Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Interim
Date of interim/final analysis	26 September 2024
Is this the analysis of the primary completion data?	Yes
Primary completion date	15 January 2024
Global end of trial reached?	Yes
Global end of trial date	25 March 2025
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

Cohort A:

To evaluate the safety and tolerability of margetuximab + retifanlimab in patients with untreated locally advanced or metastatic gastric cancer (GC) or gastroesophageal junction (GEJ) cancer that is human epidermal growth factor 2 (HER2) immunohistochemistry (IHC) 3+ and PD-L1+ by IHC staining.

To evaluate the ORR of margetuximab plus retifanlimab for non-MSI-H patients in the response evaluable population (REP) using Investigator-assessed radiology reviews.

Cohort B, Part 1:

To select the best margetuximab, chemotherapy and CPI-containing combination regimen for further evaluation in Part 2, based on evaluation of safety and ORR in the primary response evaluable population (PREP) of patients with GC or GEJ cancer, irrespective of PD-L1 status. Note: This objective was removed under Protocol Amendment 5.

Protection of trial subjects:

This study was conducted under United States Investigational New Drug application, in compliance with Good Clinical Practice, as well as all applicable local and national laws and regulations of countries in which the trial was performed. At each trial site, an institutional review board (IRB) or independent ethics committee (IEC) reviewed and approved the clinical trial protocol, the current and previous versions of the Investigator's Brochure, and informed consent form(s), as applicable. The IRB/IEC subsequently approved protocol amendments and revisions. Investigators were responsible for obtaining and documenting written informed consent from each participant or legal representative. Written informed consent was obtained for all participants before any protocol-specific procedures or interventions were performed.

Background therapy:

Part A contained no background therapy

Part B used a background chemotherapy combination of either modified fluorouracil, leucovorin, and oxaliplatin (mFOLFOX-6), or capecitabine and oxaliplatin (XELOX), commonly used regimens for first-line HER2 positive GC and GEJ cancer patients worldwide. The investigator selected the background therapy.

Evidence for comparator: -

Actual start date of recruitment	30 September 2019
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Poland: 2
Country: Number of subjects enrolled	United Kingdom: 1
Country: Number of subjects enrolled	Italy: 1
Country: Number of subjects enrolled	Korea, Republic of: 19

Country: Number of subjects enrolled	Singapore: 1
Country: Number of subjects enrolled	United States: 24
Country: Number of subjects enrolled	China: 29
Country: Number of subjects enrolled	Taiwan: 5
Worldwide total number of subjects	82
EEA total number of subjects	3

Notes:

Subjects enrolled per age group

In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	45
From 65 to 84 years	37
85 years and over	0

Subject disposition

Recruitment

Recruitment details: -

Pre-assignment

Screening details:

Participants with untreated locally advanced unresectable or metastatic HER2+ gastric or gastroesophageal adenocarcinoma.

Period 1

Period 1 title	Entire study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Not blinded

Arms

Are arms mutually exclusive?	Yes
------------------------------	-----

Arm title	Cohort B: Control Arm
------------------	-----------------------

Arm description: -

Arm type	Active comparator
Investigational medicinal product name	Trastuzumab
Investigational medicinal product code	
Other name	Herceptin
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

8 mg/kg loading dose, then 6 mg/kg, every 3 weeks

Investigational medicinal product name	Background chemotherapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

One of two background chemotherapy regimens could be selected by the investigator;

1) modified FOLFOX-6: fluorouracil IV bolus (400 mg/m²), fluorouracil IV infusion (2400 mg/m² over 48 hours), leucovorin IV (400 mg/m²) and oxaliplatin IV (85 mg/m²) (mFOLFOX-6), every 2 weeks

2) XELOX: capecitabine 1000 mg/m² orally twice daily for 14/21 days, and oxaliplatin IV (130 mg/m², every 3 weeks)

Arm title	Cohort B: Experimental Arm 1
------------------	------------------------------

Arm description: -

Arm type	Experimental
Investigational medicinal product name	Margetuximab
Investigational medicinal product code	
Other name	MGAH22
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

15 mg/kg IV, every 3 weeks

Investigational medicinal product name	Background chemotherapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion

Routes of administration	Intravenous use
Dosage and administration details:	
One of two background chemotherapy regimens could be selected by the investigator;	
1) modified FOLFOX-6: fluorouracil IV bolus (400 mg/m ²), fluorouracil IV infusion (2400 mg/m ² over 48 hours), leucovorin IV (400 mg/m ²) and oxaliplatin IV (85 mg/m ²) (mFOLFOX-6), every 2 weeks	
2) XELOX: capecitabine 1000 mg/m ² orally twice daily for 14/21 days, and oxaliplatin IV (130 mg/m ² , every 3 weeks)	
Investigational medicinal product name	Retifanlimab
Investigational medicinal product code	
Other name	INCMAG00012, MGA012
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
375 mg IV, every 3 weeks	
Arm title	Cohort B: Experimental Arm 2
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Margetuximab
Investigational medicinal product code	
Other name	MGAH22
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
15 mg/kg IV, every 3 weeks	
Investigational medicinal product name	Tebotelimab
Investigational medicinal product code	
Other name	MGD013
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
600 mg IV, every 3 weeks	
Investigational medicinal product name	Background chemotherapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
One of two background chemotherapy regimens could be selected by the investigator;	
1) modified FOLFOX-6: fluorouracil IV bolus (400 mg/m ²), fluorouracil IV infusion (2400 mg/m ² over 48 hours), leucovorin IV (400 mg/m ²) and oxaliplatin IV (85 mg/m ²) (mFOLFOX-6), every 2 weeks	
2) XELOX: capecitabine 1000 mg/m ² orally twice daily for 14/21 days, and oxaliplatin IV (130 mg/m ² , every 3 weeks)	
Arm title	Cohort B: Experimental Arm 3
Arm description: -	
Arm type	Experimental
Investigational medicinal product name	Margetuximab
Investigational medicinal product code	
Other name	MGAH22
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use
Dosage and administration details:	
15 mg/kg IV, every 3 weeks	

