

## Clinical trial results:

### A Phase 1b/2 Study to Evaluate the Safety, Pharmacokinetics, and Preliminary Efficacy of Isatuximab (SAR650984) in Patients Awaiting Kidney Transplantation

#### Summary

EudraCT number	2019-004154-28
Trial protocol	ES
Global end of trial date	02 May 2022

#### Results information

Result version number	v2 (current)
This version publication date	16 July 2023
First version publication date	17 May 2023
Version creation reason	• Correction of full data set correction to timeframes and subject number of PK endpoint.

#### Trial information

##### Trial identification

Sponsor protocol code	TED16414
-----------------------	----------

##### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04294459
WHO universal trial number (UTN)	U1111-1238-9716
Other trial identifiers	IND: 143523

Notes:

##### Sponsors

Sponsor organisation name	Sanofi-Aventis Recherche & Développement
Sponsor organisation address	1 Avenue Pierre Brossolette, Chilly-Mazarin, France, 91380
Public contact	Trial Transparency Team, Sanofi Aventis Recherche & Développement, Contact-US@sanofi.com
Scientific contact	Trial Transparency Team, Sanofi Aventis Recherche & Développement, Contact-US@sanofi.com

Notes:

##### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	28 November 2022
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	02 May 2022
Was the trial ended prematurely?	Yes

Notes:

## General information about the trial

Main objective of the trial:

- Phase 1: To characterise the safety and tolerability of isatuximab in kidney transplant candidates.
- Phase 2: To evaluate the efficacy of isatuximab in desensitisation of subjects awaiting kidney transplantation.

Protection of trial subjects:

Subjects were fully informed of all pertinent aspects of the clinical trial as well as the possibility to discontinue at any time in language and terms appropriate for the subject and considering the local culture. During the course of the trial, subjects were provided with individual subject cards indicating the nature of the trial the subject is participating, contact details and any information needed in the event of a medical emergency. Collected personal data and human biological samples were processed in compliance with the Sanofi-Aventis Group Personal Data Protection Charter ensuring that the Group abides by the laws governing personal data protection in force in all countries in which it operates.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	18 June 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Spain: 11
Country: Number of subjects enrolled	United States: 12
Worldwide total number of subjects	23
EEA total number of subjects	11

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0

Adults (18-64 years)	21
From 65 to 84 years	2
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Study was conducted at 6 active sites in 2 countries. A total of 23 subjects were enrolled between 18 Jun 2020 and 02 Nov 2021 and received isatuximab monotherapy. Study was planned to be conducted in 2 parts: Phase 1 (safety run-in) & Phase 2 (efficacy).

### Pre-assignment

Screening details:

Sponsor decided to terminate study for non-safety reasons on 02 May 2022 after interim analysis. It was determined that enrolment of remaining subjects was unlikely to have any significant impact on study results & hence trial was stopped. Subject disposition, baseline, endpoints & safety data were presented for combined Phase 1 and 2 population.

### Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Cohort A: Subjects With cPRA $\geq$ 99.90%

Arm description:

Subjects with calculated panel reactive antibodies (cPRA) greater than or equal to ( $\geq$ ) 99.90 percent (%) (indicating active candidates on kidney transplant waitlist) received isatuximab 10 milligrams per kilogram (mg/kg), intravenous (IV) infusion, once weekly (QW) for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then every 2 weeks (Q2W) for subsequent treatment cycles (each cycle of 28 days) until unacceptable adverse events (AEs) or subject's decision to stop the treatment (maximum treatment duration:13 weeks).

Arm type	Experimental
Investigational medicinal product name	Isatuximab
Investigational medicinal product code	SAR650984
Other name	Sarclisa
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Isatuximab 10 mg/kg, IV infusion, QW for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then Q2W for subsequent treatment cycles (each cycle of 28 days).

