Notes:

Paediatric regulatory details

Is trial part of an agreed paediatric investigation plan (PIP)	No
Does article 45 of REGULATION (EC) No 1901/2006 apply to this trial?	No
Does article 46 of REGULATION (EC) No 1901/2006 apply to this trial?	No

Notes:

Results analysis stage

Analysis stage	Final
Date of interim/final analysis	10 May 2024
Is this the analysis of the primary completion data?	No
Global end of trial reached?	Yes
Global end of trial date	23 February 2024
Was the trial ended prematurely?	No

Notes:

General information about the trial

Main objective of the trial:

To evaluate the effect of a range of diacylglycerol acyltransferase 2 inhibitor (PF-06865571/DGAT2i) doses administered alone, and coadministration of DGAT2i + acetyl-CoA carboxylase inhibitor (PF-05221304/ACCi), compared to placebo, and the coadministration of DGAT2i + ACCi relative to DGAT2i alone, in participants with biopsy confirmed nonalcoholic steatohepatitis (NASH) and fibrosis, on resolution of NASH without worsening of fibrosis or improvement in fibrosis by greater than or equal to (\geq) 1 stage without worsening of NASH, or both.

Protection of trial subjects:

The study was in compliance with the ethical principles derived from the Declaration of Helsinki and in compliance with all International Council for Harmonisation (ICH) Good Clinical Practice (GCP) Guidelines. All the local regulatory requirements pertinent to safety of trials participants were followed.

Background therapy: -

Evidence for comparator: -

Actual start date of recruitment	15 June 2020
Long term follow-up planned	No
Independent data monitoring committee (IDMC) involvement?	Yes

Notes:

Population of trial subjects

Subjects enrolled per country

Country: Number of subjects enrolled	Bulgaria: 1
Country: Number of subjects enrolled	Canada: 10
Country: Number of subjects enrolled	China: 4
Country: Number of subjects enrolled	Hong Kong: 14
Country: Number of subjects enrolled	India: 1
Country: Number of subjects enrolled	Japan: 45
Country: Number of subjects enrolled	Korea, Republic of: 8
Country: Number of subjects enrolled	Poland: 3
Country: Number of subjects enrolled	Puerto Rico: 15
Country: Number of subjects enrolled	Slovakia: 4
Country: Number of subjects enrolled	Taiwan: 5
Country: Number of subjects enrolled	United States: 145
Worldwide total number of subjects	255
EEA total number of subjects	8

Notes:

Subjects enrolled per age group	
In utero	0
Preterm newborn - gestational age < 37 wk	0
Newborns (0-27 days)	0
Infants and toddlers (28 days-23 months)	0
Children (2-11 years)	0
Adolescents (12-17 years)	0
Adults (18-64 years)	188
From 65 to 84 years	67
85 years and over	0

Subject disposition

Recruitment

Recruitment details:

A total of 256 participants with biopsy confirmed Non-alcoholic Steatohepatitis (NASH) with fibrosis state (F2-F3) were randomized, of which 255 were treated.

Pre-assignment

Screening details:

F2: significant stage of fibrosis when scarring had occurred and extended outside liver area and F3: severe stage of fibrosis with spreading and forming bridges with other fibrotic liver areas.

Period 1

Period 1 title	Overall Study (overall period)
Is this the baseline period?	Yes
Allocation method	Randomised - controlled
Blinding used	Double blind
Roles blinded	Subject, Investigator, Carer, Assessor

Blinding implementation details:

Double blind, double dummy, placebo controlled.

Arms

Are arms mutually exclusive?	Yes
Arm title	Placebo

Arm description:

Participants were randomised to receive 2 tablets of DGAT2i matching placebo and 1 tablet of ACCi matching placebo twice a day (BID) for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Placebo
Investigational medicinal product name	Placebo
Investigational medicinal product code	
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 2 tablets of DGAT2i matching placebo and 1 tablet of ACCi matching placebo orally BID for 48 weeks.

