

Clinical trial results:

A Phase 2, multicenter, open-label, multi-cohort study to assess safety and efficacy of CC-90011

in combination with nivolumabin subjects with advanced cancers

Summary

EudraCT number	2019-004194-95
Trial protocol	FR GB ES PL IT
Global end of trial date	19 December 2023

Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	31 January 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	19 December 2023
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to assess the safety and efficacy of CC-90011 in combination with nivolumab in subjects with small cell lung cancer or squamous non-small cell lung cancer who have progressed after 1 or 2 lines of therapy.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Conference on Harmonization Good Clinical Practice Guidelines. All the local regulatory requirements pertinent to safety of trial participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	12 July 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United Kingdom: 6
Country: Number of subjects enrolled	United States: 10
Country: Number of subjects enrolled	France: 14
Country: Number of subjects enrolled	Italy: 14
Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	Spain: 46
Worldwide total number of subjects	92
EEA total number of subjects	76

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0

Adolescents (12-17 years)	0
Adults (18-64 years)	51
From 65 to 84 years	40
85 years and over	1

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants were enrolled in 6 countries.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
Arm title	Cohort A 40 mg

Arm description:

Participants with small cell lung cancer (SCLC) and immune checkpoint inhibitor (ICI) naive received capsule of 40 milligram (mg) of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Arm type	Experimental
Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60 minute infusion

Investigational medicinal product name	CC-90011
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

40 mg capsule administered orally

Arm title	Cohort A 60mg
------------------	---------------

Arm description:

Participants with SCLC and ICI naive received capsule of 60 mg of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Arm type	Experimental
Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60 minute infusion

Investigational medicinal product name	CC-90011
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use
Dosage and administration details: 40 mg capsule administered orally	
Arm title	Cohort B 40 mg

Arm description:

Participants with SCLC and ICI progressor received capsule of 40 mg of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Arm type	Experimental
Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60 minute infusion

Investigational medicinal product name	CC-90011
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

40 mg capsule administered orally

Arm title	Cohort C
------------------	----------

Arm description:

Participants with squamous non-small cell lung cancer (sqNSCLC) and ICI progressor received capsule of 40 mg of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Arm type	Experimental
Investigational medicinal product name	Nivolumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

Nivolumab was administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60 minute infusion

Investigational medicinal product name	CC-90011
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Capsule
Routes of administration	Oral use

Dosage and administration details:

40 mg capsule administered orally

Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.	

Primary: Overall Response Rate

End point title	Overall Response Rate ^[1]
End point description: Overall response rate was defined as the percentage of participants in the treated population who had confirmed complete response (CR) or confirmed partial response (PR) as assessed by Investigator review per RECIST v1.1. CR was defined as disappearance of all target lesions and any pathological lymph nodes (whether target or non-target) must have reduction in short axis to < 10 millimeter (mm). PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. Treated population consist of all participants who enrolled and took at least one dose of either CC-90011 or nivolumab.	
End point type	Primary
End point timeframe: Every 6 weeks post Cycle 1 (each cycle is of 28 days) Day 1 for the first 24 weeks and then every 8 weeks until disease progression, new anticancer therapy, death or withdrawal by participants (up to approximately 33 months)	
Notes: [1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point. Justification: Not planned as per study design

Secondary: Duration of response

End point title	Duration of response
-----------------	----------------------

End point description:

Duration of Response was defined as the time from the first occurrence of a confirmed documented response to the time of the first documented tumor progression, as determined by Investigator review per RECIST v1.1, or death from any cause, whichever comes first. CR was defined as disappearance of all target lesions and any pathological lymph nodes (whether target or non-target) must have reduction in short axis to < 10 millimeter (mm). PR was defined as at least a 30% decrease in the sum of diameters of target lesions, taking as reference the baseline sum diameters. Treated population consist of all participants who enrolled and took at least one dose of either CC-90011 or nivolumab. Treated Population with confirmed Best Response of CR or PR were included in analysis.