<b>Arm title</b>	Cohort B: Subjects With cPRA 80.00% to 99.89%
------------------	---

Arm description:

Subjects with cPRA between 80.00% to 99.89% (indicating active candidates on kidney transplant waitlist with no living donor cleared for donation) received isatuximab 10 mg/kg, IV infusion, QW for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then Q2W for subsequent treatment cycles (each cycle of 28 days) until unacceptable AEs or subject's decision to stop the treatment (maximum treatment duration: 13 weeks).

Arm type	Experimental
Investigational medicinal product name	Isatuximab
Investigational medicinal product code	SAR650984
Other name	Sarclisa
Pharmaceutical forms	Solution for infusion
Routes of administration	Intravenous use

Dosage and administration details:

Isatuximab 10 mg/kg, IV infusion, QW for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then Q2W for subsequent treatment cycles (each cycle of 28 days).

<b>Number of subjects in period 1</b>	Cohort A: Subjects With cPRA ≥99.90%	Cohort B: Subjects With cPRA 80.00% to 99.89%
Started	12	11
Completed	12	10
Not completed	0	1
Adverse event	-	1

## Baseline characteristics

### Reporting groups

Reporting group title	Cohort A: Subjects With cPRA $\geq$ 99.90%
Reporting group description:	
Subjects with calculated panel reactive antibodies (cPRA) greater than or equal to ( $\geq$ ) 99.90 percent (%) (indicating active candidates on kidney transplant waitlist) received isatuximab 10 milligrams per kilogram (mg/kg), intravenous (IV) infusion, once weekly (QW) for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then every 2 weeks (Q2W) for subsequent treatment cycles (each cycle of 28 days) until unacceptable adverse events (AEs) or subject's decision to stop the treatment (maximum treatment duration:13 weeks).	
Reporting group title	Cohort B: Subjects With cPRA 80.00% to 99.89%
Reporting group description:	
Subjects with cPRA between 80.00% to 99.89% (indicating active candidates on kidney transplant waitlist with no living donor cleared for donation) received isatuximab 10 mg/kg, IV infusion, QW for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then Q2W for subsequent treatment cycles (each cycle of 28 days) until unacceptable AEs or subject's decision to stop the treatment (maximum treatment duration: 13 weeks).	

Reporting group values	Cohort A: Subjects With cPRA $\geq$ 99.90%	Cohort B: Subjects With cPRA 80.00% to 99.89%	Total

## End points

### End points reporting groups

Reporting group title	Cohort A: Subjects With cPRA $\geq$ 99.90%
Reporting group description: Subjects with calculated panel reactive antibodies (cPRA) greater than or equal to ( $\geq$ ) 99.90 percent (%) (indicating active candidates on kidney transplant waitlist) received isatuximab 10 milligrams per kilogram (mg/kg), intravenous (IV) infusion, once weekly (QW) for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then every 2 weeks (Q2W) for subsequent treatment cycles (each cycle of 28 days) until unacceptable adverse events (AEs) or subject's decision to stop the treatment (maximum treatment duration:13 weeks).	
Reporting group title	Cohort B: Subjects With cPRA 80.00% to 99.89%
Reporting group description: Subjects with cPRA between 80.00% to 99.89% (indicating active candidates on kidney transplant waitlist with no living donor cleared for donation) received isatuximab 10 mg/kg, IV infusion, QW for 4 weeks (i.e., on Day 1, Day 8, Day 15 and Day 22 of Cycle 1) and then Q2W for subsequent treatment cycles (each cycle of 28 days) until unacceptable AEs or subject's decision to stop the treatment (maximum treatment duration: 13 weeks).	

### Primary: Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs)

End point title	Number of Subjects With Treatment-Emergent Adverse Events (TEAEs) and Treatment-Emergent Serious Adverse Events (TESAEs) <sup>[1]</sup>
-----------------	---

#### End point description:

An AE was defined as any untoward medical occurrence in a subject who received study drug and did not necessarily had to have a causal relationship with the treatment. Serious adverse events (SAEs) were any untoward medical occurrence that at any dose: resulted in death, was life-threatening, required inpatient hospitalisation or prolongation of existing hospitalisation, resulted in persistent or significant disability/incapacity, was a congenital anomaly/birth defect, was a medically important event. TEAEs were defined as AEs that developed, worsened or became serious during the TEAE period (defined as the time from the first dose of study drug until study cut-off date). Analysis was performed on all treated population which included all subjects who received at least one dose of isatuximab. Data was planned to be collected and analysed for the combined Phase 1 and 2 population.

