Is this the analysis of the primary completion data?	Yes
Primary completion date	08 September 2022
Global end of trial reached?	Yes
Global end of trial date	08 September 2022
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To prove the equivalence of SCD411 as compared with Eylea (aflibercept) in best corrected visual acuity (BCVA) after 8 weeks of treatment among subjects with wet AMD.

Protection of trial subjects:

The study was to be performed in accordance with the ethical principles that had their origin in the Declaration of Helsinki, ICH GCP, the protocol, and all applicable regulations. A written informed consent in compliance with regulatory authority regulations (eg, US Title 21 Code of Federal Regulations Part 50) was to be obtained from each subject before entering the study or performing any unusual or nonroutine procedure that involved risk to the subject. If the ICF was revised during the course of the study, all active participating subjects had to sign the revised form.

Before recruitment and enrollment, each prospective subject was to be given a full explanation of the study and be allowed to read the approved ICF. The investigator was to address all questions raised by the subject. Once the investigator was assured that the subject understood the implications of participating in the study, the subject was to be asked to give consent to participate in the study by signing the ICF. The investigator or designee was to also sign the ICF.

Background therapy:

A total of 317 subjects (55.3%) received at least one prior medication in the study eye, most commonly (>20.0% subjects) anticholinergics (263 subjects [45.9%]) and local anesthetics (144 subjects [25.1%]). A total of 303 subjects (52.9%) received at least one prior medication in the fellow eye, most commonly (>20.0% subjects) anticholinergics (248 subjects [43.3%]) and local anaesthetics (124 subjects [21.6%]). A total of 476 subjects (83.1%) received at least one concomitant medication in the study eye, most commonly (>20.0% subjects) local anesthetics (416 subjects [72.6%]), anticholinergics (288 subjects [50.3%]), fluoroquinolones (263 subjects [45.9%]), and other anti-infectives (236 subjects [41.2%]). A total of 326 subjects (56.9%) received at least one concomitant medication in the fellow eye, most commonly (>20.0% subjects) anticholinergics (227 subjects [39.6%]) and local anesthetics (124 subjects [21.6%]).

A total of 538 subjects (93.9%) received at least one non-ocular prior medication, most commonly (>20.0% subjects) other diagnostic agents (256 subjects [44.7%]), 3-hydroxy-3-methylglutaryl (HMG) coenzyme A (CoA) reductase inhibitors (189 subjects [33.0%]), other viral vaccines (138 subjects [24.1%]), dihydropyridine derivatives (117 subjects [20.4%]), selective beta blocking agents (115 subjects [20.1%]), and platelet aggregation inhibitors excluding heparin (115 subjects [20.1%]). A total of 552 subjects (96.3%) received at least one non-ocular concomitant medication, most commonly (>20.0% subjects) other viral vaccines (328 subjects [57.2%]), other diagnostic agents (252 subjects [44.0%]), HMG CoA reductase inhibitors (203 subjects [35.4%]), proton pump inhibitors (136 subjects [23.7%]), platelet aggregation inhibitors excluding heparin (132 subjects [23.0%]), selective beta blocking agents (128 subjects [22.3%]), and dihydropyridine derivatives (126 subjects [22.0%]).

Evidence for comparator:

Eylea (comparator)

Actual start date of recruitment	13 August 2020
Long term follow-up planned	Yes
Long term follow-up rationale	Safety, Efficacy
Long term follow-up duration	1 Months
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 87
Country: Number of subjects enrolled	Slovakia: 29
Country: Number of subjects enrolled	Spain: 44
Country: Number of subjects enrolled	Bulgaria: 4
Country: Number of subjects enrolled	Czechia: 6
Country: Number of subjects enrolled	Hungary: 39
Country: Number of subjects enrolled	Latvia: 23
Country: Number of subjects enrolled	Australia: 13
Country: Number of subjects enrolled	India: 9
Country: Number of subjects enrolled	Israel: 84
Country: Number of subjects enrolled	Japan: 60
Country: Number of subjects enrolled	Korea, Republic of: 118
Country: Number of subjects enrolled	Russian Federation: 22
Country: Number of subjects enrolled	United States: 35
Worldwide total number of subjects	573
EEA total number of subjects	232

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	73
From 65 to 84 years	250
85 years and over	250

Subject disposition

Recruitment

Recruitment details:

A total of 576 subjects were randomly assigned to receive either SCD411 (288 subjects) or Eylea (288 subjects) treatment. Two subjects (Subject 1215002 and Subject 1717008) met the exclusion criteria but were randomized in error. Subject 5003008 also did not receive any study drug injection. These 3 subjects were excluded from all analyses sets.

Pre-assignment

Screening details:

A total of 914 subjects were assessed for eligibility across 132 sites in 14 countries. Upon entry into the study, subjects were assigned a screening number. Subjects who met all inclusion and none of the exclusion criteria were to return to the clinic on Day 1 for further evaluation.