Arm title	DGAT2i/PF-06865571 25 mg BID
------------------	------------------------------

Arm description:

Participants were randomised to receive 1 tablet of DGAT2i 25 milligrams (mg) along with 1 tablet of DGAT2i and ACCi matching placebo BID for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	DGAT2i
Investigational medicinal product code	PF-06865571
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 1 tablet of DGAT2i 25 mg along with 1 tablet of DGAT2i and ACCi matching placebos orally BID for 48 weeks.

Arm title	DGAT2i/PF-06865571 75 mg BID
------------------	------------------------------

Arm description:

Participants were randomised to receive 1 tablet of DGAT2i 25 mg, 1 tablet of DGAT2i 50 mg and 1

tablet of ACCi matching placebo BID for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	DGAT2i
Investigational medicinal product code	PF-06865571
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 1 tablet of DGAT2i 25 mg, 1 tablet of DGAT2i 50 mg and 1 tablet of ACCi matching placebo orally BID for 48 weeks.

Arm title	DGAT2i/PF-06865571 150 mg BID
------------------	-------------------------------

Arm description:

Participants were randomised to receive 1 tablet of DGAT2i matching placebo, 1 tablet of DGAT2i 150 mg and 1 tablet of ACCi matching placebo BID for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	DGAT2i
Investigational medicinal product code	PF-06865571
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 1 tablet of DGAT2i matching placebo, 1 tablet of DGAT2i 150 mg and 1 tablet of ACCi matching placebo orally BID for 48 weeks.

Arm title	DGAT2i/PF-06865571 150 mg BID + ACCi/PF-05221304 5 mg BID
------------------	---

Arm description:

Participants were randomised to receive 1 tablet of DGAT2i matching placebo, 1 tablet of DGAT2i 150 mg and 1 tablet of ACCi 5 mg BID for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	DGAT2i + ACCi
Investigational medicinal product code	PF-06865571 + PF-05221304
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 1 tablet of DGAT2i matching placebo, 1 tablet of DGAT2i 150 mg and 1 tablet of ACCi 5 mg orally BID for 48 weeks.

Arm title	DGAT2i/PF-06865571 300 mg BID
------------------	-------------------------------

Arm description:

Participants were randomised to receive 2 tablets of DGAT2i 150 mg and 1 tablet of ACCi matching placebo BID for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	DGAT2i
Investigational medicinal product code	PF-06865571
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 2 tablets of DGAT2i 150 mg and 1 tablet of ACCi matching placebo orally BID for 48 weeks.

Arm title	DGAT2i/PF-06865571 300 mg BID + ACCi/PF-05221304 10 mg BID
------------------	--

Arm description:

Participants were randomised to receive 2 tablets of DGAT2i 150 mg and 1 tablet of ACCi 10 mg BID for 48 weeks by oral administration. Participants were followed up to 52 weeks.

Arm type	Experimental
Investigational medicinal product name	DGAT2i + ACCi
Investigational medicinal product code	PF-06865571 + PF-05221304
Other name	
Pharmaceutical forms	Tablet
Routes of administration	Oral use

Dosage and administration details:

Participants received 2 tablets of DGAT2i 150 mg and 1 tablet of ACCi 10 mg orally BID for 48 weeks.

Primary: Mean Proportion of Participants Achieving Resolution of NASH Without Worsening or Improvement of Fibrosis by ≥ 1 Stage Without Worsening of NASH or Both Based on Assessment by Sponsor-Identified Central Pathologist at Week 48: Bayesian Dose Response Model

End point title	Mean Proportion of Participants Achieving Resolution of NASH Without Worsening or Improvement of Fibrosis by ≥ 1 Stage Without Worsening of NASH or Both Based on Assessment by Sponsor-Identified Central Pathologist at Week 48: Bayesian Dose Response Model ^[1]
-----------------	---

End point description:

