

## Clinical trial results:

**A 28-week, randomized, double-blind, active-controlled, multicenter study to evaluate the efficacy of subcutaneously administered secukinumab compared to ustekinumab in adult patients with psoriatic arthritis and failure of TNF-inhibitor treatment (AgAIN)**

### Summary

EudraCT number	2019-004246-15
Trial protocol	DE
Global end of trial date	22 October 2024

### Results information

Result version number	v1 (current)
This version publication date	23 October 2025
First version publication date	23 October 2025

### Trial information

#### Trial identification

Sponsor protocol code	CAIN457FDE04
-----------------------	--------------

#### Additional study identifiers

ISRCTN number	-
ClinicalTrials.gov id (NCT number)	NCT04632927
WHO universal trial number (UTN)	-

### Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

## Results analysis stage

Analysis stage	Final
Date of interim/final analysis	22 October 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	22 October 2024
Was the trial ended prematurely?	No

Notes:

## General information about the trial

Main objective of the trial:

The primary objective was to demonstrate that secukinumab 300 mg subcutaneously (s.c.) is superior to ustekinumab 45/90 mg s.c. at Week 28 with regard to the proportion of patients achieving an improvement in score of  $\geq 0.35$  score points vs. Baseline (referred to as HAQ-DI response).

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and the International Conference on Harmonization (ICH) Good Clinical Practice (GCP) guidelines. All the local regulatory requirements pertinent to safety of trial subjects were also followed during the conduct of the trial.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	21 December 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

## Population of trial subjects

### Subjects enrolled per country

Country: Number of subjects enrolled	Germany: 119
Worldwide total number of subjects	119
EEA total number of subjects	119

Notes:

### Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	101
From 65 to 84 years	18
85 years and over	0

## Subject disposition

### Recruitment

Recruitment details:

Patients were randomized in 28 study sites across Germany

### Pre-assignment

Screening details:

A total of 144 patients overall were screened and 25 patients failed screening, while 119 patients completed the screening period successfully and underwent randomization

### Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Monitor, Carer, Data analyst, Assessor

### Arms

Are arms mutually exclusive?	Yes
<b>Arm title</b>	Secukinumab

Arm description:

Participants received 300 mg of secukinumab, administered as two 150 mg subcutaneous (s.c.) injections. Treatment was administered in a double-blind manner at Baseline and at Weeks 1, 2, 3, 4, 8, 12, 16, 20, and 24.

Arm type	Experimental
Investigational medicinal product name	Secukinumab
Investigational medicinal product code	AIN457
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Secukinumab for subcutaneous injection was provided in a pre-filled syringe (PFS) containing 150 mg. Each 300 mg dose was administered as two separate subcutaneous injections of 150 mg each

<b>Arm title</b>	Ustekinumab
------------------	-------------

Arm description:

Participants received ustekinumab via s.c. injection containing 45 mg (for participants weighing  $\leq 100$  kg) or 90 mg (for participants  $> 100$  kg). One active injection was administered at Baseline, Week 4, and 16. To maintain the blind, secukinumab-matching placebo injections were administered at all treatment time points (Baseline and at Weeks 1, 2, 3, 4, 8, 12, 16, 20, and 24). Depending on whether an ustekinumab injection was scheduled, participants received either one or two placebo injections per time point.

Arm type	Active comparator
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe
Routes of administration	Subcutaneous use

Dosage and administration details:

Placebo was provided in a matching PFS.

Investigational medicinal product name	Ustekinumab
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Solution for injection in pre-filled syringe

Routes of administration	Subcutaneous use
--------------------------	------------------

Dosage and administration details:

Ustekinumab was provided in a PFS containing either 45 mg or 90 mg for subcutaneous injection. According to the label, patients weighing  $\leq 100$  kg at baseline received a 45 mg dose, while those weighing  $> 100$  kg received 90 mg.

<b>Number of subjects in period 1</b>	Secukinumab	Ustekinumab
Started	56	63
Completed	56	53
Not completed	0	10
Consent withdrawn by subject	-	1
Physician decision	-	1
Adverse event, non-fatal	-	1
Subject decision	-	1
Loss of efficacy	-	1
Non-compliance with study drug	-	1
Lack of efficacy	-	4

## Baseline characteristics

### Reporting groups

Reporting group title	Secukinumab

## End points

### End points reporting groups

Reporting group title	Secukinumab
Reporting group description: Participants received 300 mg of secukinumab, administered as two 150 mg subcutaneous (s.c.) injections. Treatment was administered in a double-blind manner at Baseline and at Weeks 1, 2, 3, 4, 8, 12, 16, 20, and 24.	
Reporting group title	Ustekinumab
Reporting group description: Participants received ustekinumab via s.c. injection containing 45 mg (for participants weighing ≤100 kg) or 90 mg (for participants >100 kg). One active injection was administered at Baseline, Week 4, and 16. To maintain the blind, secukinumab-matching placebo injections were administered at all treatment time points (Baseline and at Weeks 1, 2, 3, 4, 8, 12, 16, 20, and 24). Depending on whether an ustekinumab injection was scheduled, participants received either one or two placebo injections per time point.	