Period 1

Period 1 title	Treatment period (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Investigator, Monitor, Data analyst, Assessor, Subject

Blinding implementation details:

This was a double-masked study. To prevent bias in treatment assignment, eligible subjects were randomly assigned using the IRT. Subjects and study site staff involved in subject management and study assessments were masked to study treatment assignment.

Arms

Are arms mutually exclusive?	Yes
Arm title	SCD411 group

Arm description:

SCD411 was a proposed biosimilar of Eylea having aflibercept as the active substance. SCD411 was administered as IVT injection of 2 mg (0.05 mL) every 4 weeks (approximately every 28 days, monthly) for 3 consecutive doses, followed by a 2 mg (0.05 mL) injection once every 8 weeks (2 months).

Arm type	Experimental
Investigational medicinal product name	Aflibercept biosimilar
Investigational medicinal product code	
Other name	SCD411
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

SCD411 was administered as IVT injection of 2 mg (0.05 mL) every 4 weeks (approximately every 28 days, monthly) for 3 consecutive doses, followed by a 2 mg (0.05 mL) injection once every 8 weeks (2 months).

Arm title	Eylea group
------------------	-------------

Arm description:

Eylea was administered as IVT injection of 2 mg (0.05 ml) every 4 weeks (approximately every 28 days, monthly) for the first 3 months, followed by 2 mg (0.05 ml) injection once every 8 weeks (2 months).

Arm type	Active comparator
Investigational medicinal product name	Aflibercept
Investigational medicinal product code	
Other name	Eylea
Pharmaceutical forms	Injection
Routes of administration	Intravitreal use

Dosage and administration details:

Eylea has been approved for the treatment of wet AMD when administered as IVT injection of 2 mg (0.05 mL) every 4 weeks (approximately every 28 days, monthly) for 3 consecutive doses, followed by a 2 mg (0.05 mL) injection once every 8 weeks (2 months).

Number of subjects in period 1	SCD411 group	Eylea group
Started	287	286
Completed	260	259
Not completed	27	27
Consent withdrawn by subject	8	6

Primary: Change from Baseline in BCVA Score for Study Eye in FAS at Week 8

End point title	Change from Baseline in BCVA Score for Study Eye in FAS at Week 8
-----------------	---

End point description:

The primary endpoint was the change from baseline in BCVA as measured by ETDRS letters score or 2702 charts at Week 8. The BCVA score was comparable at Baseline among the treatment groups in the FAS. At Week 8, both treatment groups showed similar improvement from Baseline in the BCVA scores: a mean of 5.5 and 5.8 letters and an LS mean of 5.5 and 5.9 letters in the SCD411 and Eylea groups, respectively.

End point type	Primary
----------------	---------

End point timeframe:

From baseline through 8 weeks

End point values	SCD411 group	Eylea group

Unadjusted Week 8	64.2 (± 13.32)	65.7 (± 13.08)		

Statistical analyses

Statistical analysis title	Statistical analysis - FAS
----------------------------	----------------------------

Statistical analysis description:

The change from baseline in BCVA score for study eye at Week 8 for the primary estimand was summarized and analyzed using MMRM analysis (Mixed-effects model for repeated measures).

Comparison groups	SCD411 group v Eylea group
Number of subjects included in analysis	573
Analysis specification	Pre-specified
Analysis type	equivalence ^[1]
Parameter estimate	Mean difference (final values)
Point estimate	-0.4
Confidence interval	
level	95 %
sides	2-sided
lower limit	-1.8
upper limit	1.1
Variability estimate	Standard error of the mean
Dispersion value	0.74

Notes:

[1] - LS mean difference (SCD411 – Eylea), MMRM. The MMRM analysis included the change from baseline as dependent variable; visit, treatment group, and visit × treatment group as fixed effects, and baseline BCVA score as a covariate. An unstructured covariance matrix was used. Degrees of freedom were approximated using Kenward-Roger approach.

Primary: Change from Baseline in BCVA Score for Study Eye in PPS at Week 8

End point title	Change from Baseline in BCVA Score for Study Eye in PPS at Week 8
-----------------	---

End point description:

The primary endpoint was the change from baseline in BCVA as measured by ETDRS letters score or 2702 charts at Week 8. The BCVA score was comparable at Baseline among the treatment groups in the PPS. At Week 8, the analysis based on the PPS yielded results similar to those of the FAS.

End point type	Primary

Adverse events

Adverse events information

Timeframe for reporting adverse events:

Adverse events were assessed beginning at enrollment (date of signed informed consent) and up to 28 days after the last dose of the study drug.

Adverse event reporting additional description:

Overall, SCD411 was well-tolerated with a favorable safety profile that was comparable with Eylea in the total population. The incidence of ocular and non-ocular TEAEs was similar among the 2 treatment groups. No TEAEs leading to death were reported in the study.

Assessment type	Systematic