NASH resolution: disappearance of ballooning (NAS ballooning score=0; 0=no ballooning, 1= few balloon cells, 2= many cells, prominent ballooning; HS= more DA), residual/no LI (NAS LI score 0/1, 0= no foci, 1= <2 foci, 2= 2-4 foci, 3= >4 foci; HS = more DA), NAS steatosis score 0, 1, 2 or 3, 0= <5% hepatocytes involved (HI), 1= 5-33% HI, 2= 34-66% HI, 3= >66% HI; HS= more DA. No worsening of fibrosis: no change/decrease of 1 stage in BKS CTB. Improvement in fibrosis by ≥ 1 stage: decrease of 1 stage in BKS CTB. No worsening of NASH: no change/increase in NAS for ballooning, inflammation, steatosis CTB. CI indicated credible interval below. BKS: scaling for fibrosis (0= none, 1= perisinusoidal/

periportal, 2= perisinusoidal, portal/ periportal, 3=bridging, 4= cirrhosis; higher scores= more DA). FAS was analysed. Endpoint was not planned in combination arms.

End point type	Primary
----------------	---------

End point timeframe:

Week 48

Notes:

[1] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is reporting statistics for the arms specified

Primary: Number of Participants Achieving Resolution of NASH Without Worsening or Improvement in Fibrosis by ≥ 1 Stage Without Worsening of NASH or Both Based on Assessment by Sponsor-Identified Central Pathologist at Week 48: Logistic Regression Model

End point title	Number of Participants Achieving Resolution of NASH Without Worsening or Improvement in Fibrosis by ≥ 1 Stage Without Worsening of NASH or Both Based on Assessment by Sponsor-Identified Central Pathologist at Week 48: Logistic Regression Model
End point description:	
Resolution of NASH: disappearance of ballooning (NAS ballooning score = 0), residual or no lobular inflammation (NAS lobular inflammation score of 0 or 1) and NAS steatosis score of 0, 1, 2 or 3. No worsening of fibrosis: no change or a decrease of at least 1 stage in Brunt-Kleiner scale compared to baseline. Improvement of fibrosis by ≥ 1 stage: a decrease of at least 1 stage in Brunt-Kleiner scale compared to baseline. No worsening of NASH: no change or no increase in NAS for ballooning, inflammation, steatosis compared to baseline. Brunt-Kleiner scale indicated scaling for fibrosis. Full analysis set included all randomised participants who took at least 1 dose of investigational product who had provided baseline data for the primary endpoint. Participants were analysed according to the treatment group they were randomised to.

Secondary: Percent Change From Baseline in Liver fat at Week 48: Bayesian Dose Response Model

End point title	Percent Change From Baseline in Liver fat at Week 48: Bayesian Dose Response Model ^[2]
-----------------	---

End point description:

Magnetic resonance imaging proton density fat fraction (MRI-PDFF) is an established method that enables quantification of fat content in the liver. Bayesian dose response model was utilised to characterise the dose response across all BID treatment groups, to estimate the posterior mean relative change from baseline (and 90% credible interval) for each BID dose studied, and to estimate the placebo adjusted posterior mean relative change from baseline for each dose (and 90% credible interval). Full analysis set: all randomised participants who took at least 1 dose of investigational product who had provided baseline data for primary endpoint. Participants were analysed according to treatment group they were randomised to. This endpoint was not planned to be analysed in combination arms. Here, "Number of Subjects Analysed" signifies participants evaluable for this endpoint.

End point type	Secondary
----------------	-----------

End point timeframe:

Baseline, Week 48

Notes:

[2] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is reporting statistics for the arms specified

Secondary: Mean Proportion of Participants Achieving Improvement in Fibrosis by ≥ 1 Stage, Without Worsening of NASH Based on Assessment by Sponsor-Identified Central Pathologist(s) at Week 48: Bayesian Dose Response Model

End point title	Mean Proportion of Participants Achieving Improvement in Fibrosis by ≥ 1 Stage, Without Worsening of NASH Based on Assessment by Sponsor-Identified Central Pathologist(s) at Week 48: Bayesian Dose Response Model ^[4]
-----------------	---

End point description:

