Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	13 February 2025
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	13 February 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

The main objective of the trial was to evaluate the safety and hemostatic effectiveness of EVARREST Fibrin Sealant Patch (EVARREST) in controlling mild or moderate soft tissue & parenchymal bleeding during open hepatic, abdominal, pelvic, retroperitoneal, and thoracic (non-cardiac) surgery in pediatric participants.

Protection of trial subjects:

The study was conducted in accordance with the Code of Federal Regulations, the UK statutory instruments, the International Council for Harmonization (ICH) Guideline for Good Clinical Practice (GCP), and the Declaration of Helsinki.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	19 March 2018
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	No

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	United States: 16
Country: Number of subjects enrolled	United Kingdom: 19
Worldwide total number of subjects	35
EEA total number of subjects	0

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	12
Children (2-11 years)	18
Adolescents (12-17 years)	5
Adults (18-64 years)	0
From 65 to 84 years	0

85 years and over	0
-------------------	---

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

A total of 35 participants were treated in the study. All participants completed the study. This was a single-arm study.

Period 1

Period 1 title	Overall study (overall period)
Is this the baseline period?	Yes
Allocation method	Not applicable
Blinding used	Not blinded

Arms

Arm title	EVARREST Fibrin Sealant Patch
-----------	-------------------------------

Arm description:

Participants with mild or moderate soft tissue or parenchymal bleeding during open hepatic, abdominal, pelvic, retroperitoneal, and thoracic (non-cardiac) surgery were treated with EVARREST Fibrin Sealant Patch (EVARREST). EVARREST Fibrin Sealant Patch is a sterile, bio-absorbable combination product consisting of two constituent parts- a flexible matrix and a coating of biological components (human plasma-derived fibrinogen and thrombin) embedded in a flexible composite patch component used as an adjunct to hemostasis during surgery.

Arm type	Experimental
Investigational medicinal product name	EVARREST Fibrin Sealant Patch
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Sealant
Routes of administration	Topical use

Dosage and administration details:

Participants with mild or moderate soft tissue or parenchymal bleeding were treated with EVARREST during surgical procedure.

Number of subjects in period 1	EVARREST Fibrin Sealant Patch
Started	35
Full analysis set	31 ^[1]
Completed	35

Notes:

[1] - The number of subjects at this milestone seems inconsistent with the number of subjects in the arm. It is expected that the number of subjects will be greater than, or equal to the number that completed, minus those who left.

Justification: Reported participants in the milestone are of full analysis set.

Baseline characteristics

Reporting groups

Reporting group title	EVARREST Fibrin Sealant Patch
-----------------------	-------------------------------

Reporting group description:

Participants with mild or moderate soft tissue or parenchymal bleeding during open hepatic, abdominal, pelvic, retroperitoneal, and thoracic (non-cardiac) surgery were treated with EVARREST Fibrin Sealant Patch (EVARREST). EVARREST Fibrin Sealant Patch is a sterile, bio-absorbable combination product consisting of two constituent parts- a flexible matrix and a coating of biological components (human plasma-derived fibrinogen and thrombin) embedded in a flexible composite patch component used as an adjunct to hemostasis during surgery.

Reporting group values	EVARREST Fibrin Sealant Patch	Total

End points

End points reporting groups

Reporting group title	EVARREST Fibrin Sealant Patch
-----------------------	-------------------------------

Reporting group description:

Participants with mild or moderate soft tissue or parenchymal bleeding during open hepatic, abdominal, pelvic, retroperitoneal, and thoracic (non-cardiac) surgery were treated with EVARREST Fibrin Sealant Patch (EVARREST). EVARREST Fibrin Sealant Patch is a sterile, bio-absorbable combination product consisting of two constituent parts- a flexible matrix and a coating of biological components (human plasma-derived fibrinogen and thrombin) embedded in a flexible composite patch component used as an adjunct to hemostasis during surgery.

Primary: Absolute Time to Hemostasis

End point title	Absolute Time to Hemostasis ^[1]
-----------------	--

End point description:

Hemostasis was defined as no detectable bleeding at the Target Bleeding Site (TBS). Absolute time to hemostasis was defined as the absolute time elapsed from TBS identification to the last moment in time at which detectable bleeding at the TBS was observed. TBS was defined as the first accessible mild or moderate bleeding site identified in the hepatic parenchyma or soft tissue, where conventional methods of controlling bleeding were ineffective or impractical and was amenable to manual compression.

End point type	Primary
----------------	---------

End point timeframe:

During surgical procedure on Day 0 (from TBS identification to the last moment in time at which detectable bleeding at TBS observed)

Notes:

[1] - No statistical analyses have been specified for this primary end point. It is expected there is at least one statistical analysis for each primary end point.

Justification: only descriptive data was planned to be reported for this endpoint.