### Primary: Proportion of patients with Health assessment questionnaire – disability index (HAQ-DI) response at Week 28

End point title	Proportion of patients with Health assessment questionnaire – disability index (HAQ-DI) response at Week 28
End point description: The disability assessment component of the HAQ evaluated a subject's level of functional ability through 20 questions grouped into 8 categories: dressing, rising, eating, walking, hygiene, reach, grip, and usual activities. Each item began with the prompt "Over the past week, are you able to..." and is scored on a 4-point scale: 0 (no difficulty), 1 (some difficulty), 2 (much difficulty), and 3 (unable to do). The overall score was calculated by averaging the scores across all answered domains, resulting in a total score ranging from 0 (no disability) to 3 (severe disability). A HAQ-DI response was defined as an improvement of ≥0.35 points from baseline at Week 28. Missing values were imputed as non-responders	
End point type	Primary
End point timeframe: Baseline, Week 28	

End point values	Secukinumab	Ustekinumab		
Subject group type	Reporting group	Reporting group		
Number of subjects analysed	56	63		
Units: Participants	32	17		

### Statistical analyses

Statistical analysis title	Secukinumab vs Ustekinumab
Comparison groups	Secukinumab v Ustekinumab

Number of subjects included in analysis	119
Analysis specification	Pre-specified
Analysis type	superiority
P-value	= 0.002
Method	Regression, Logistic
Parameter estimate	Odds ratio (OR)
Point estimate	3.647
Confidence interval	
level	95 %
sides	2-sided
lower limit	1.601
upper limit	8.311

### Secondary: Number of participants achieving Psoriasis area and severity index (PASI) 90 response at Week 28

End point title	Number of participants achieving Psoriasis area and severity index (PASI) 90 response at Week 28
End point description:	
<p>The Psoriasis Area and Severity Index (PASI) was a composite measure that evaluates the average severity of erythema, induration, and desquamation of psoriatic lesions—each graded on a scale from 0 (none) to 4 (severe)—across four body regions: head, upper limbs, trunk (including groin), and lower limbs (to the top of the buttocks). These scores were weighted by the area of skin involvement in each region to generate a total PASI score ranging from 0 to 72, with higher scores indicating more severe disease activity.</p> <p>The number of participants who achieved at least a 90% reduction in PASI score from baseline at Week 28 was assessed. Missing values were imputed as non-responders.</p>

### Secondary: Change from baseline in Swollen Joint Count (SJC) 66 at Week 28

End point title	Change from baseline in Swollen Joint Count (SJC) 66 at Week 28
-----------------	---

End point description:

Swollen Joint Count (SJC) 66 was a method of assessing joint inflammation. The number of swollen joints was determined by examining 66 joints and identifying those with visible or palpable swelling suggestive of synovitis. The 66 joints assessed for swelling included the 2 sternoclavicular, 2 acromioclavicular joints, 2 shoulders, 2 elbows, 2 wrists, 10 metacarpophalangeal, 10 proximal interphalangeal, 8 distal interphalangeal joints of the hands, 2 knees, 2 talotibial, 2 mid-tarsal, 10 metatarsophalangeal, and 10 proximal interphalangeal joints of the feet.

The change from baseline in SJC66 at Week 28 was assessed. A negative change from baseline indicated improvement.

No statistical analyses for this end point

### Secondary: Change from baseline in the Leeds Dactylitis Index (LDI)

End point title	Change from baseline in the Leeds Dactylitis Index (LDI)
-----------------	--

End point description:

The LDI was used to quantitatively assess dactylitis by measuring the circumference of affected digits and their corresponding control digits, along with the tenderness of each affected digit. Digits were classified as dactylitic if there was a  $\geq 10\%$  difference in circumference compared to the contralateral digit. When both digits were affected or a contralateral control was unavailable, a standardized reference range was applied.

For each dactylitic digit, the ratio of the affected to control circumference was multiplied by a binary tenderness score (1 = tender, 0 = non-tender). The resulting values were summed across all affected digits to calculate the total LDI score. A higher LDI score indicated more severe or widespread dactylitis.

The change in the LDI score from baseline to Week 28 was analyzed. A negative change from baseline indicated an improvement in dactylitis severity.

End point type	Secondary

**More information**

**Substantial protocol amendments (globally)**

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
10 September 2024	Changes due to early termination of recruitment: <ul style="list-style-type: none"><li>• Update/removal of some exploratory endpoints</li><li>• Specification that analyses will only be descriptive</li></ul> Changes to accommodate current requirements regarding patient safety: <ul style="list-style-type: none"><li>• Update of AE safety follow-up to align with SAE safety follow-up</li><li>• SAE reporting: Inclusion of Hy’s law language</li><li>• Update of reporting requirements for study treatment errors including misuse/abuse</li></ul>

Notes:

---

**Interruptions (globally)**

Were there any global interruptions to the trial? No

**Limitations and caveats**

None reported