Improvement in fibrosis by ≥ 1 stage: decrease of at least 1 stage in Brunt-Kleiner scale compared to baseline. No worsening of NASH: no change or no increase in NAS for ballooning, inflammation, or steatosis compared to baseline. Brunt-Kleiner scale included scaling for fibrosis. Bayesian dose response model was utilised to characterise the dose response across all BID treatment groups, to estimate the posterior mean relative change from baseline (and 90% credible interval) for each BID dose studied, and to estimate the placebo adjusted posterior mean relative change from baseline for each dose (and 90% credible interval). Full analysis set included all randomised participants who took at least 1 dose of investigational product who had provided baseline data for primary endpoint. Participants were analysed according to treatment group they were randomised to. This endpoint was not planned to be analysed in combination arms.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 48

Notes:

[4] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period.

Justification: The end point is reporting statistics for the arms specified

Secondary: Mean Proportion of Participants Achieving Improvement of ≥ 2 Points in Total NAS, Without Progression of Fibrosis Based on Assessment by Sponsor-Identified Central Pathologist(s) at Week 48: Bayesian Dose Response Model

End point title	Mean Proportion of Participants Achieving Improvement of ≥ 2 Points in Total NAS, Without Progression of Fibrosis Based on Assessment by Sponsor-Identified Central Pathologist(s) at Week 48: Bayesian Dose Response Model ^[6]
-----------------	---

End point description:

Improvement of ≥ 2 points in Total NAS: decrease of at least 2 points in Total NAS compared to baseline, without progression of fibrosis. No progression of fibrosis: no change/decrease of at least 1 stage in BKS CTB. Total NAS ranged from 0 to 8, was calculated as sum of scores of steatosis (0 to 3), lobular inflammation (0 to 3), ballooning (0 to 2). BKS included scaling for fibrosis. If any of sub-scale scores were non evaluable/missing, total score was derived as missing. BDRM was utilised to characterise dose response across all BID treatment groups, estimate posterior mean relative change from baseline (90% CI) for each BID dose studied, estimate placebo adjusted posterior mean relative change from baseline for each dose (90% CI). CI=credible interval and note that CI labelled as confidence intervals below. Full analysis set was analysed. Participants were analysed according to treatment group they were randomised to. Endpoint was not planned to be analysed in combination arms.

End point type	Secondary
----------------	-----------

End point timeframe:

Week 48

Notes:

[6] - The end point is not reporting statistics for all the arms in the baseline period. It is expected all the baseline period arms will be reported on when providing values for an end point on the baseline period. Justification: The end point is reporting statistics for the arms specified

Secondary: Number of Participants With Treatment-Emergent Adverse Events (TEAEs)

End point title	Number of Participants With Treatment-Emergent Adverse Events (TEAEs)
-----------------	---

End point description:

An adverse event (AE) was any untoward medical occurrence in a participant/ clinical investigational participant administered a medicinal product and which does not necessarily have a causal relationship with this treatment. Serious adverse events (SAE) was any untoward medical occurrence at any dose that: resulted in death, was life threatening (risk of death), required inpatient hospitalisation or prolongation of existing hospitalisation, resulted in persistent or significant disability/incapacity (substantial disruption of the ability to conduct normal life functions), resulted in congenital anomaly/birth defect. AEs included both serious and all non-serious AEs. TEAEs were defined as newly occurring or worsening AE after the first dose of study drug. Safety population included all participants who took at least 1 dose of investigational product. Participants were analysed according to the treatment they actually received.

More information

Substantial protocol amendments (globally)

Were there any global substantial amendments to the protocol? Yes

Date	Amendment
30 August 2021	Evaluation of 2 arms with administration of DGAT2i alone (150 mg once a day [QD] and 300 mg QD) was no longer being pursued. Those previously randomised to these 2 arms were switched in a blinded manner to receive the corresponding BID regimen that maintained the same total daily dose. Number randomised to trigger 1st safety review by E-DMC retained but proportion updated.

Notes:

Interruptions (globally)

Were there any global interruptions to the trial? No

Limitations and caveats

None reported