End point values	EVARREST Fibrin Sealant Patch			
Subject group type	Reporting group			
Number of subjects analysed	31			
Units: Minutes				
median (confidence interval 95%)	4.00 (4.00 to 4.00)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants who Achieved Hemostatic Success at 4 Minutes

End point title	Percentage of Participants who Achieved Hemostatic Success at 4 Minutes
-----------------	---

End point description:

Percentage of participants who achieved hemostatic success at 4 minutes was reported. A participant was considered hemostatic success at 4 minutes if the TBS was hemostatic at 4 minutes, and there was no re-bleeding that required treatment (other than observation only) at the TBS from 4 minutes following the first TBS identification through final fascial closure. Hemostasis was assessed at 4 minutes

from TBS identification by carefully releasing manual compression and removing the surgical sponge (if used). TBS was defined as the first accessible mild or moderate bleeding site identified in the hepatic parenchyma or soft tissue, where conventional methods of controlling bleeding were ineffective or impractical and was amenable to manual compression.

End point type	Secondary
End point timeframe:	
4 minutes after TBS identification (during surgical procedure on Day 0)	

End point values	EVARREST Fibrin Sealant Patch			
Subject group type	Reporting group			
Number of subjects analysed	31			
Units: Percentage of participants				
number (confidence interval 95%)	77.4 (58.90 to 90.41)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants who Achieved Hemostatic Success at 10 Minutes

End point title	Percentage of Participants who Achieved Hemostatic Success at 10 Minutes
-----------------	--

End point description:

Percentage of participants who achieved hemostatic success at 10 minutes was reported. A participant was considered hemostatic success at 10 minutes if the TBS was hemostatic at 10 minutes, and there was no re-bleeding that required treatment (other than observation only) at the TBS from 10 minutes following the first TBS identification through final fascial closure. Hemostasis was assessed at 10 minutes from TBS identification and at initiation of final fascial closure. TBS was defined as the first accessible mild or moderate bleeding site identified in the hepatic parenchyma or soft tissue, where conventional methods of controlling bleeding were ineffective or impractical and was amenable to manual compression.

End point type	Secondary
End point timeframe:	
10 minutes after TBS identification (during surgical procedure on Day 0)	

End point values	EVARREST Fibrin Sealant Patch			
Subject group type	Reporting group			
Number of subjects analysed	31			
Units: Percentage of participants				
number (confidence interval 95%)	93.5 (78.58 to 99.21)			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with No Re-bleeding at the TBS

End point title	Percentage of Participants with No Re-bleeding at the TBS
-----------------	---

End point description:

Percentage of participants with no re-bleeding at the TBS was reported. TBS was defined as the first accessible mild or moderate bleeding site identified in the hepatic parenchyma or soft tissue, where conventional methods of controlling bleeding were ineffective or impractical and was amenable to manual compression.

End point type	Secondary
----------------	-----------

End point timeframe:

During surgical procedure on Day 0 (from TBS identification to final fascial closure)

End point values	EVARREST Fibrin Sealant Patch			
Subject group type	Reporting group			
Number of subjects analysed	31			
Units: Percentage of participants				
number (not applicable)	96.8			

Statistical analyses

No statistical analyses for this end point

Secondary: Percentage of Participants with Adverse Events That Were Potentially Related to Bleeding at the TBS

End point title	Percentage of Participants with Adverse Events That Were Potentially Related to Bleeding at the TBS
-----------------	---

End point description:

Percentage of participants with adverse events that were potentially related to bleeding at the TBS was reported. TBS was defined as the first accessible mild or moderate bleeding site identified in the hepatic parenchyma or soft tissue, where conventional methods of controlling bleeding were ineffective or impractical and was amenable to manual compression. An adverse event means any untoward medical occurrence associated with the use of a drug in humans, whether or not considered drug related. An AE can be any unfavorable and unintended sign, symptom, or disease temporally associated with the use of a drug, without judgment about causality.

End point type	Secondary

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
26 October 2017	The overall rationale for the amendment-1 was to remove post-surgery lab tests.
05 February 2018	The overall rationale for the amendment-2 was to update the re-instate post-surgery lab tests per food and drug administration (FDA) request.
12 December 2019	The overall rationale for the amendment-3 was to addition of OUS (United Kingdom sites) – Not implemented in UK.
12 May 2020	The overall rationale for the amendment-4 was to update that 30-day follow-up (FU) visit could be by telephone (need for physical exam removed). The per protocol (PP) set should only exclude intent-to-treat (ITT) participants with major protocol deviations affecting the primary effectiveness endpoint, instead of all participants with major protocol deviations.
23 July 2021	The overall rationale for the amendment-5 was to exclude participants who received a coronavirus disease (COVID) vaccine within 4 weeks of surgery, or scheduled to have in follow-up period.
02 November 2023	The overall rationale for the amendment-6 was to remove age stratification (to allow participants less than [$<$] 1 year to be included at any stage of enrolment, not just final 4 participants).

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