End point type	Secondary
----------------	-----------

End point timeframe:

Every 6 weeks post cycle 1 day 1 (each cycle is of 28 days) for the first 24 weeks and then every 8 weeks until disease progression, new anticancer therapy, death or withdrawal by participant (up to approximately 33 months))

Secondary: Progression-Free Survival

End point title	Progression-Free Survival
-----------------	---------------------------

End point description:

Progression-Free Survival is the time from first dose of study treatment to the date of the first objectively documented tumor progression as assessed by Investigator review per RECIST v1.1 or death from any cause, whichever occurs first. Disease progression (PD) is defined as an additional 10% increase in tumor burden with a minimum 5 mm absolute increase from time of initial PD. This includes an increase in the sum of diameters of all target lesions and/or the diameters of new measurable lesions compared to the time of the initial PD. Treated population consist of all participants who enrolled and took at least one dose of either CC-90011 or nivolumab.

Adverse events

Adverse events information

Timeframe for reporting adverse events:

All cause mortality was collected from randomization till death due to any cause (Up to approximately 33 months). Serious and Non-Serious Adverse Events were collected from first dose till 100 days after the last dose (up to approximately 849 days).

Adverse event reporting additional description:

All cause mortality was collected for all the enrolled participants. Serious and Non-Serious Adverse Events were collected for all the treated participants.

Reporting groups

Reporting group title	Cohort A 40mg
-----------------------	---------------

Reporting group description:

Participants with small cell lung cancer (SCLC) and immune checkpoint inhibitor (ICI) naive received capsule of 40 milligram (mg) of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Reporting group title	Cohort B 40 mg
-----------------------	----------------

Reporting group description:

Participants with SCLC and ICI progressor received capsule of 40 mg of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Reporting group title	Cohort C
-----------------------	----------

Reporting group description:

Participants with squamous non-small cell lung cancer (sqNSCLC) and ICI progressor received capsule of 40 mg of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

Reporting group title	Cohort A 60mg
-----------------------	---------------

Reporting group description:

Participants with SCLC and ICI naive received capsule of 60 mg of CC-90011 orally once in a week in a continuous 28-day cycle. Nivolumab were administered intravenously at a dose of 480 mg every 4 weeks as a 30 minute or a 60-minute intravenous infusion.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
21 September 2020	The primary purpose of this protocol amendment is to address the 2 serious adverse events (SAEs) reported in the first two subjects treated in Study CC-90011-ST-002, and the resulting implementation to reduce the starting dose of CC-90011 to 40 mg. Implementation of this dose reduction was communicated to all participating sites through an administrative letter on 18 Aug 2020. This dose reduction is consistent with Protocol CC-90011-ST-002 language in Section 7.3.2 and the 2 SAEs of Grade 4 thrombocytopenia are consistent with the known safety profile of CC-90011.
02 March 2021	The primary purpose of this protocol amendment is to include a risk benefit assessment and additional language for severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2)/coronavirus-19 (COVID-19), as well as to update nivolumab guidance for male contraception and update adverse event management algorithms based on the nivolumab Investigator's Brochure (IB) version 19 addendum 01 and to extend pharmacokinetics and immunogenicity collection to all cohorts.
30 April 2022	This Protocol Amendment is to reduce the duration of survival follow-up period. As of this amendment, 92 patients have been enrolled across the 3 cohorts, with 41 patients in Cohort A (4 confirmed responses), 15 patients in Cohort B (0 confirmed responses), and 36 patients in Cohort C (2 confirmed responses). With the limited number of enrolled patients, overall survival (OS) may not provide meaningful interpretative data. As a result, OS is being moved to an exploratory objective and endpoint. The survival follow-up period is being modified by removing the up to 2-year duration and adding in that survival follow-up will stop after the 100-day safety follow-up visit of the last subject on study treatment.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