End point type	Primary
----------------	---------

#### End point timeframe:

From first dose of study drug until study cut-off date (maximum duration: up to 97.7 weeks)

#### Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

End point values	Cohort A: Subjects With cPRA $\geq$ 99.90%	Cohort B: Subjects With cPRA 80.00% to 99.89%		
Subject group type	Reporting group	Reporting group

### Primary: Number of Subjects With Hematological Abnormalities

End point title	Number of Subjects With Hematological Abnormalities <sup>[2]</sup>
-----------------	--

End point description:

Abnormal hematological parameters assessed were anemia, platelet count decreased, neutrophil count decreased, lymphocyte count decreased and monocytes. The hematological abnormality grades were based on National Cancer Institute Common Terminology Criteria for Adverse Events (NCI-CTCAE) Version 5.0, where Grade 1 = Mild; Grade 2 = Moderate; Grade 3 = Severe; Grade 4 = Potentially Life Threatening. Grade refers to the severity of the AEs. Monocytes were assessed as per potentially clinically significant abnormality (PCSA) criteria defined as: greater than (>)  $0.7 \times 10^9/\text{Litre}$ . Analysis was performed on all treated population. Here, "n" = subjects with available data for each specified category. Data was planned to be collected and analysed for the combined Phase 1 and 2 population.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug until study cut-off date (maximum duration: up to 97.7 weeks)

Notes:

[2] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

End point values	Cohort A: Subjects With cPRA ≥99.90%	Cohort B: Subjects With cPRA 80.00% to 99.89%		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	12	11		
Units: subjects				
Anemia: Grade 1 (n=12,11)	6	8		
Anemia: Grade 2 (n=12,11)	3	2

## Statistical analyses

No statistical analyses for this end point

## Primary: Number of Subjects With Renal Function Abnormalities

End point title	Number of Subjects With Renal Function Abnormalities <sup>[3]</sup>
-----------------	---

End point description:

Abnormal renal parameters assessed were creatinine increased and estimated Glomerular Filtration Rate (eGFR). The renal function abnormality grades were based on NCI-CTCAE, Version 5.0, where Grade 1 = Mild; Grade 2 = Moderate; Grade 3 = Severe; Grade 4 = Potentially Life Threatening. Grade refers to the severity of the AEs. eGFR was assessed as per PCSA criteria: 60 less than or equal to ( $\leq$ ) to less than ( $<$ ) 90 millilitres per minute per 1.73 square metre (mL/min/1.73m<sup>2</sup>) (Mild), 30  $\leq$  to  $<$  60 mL/min/1.73m<sup>2</sup> (Moderate), 15  $\leq$  to  $<$  30 mL/min/1.73m<sup>2</sup> (Severe),  $<$  15 mL/min/1.73m<sup>2</sup> (End Stage Renal Disease). Analysis was performed on all treated population. Data was planned to be collected and analysed for the combined Phase 1 and 2 population.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug until study cut-off date (maximum duration: up to 97.7 weeks)

Notes:

[3] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: As the endpoint was descriptive in nature, no statistical analysis was reported.