Investigational medicinal product name	Background chemotherapy
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Infusion
Routes of administration	Intravenous use

Dosage and administration details:

One of two background chemotherapy regimens could be selected by the investigator;

1) modified FOLFOX-6: fluorouracil IV bolus (400 mg/m²), fluorouracil IV infusion (2400 mg/m² over 48 hours), leucovorin IV (400 mg/m²) and oxaliplatin IV (85 mg/m²) (mFOLFOX-6), every 2 weeks

2) XELOX: capecitabine 1000 mg/m² orally twice daily for 14/21 days, and oxaliplatin IV (130 mg/m², every 3 weeks)

Arm title	Cohort A: Chemotherapy-free Arm
------------------	---------------------------------

Number of subjects analysed	48	48	33	
Units: percentage				
number (confidence interval 95%)	83.3 (69.8 to 92.5)	83.3 (69.8 to 92.5)	97.0 (84.2 to 99.9)	

Statistical analyses

No statistical analyses for this end point

Adverse events

Adverse events information

Timeframe for reporting adverse events:

AEs were collected from the time of the first dose through 30 days after the last dose, average 6 month. All-cause mortality was collected from the first dose throughout the follow up period.

Adverse event reporting additional description:

AEs are based on physical exam, participant reports, and significant abnormal laboratory values. AEs were not collected in survival follow up. Only SAEs were collected in survival follow- if related to study treatment.

Assessment type	Systematic

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
06 June 2019	The criterion for defining uncontrolled hypertension in exclusion criterion 10(d) was reduced.
09 August 2019	<p>The choice of backbone chemotherapy regimens was revised based on recommendation of the study steering committee</p> <p>Changes were made to the secondary objectives for Cohort B. The population of interest HER2+ /PD-1+ was more narrowly defined as also being non-MSI-high. Specific assays were specified for determining HER2 status</p> <p>Clarification to entry criterion 7: neoadjuvant and adjuvant immunotherapy is excluded.</p> <p>Cautionary statement related to the use of capecitabine or fluorouracil in combination with anticoagulants, phenytoin and CYP2C9 substrates was added.</p> <p>Cautionary statement related to the use of oxaliplatin and other potentially nephrotoxic compounds was added.</p> <p>Clarified that no pharmacokinetic or immunogenicity samples will be collect from participants in the control arm.</p> <p>Additional timepoints for collecting prothrombin time and international normalized ratio text were added.</p>
26 January 2021	<p>Cohort A was revised. MSI-high status is no longer required for study entry and the sample size was increased to 110.</p> <p>Fertility and contraception language was updated to be consistent with Clinical Trial Facilitation Group recommendations on contraception.</p> <p>Minor changes to the entry criteria were made for clarity.</p> <p>Stratification factors were revised from tumor location (stomach vs gastrointestinal junction) to HER2 testing (ICH2=/FISH+ vs ICH3+)</p> <p>The guidelines for premedication and prophylaxis was modified to allow substitution of equivalent medications based on local medical practice and availability.</p> <p>A typographical correction was made to correct 337 overall survival (OS) events in Cohort B to 377 OS events.</p> <p>Updated the number of sites and countries participating in the study.</p> <p>Updated clinical experience information for margetuximab + pembrolizumab, tebotelimab (MGD013), and shorter infusion durations for margetuximab.</p> <p>Clarified that the ORR in Cohort A will be based on independent radiology review.</p> <p>Added that interruption of all components of chemotherapy for toxicity is limited to 2 consecutive cycles (6 weeks).</p>

06 June 2022	<p>The study halted enrollment due to a business decision and not a safety concern. Many changes were made to the protocol study design and procedures to support a timely closeout of the study.</p> <p>The requirement for independent assessment of response to treatment in Cohort A was removed. Final analysis will be conducted on investigator-assessed response. No sensitivity analysis will be conducted.</p> <p>In Cohort A: Secondary objective related to efficacy and Fcy receptor was removed. Secondary objective related to PK and exposure-response analysis was removed.</p> <p>In Cohort B, Part 1: Primary objective removed because enrollment was closed at 33 patients. Selection of the best treatment arm will not be made. Secondary objectives related to efficacy were changed to ORR and DCR only for each treatment arm. Secondary objectives related efficacy in the double positive and MSI-high subgroups were removed. Secondary objective related to efficacy and Fcy receptor was removed. Secondary objective related to PK and exposure-response analysis was removed.</p> <p>Cohort B, Part 2: Primary and secondary objectives were removed because no patients were enrolled.</p> <p>General guidance for dose reductions for chemotherapy agents were added. A clarification was made to the language on when to restart chemotherapy-related toxicity.</p> <p>The definition of the end of the study was changed to after the last patient completes the safety follow-up period.</p> <p>Patients in survival follow-up will be discontinued from the study.</p> <p>Revised the analysis to descriptive PK summaries. PPK, exposure-response modeling, and influence of intrinsic and extrinsic covariates will not be performed. Language to indicate that collection of PK, PD and ADA samples is no longer required was added.</p> <p>Removed the analysis of patient reported outcomes, as no questionnaires were completed.</p>
--------------	---

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