End point values	Cohort A: Subjects With cPRA $\geq 99.90\%$	Cohort B: Subjects With cPRA 80.00% to 99.89%		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	12	11

## Primary: Number of Subjects With Abnormal Electrolytes Parameters

End point title	Number of Subjects With Abnormal Electrolytes Parameters <sup>[4]</sup>
-----------------	---

End point description:

Abnormal electrolyte parameters assessed were hyponatremia, hypernatremia, hyperkalemia, hypokalemia, hypercalcemia, hypocalcemia, blood bicarbonate decreased, hypermagnesemia, hypomagnesemia, chloride. The abnormal grades were based on NCI-CTCAE, Version 5.0, where Grade 1 = Mild; Grade 2 = Moderate; Grade 3 = Severe; Grade 4 = Potentially Life Threatening. Grade refers to the severity of the AEs. Chloride was estimated as per PCSA criteria: < 80 millimoles/litre [mmol/L] and > 115 mmol/L. Analysis was performed on all treated population. Here, "n" = subjects with available data for each specified category and "99999" is used as a space filler which signifies that none of the subjects were available for assessment. Data was planned to be collected and analysed for the combined Phase 1 and 2 population.

### Primary: Percentage of Subjects With Response

End point title	Percentage of Subjects With Response <sup>[7]</sup>
-----------------	---

End point description:

Response was defined as the percentage of subjects meeting at least one of the predefined desensitisation efficacy criteria as measured by single antigen bead (SAB) assay as follows: reduction in cPRA resulting in at least 100% increase of likelihood of finding a compatible donor; reduction in antibody titer (greater than or equal to  $\geq 75\%$  reduction from Baseline) to achieve target cPRA; elimination of  $\geq 1$  human leukocyte antigen (HLA) antibody (i.e., mean fluorescence intensity (MFI) reduced to  $< 2000$ ) as measured by SAB assay, for antibodies with Baseline MFI  $\geq 3000$ . Analysis performed on efficacy evaluable population which included all subjects who received at least 1 dose of isatuximab, with an evaluable Baseline and at least 1 evaluable post-baseline efficacy assessment and received  $\geq 75\%$  of planned cumulative doses. Data was planned to be collected and analysed for the combined Phase 1 and 2 population.

End point type	Primary
----------------	---------

End point timeframe:

From first dose of study drug until end of follow-up period (maximum duration: up to 39.1 weeks)

Notes:

## More information

### Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
23 July 2020	Following changes were made: Provided option to adapt the premedication depending on individual situation; Clarified monitoring and risks related to viral reactivation; Added indirect Coombs tests after treatment period during Site Visit follow-up period (FUP) if Cycle (C)2Day (D)1 was positive; Ensured a post-treatment sample was collected in case C3D1 sample was not collected or if subject discontinued treatment prior to C3D1; Modified sample collection timepoint to reduce wait time/burden for study subjects; Provided flexibility and potentially reduced site visit for study subjects; Updated isatuximab approval status and number of treated subjects; Updated infusion rates based on fixed volume infusion method; Corrected typographical error; Added obinutuzumab to require 6 months washout period; Included flexibility and ease of continuation of study during regional or national emergency such as Covid-19; Updated management guideline on Grade 2 and 3 IR including permanent discontinuation of study treatment at third infusion reactions (IR); "AE or" was added to the sentence: "However, if either of the following conditions applies, then the event must be recorded and reported as an AE or SAE (instead of a disease related event [DRE]):"; Pregnancy test frequency was corrected to be consistent with Schedule of Activities; Minor editorial and format changes.
01 February 2022	Following changes were made: Criteria for cPRA reduction was corrected from "at least 50% increase of likelihood" to "at least 100% increase of likelihood"; Editorial changes were made to clarify that history of active or latent tuberculosis was relevant if within 24 weeks prior to IMP initiation, and "(peritoneal, etc.)" were specific to the "deep tissue/space infection"; Clarified on need for individual serology and viral load tests; minor editorial and format changes were done.

Notes:

### Interruptions (globally)

Were there any global interruptions to the trial? No

### Limitations and caveats

Limitations of the trial such as small numbers of subjects analysed or technical problems leading to unreliable data.

Study was terminated for non-safety reasons on 02 May 2022. It was determined that enrolment of remaining subjects was unlikely to have any significant impact on results. All 23 subjects enrolled were followed-up per protocol until termination date.

Notes:
